□ **EM-related Websites**

Here you find **websites** related to the **EM** project with further resources and information.

Deutsche Gesellschaft fr Technische Zusammenarbeit (GTZ) GmbH - [Climate Program](#)

Information on German support for the Implementation of the Framework Convention on Climate Change, with description of projects, partners, and useful links.

World Bank, Industry & Energy Division - [EMPowerInfo](#)

Information on Environmental Impact Assessment, Energy Technologies,

Energy Modeling, Emission Control Technologies, Emission Standards, World Bank Environmental Guidelines

UNEP Collaboration Center for Energy and Environment - [GHG Mitigation Studies](#)

UN-C2E2 gives information on energy and the environment, and offers reports and guidance for greenhouse-gas analysis and mitigation, especially in Developing Countries, and useful links.

- [Identify](#)

The IDENTIFY Analysis Tool provides a means for assessing the costs and benefits of industrial greenhouse-gas mitigation strategies. The tool is

intended to be used by anyone with an interest in analyzing industrial greenhouse-gas mitigation options:

government planners, researchers, NGOs, consultants or industry managers. It walks the user through the steps needed to evaluate the greenhouse-gas emissions, energy-consumption patterns and costs of different industrial technologies (including both new plants and retrofits) by performing cost-benefit analyses of energy-efficiency and fuel-switching investments.

The tool is implemented as an Excel spreadsheet, making it easy to use but also flexible and simple to adapt to different user needs and data requirements. The user specifies information about the basic physical, cost and emissions characteristics of alternative industrial-sector mitigation options, and projects how costs might change over time. The tool includes specialized calculations for the emissions produced both by on-site fuel use and by off-site generation of electricity or production of steam.

- [Energy Division](#)

Tellus Institute Energy Group develops energy policies and strategies to achieve environmental protection, economic effectiveness, and distributional equity. Projects include technological and resource assessments, market and pricing analyses, evaluations, purchasing strategies, and energy management programs.

- [Energy, Environment and Development](#)

[Program](#)

The SEI-EE&D programme develops interdisciplinary projects that are environmentally sound and in line with principles in international agreements on sustainable development. Links to SEI projects, information sources, and useful contacts in Developing Countries.

US-Department of Energy - [Energy Efficiency and Renewable Energy Network](#)

Information on energy efficiency and renewable energy technologies, environmental impacts, clean coal technologies

International Atomic Energy Agency - [DECADES](#)

This websites offers information on the DECADES project on energy & environment which uses EM data.

For Life-Cycle Analysis, the following links are relevant:

Oeko-Institut - [TEMIS Project](#)

Information on the EM-related TEMIS model (Total Emission Model for Integrated Systems) with data for OECD countries.

- **[Climate-Friendly Industrial Technologies](#)**

This page provides linkages to UNIDO-generated climate-relevant technology information.

European Union - [LCANet](#)

Project website of EU activities on Life-Cycle Analysis, with useful links and contacts.
