    - Instruction Example 3.2.: Making of a Roof Base Facing
    - Instruction Example 3.3.: Template Making for a Rafter Foot
    - Instruction Example 3.4.: Re-proofing of Buildings

#### **Preliminary Remarks**

The present booklet contains 4 selected instruction examples which are exclusively related to eaves flashings. Making of eaves flashings requires work on site and in the workshop as well.

The Instruction Examples 3.1. and 3.2. have been selected so that practising of the examples can be done separately or successively, one based on the other one.

Instruction Example 3.3. includes the calculations necessary for making the templates required for an eaves flashing to be made on a roof structure to be built.

Example 3.4. explains the sequence of operations in template making for reproofing of buildings.

The necessary materials, machines, hand tools, measuring and testing means and auxiliary accessories are specified for each example to facilitate the preparation and execution of the work. Moreover, the previous knowledge, which is necessary in addition to knowledge of the technique Making of Roof Flashings, is also stated for each example and should be recapitulated at the beginning.

The order of working steps given in the sequence of operations is to be followed, in order to achieve good quality of work.

A working drawing showing the required shapes and dimensions is also attached to each example.

The working drawings 3.1. and 3.2. are required for the first two examples.

Making of Roof Flashing - Course: Timberwork techniques. Instruction examples for practical vocational training (Institut fr Berufliche Entwicklung, 26 p.)
(introduction...) 22/10/2011

Making of Roof Flashing - Course: Timberwork techniques....

- Preliminary Remarks
- Instruction Example 3.1.: Working of Boards for a Roof Base Facing
- Instruction Example 3.2.: Making of a Roof Base Facing
- Instruction Example 3.3.: Template Making for a Rafter Foot
- Instruction Example 3.4.: Re-proofing of Buildings

**Instruction Example 3.1.: Working of Boards for a Roof Base Facing** 

The face and bottom boards for a couple roof base facing are to be worked.

Material

Boards with tongue and groove planed on one side, board lengths between 3000 mm and 4100 mm

Making of Roof Flashing - Course: Timberwork techniques....

Hand tools and machines

Smoothing plane, circular saw bench

Measuring and testing means

Folding rule, measuring tape (if necessary)

**Auxiliary accessories** 

Pencil, work bench (working table)

Necessary previous knowledge

Reading of drawings, measuring and testing, planing, operation of the circular sawing machine, fundamental arithmetic operations

Making of Roof Flashing - Course: Timberwork techniques.... 22/10/2011 1. Determine the board length. Use attic framing drawing! - 4100 mm long boards cover 5 bays 5 • 803 mm = 4015 mm - 20 bays would be 4 board Roof base facing must cover the total length of the lengths building. Length of building = 16990 mm. 4 • 4015 mm = 16060 mm. 4 board lengths are not feasible! - Initial board Use attic framing drawing! Initial board over 3 bays. Beam distance from centre to  $3 \cdot 803 \text{ mm} + \frac{160 \text{ mm}}{2} + 20 \text{ mm}$ centre! 365 mm = 2874 mmLength selected: 3000 mm - Intermediate board 5 • 803 mm over 5 bays, = 4015 mmthree joints = 15 bays Length selected: 4100 mm Final board 2  $\cdot$  803 mm +  $\frac{160mm}{2}$  + over 2 bays, since 3 + 15 + 2 = 20 bays The difference of 929 mm is required for closing the roof base facing. 20 mm + 365 mm = 2071 mm Length selected: 3000 mm 2. Determine the board width. Consider maximum board width. - Lay out eaves flashing in scale See drawing of Instruction Example 3.2. 1:1, determine and measure the Add about 10 mm for tongue and groove to be cut off. width:

bottoeterhaardena 3 fumberwigth boards.

- Face boards: 120 mm wide
- $2 \bullet 2 = 4$  boards 3000 mm long
- $3 \cdot 2 = 6$  boards 4100 mm long
- Bottom boards: 130 mm wide
- $2 \bullet 2 = 4$  boards 3000 mm long
- $3 \cdot 2 = 6$  boards 4100 mm long
- List of boards:
- 8 boards of 3.0 m length and 12 cm width
- 12 boards of 4.1 m length and 12 cm width
- 8 boards of 3.0 m length and 13 cm width
- 12 boards of 4.1 m length and 13 cm width.
- 4. Select boards of adequate length and width in timber yard.

5. Store boards according to width at the side of the circular saw bench.

6. Saw boards to width. Board (1) 120 mm Board (2) 120 mm + tongue Use laid-out eaves flashing and determination of step 1 above.

Roof base facing is to be provided at both sides of the couple roof.

Consider surface quality, too!

Make sure that there is enough freedom to move!

Use laid-out eaves flashing. (See drawing of Instruction Example 3.2.). Think of tongue length.

22/10/2011

length

Board (3) 111 mm + tongue length

Board (4) 110 mm 7. Chamfer boards

- Chamfer boards (1) and (4) at the groove side.

- Chamfer board (2) at the tongue side.

- Chamfer board (3) at three sides and smooth visible projection.

8. Store boards for transportation.

Making of Roof Flashing - Course: Timberwork techniques....

Use stop at circular saw bench!

1 mm on board 3 is needed for smoothing of the surface.

(See drawing of Instruction Example 3.2.) Put board flat on work bench.

Maximum chamfer 3 mm. Planed side to be on top. Clamp board edgewise on work bench and plane off to 110 mm. Lay board flat and chamfer at tongue and groove sides.

Turn board over (rough side on top) and smooth visible areas.

Protect stored boards against possible damage during storage!

22/10/2011

  - Preliminary Remarks
  - Instruction Example 3.1.: Working of Boards for a Roof Base Facing
  - Instruction Example 3.2.: Making of a Roof Base Facing
    - Instruction Example 3.3.: Template Making for a Rafter Foot
    - Instruction Example 3.4.: Re-proofing of Buildings

# Instruction Example 3.2.: Making of a Roof Base Facing

The wooden beam heads projecting by 300 mm are to be covered by a roof base facing.

Material

#### **Prepared face and bottom boards**

#### Hand tools

Hammer, frame saw, wrecking bar with claw, nail punch

Measuring and testing means

Folding rule, bevel protractor

Auxiliary accessories

# Pencil, measuring rod 4015 mm long, cleat, nails 3.1/80, 2.8/70

### Necessary previous knowledge

# Reading of drawings, measuring and testing, sawing, scribing, nailing, nail punching.

1. Check the scaffolding.

Store boards on scaffolding.
 Store face and bottom board, as well as different lengths separately.

3. Cut square initial board (1) at right end.

4. Place and fasten provisionally board (1).

# 5. Scribe initial board.

#### Comments

Working direction from left to right. Stability, bracing, covering of uprights, guard rail.

Ensure freedom of movement!

Use try square. Saw off only as much as necessary to produce a square section.

Place right end of board centrically at 4th beam head.

Place cleat as stop at cross-grained end of beam head.

Fasten board provisionally on beam heads 1 and 3.

Use nails 2.8/70. Drive nails in only as deep as to permit their removal later on!

Align over\_gable wall and scribe-mark.

<sup>22/10/2011</sup> о. Таке оп пппа роага апа scripe angular line.	Course: Timberwork techniques Use a try square. Don't remove provisionally fastened nails! (Nail holes in beam heads and nails in board guarantee exact fit!)
7. Saw initial board to length.	Saw square!
8. Place measuring rod at initial board (1) ar transfer size.	nd Do it exactly!
9. Nail initial board (1).	Locate points of nails in the board in nail holes in the beam head and drive in the nails. Do not completely drive in the nail at the groove side of the board to permit insertion of the tongue of board (2).
10. Scribe and saw to length initial boards (2), (3) and (4).	Measuring rod to be placed flush. Use try square. Saw exactly square!
11. Nail initial board (2).	Insert tongue in groove of board (1) and press it in with lever pressure. Place cleat at plasterwork. Exert gentle pressure with wrecking bar. Drive in two 2.8/70 nails per beam head. Make sure it is flush with board (1).
12. Nail initial boards (3) and (4).	Insert tongue in groove of boards and place boards. Set marking gauge for projection (15 mm)

	and adjust board (3). Make sure it is flush with board (1)
13. Place measuring rod of 4015 mm length over the next beam heads and check the size.	Prize in two 3 1/80 nails per beam head. heads. Check over the entire facade.
14. Scribe and saw to length all four boards for the other joints of the roof base facing according to the checked size.	Use a try square. Saw exactly square.
15. Nail roof base facing boards.	Nail the boards joint by joint proceeding similarly as with the first joint (initital boards).
<ul><li>16. Saw square at left end and fasten provisionally final board (1).</li><li>17. Scribe length of board.</li><li>18. Take off, scribe and saw to length final board (1).</li></ul>	Use a try square. Do not drive in nails completely. Align over gable wall and scribe size. Use a try square.
<ul><li>19. Place measuring road at final board and transfer length.</li><li>20. Scribe and saw to length final boards (2), (3) and (4) according to size taken.</li></ul>	Place flush at one end. Place measuring rod parallell. Place measuring rod exactly. Use a try square. Do not let the cuttings break off when sawing off! (Cuttings are to be used for closing the roof base facing)
21. Nail final boards.	09 Consider type of nails!

Making of Roof Flashing - Course: Timberwork techniques..

Making of Roof Hashing	Course. Infiber work (cerniques
22. Close roof base facing at both ends.	Use the cuttings. Place, scribe, saw and insert the board pieces individually. Use 2.8/70 nails.
23. Nail the roof base facing.	Nail in the centre of the beam bays - through board (3) in board (1) - through eaves board in board (4). Use 2.8/70 nails.
24. Clean the work place.	Pick up wooden cuttings and clean scaffolding.

**Instruction Example 3.3.: Template Making for a Rafter Foot** 

The template for the rafter foot of a purlin roof to be built shall be made and the real rafter length be determined.

Dimensions

Width of building: 8000 mm Height of roof: 3000 mm Cross section of rafter: 80/140 mm<sup>2</sup>

- z (horizontal distance of eaves flashing) = 500 mm
- n (height of inferior purlin above surface of attic beam) = 80 mm
- o (square attachment timber) = 100 mm

Hand tools

**Frame saw** 

Measuring and testing means

Folding rule, carpenter's steel square

**Auxiliary accessories** 

Paper, pencil, hand sketch, abrasive paper, board approx. 1600 mm long and 140 mm wide

# Necessary previous knowledge

# Reading of drawings, measuring and testing, scribing, sawing, smoothing

# Sequence of operations

1. Determine real rafter length. Req.: Spl Known:  $Spl_R = b^2 + h^2$  $y = \frac{Spl_R \cdot z}{h}$  $y = \frac{8000mm}{2} = 4000mm$ h = 3000 mmz = 500 mm $Spl_{R} = (4^{2} + 3^{2}) m^{2}$  $Spl_{R} = 5000 \text{ mm}$ 5000mm · 500mm V = -4000mm y = 625 mmSpl = 5000 mm + 625 mmSpl = 5625 mm2. Determine  $x_0$ Req.: x<sub>0</sub>

#### Comments

Formula: Spl = Spl<sub>R</sub> + y (See also Fig. 16 in "Trainees' Handbook of Lessons")

# $x_0$ is the size from the inferior purlin line up to the rafter foot, **not the**

# Known: Spl<sub>R</sub> = 5000 mm z = 500 mm $z_1 = \frac{b(y_1 + n)}{h}$

$$b = 4000 \text{ mm}$$
$$y_1 = \frac{\text{Spl}_R \cdot o}{b}$$
$$n = 80 \text{ mm}$$
$$h = 3000 \text{ mm}$$
$$o = 100 \text{ mm}$$

 $y_1 = \frac{5000 \text{mm} \cdot 100 \text{mm}}{4000 \text{mm}}$ 

$$y_1 = 125 \text{ mm}$$

 $z_1 = \frac{4000mm(125mm + 80mm)}{3000mm}$ 

z<sub>1</sub> = 273.3 mm

$$x_0 = \frac{5000 \text{mm}(500 \text{mm} + 273.3 \text{mm})}{4000 \text{mm}}$$

 $x_0 = 966.6 \text{ mm}$ 

3. Put straight board of approx. 1600 mm length on Board width to comply exactly with

# length for the template!

(See also Fig. 16 in "Trainees' Handbook of Lessons") Formula:

$$x_0 = \frac{Spl_R(z+z_1)}{b}$$

work bench. 4. Scribe angular line at left end and mark with section mark.	rafter height. Use steel square. Go to the right only as far as to produce a square cut.
5. Measure in and mark the size $x_0$ from the angular line.	Scribe only thin and short line.
6. Measure in and scribe square attachment timber.	Do not scribe over the entire length but only scribe thin line in the area of the rafter foot line.
7. Mark the size $y_1$ on the long leg of the square.	Scribe thin line. Mark it at the outside of the square.
8. Place square with marked size $y_1$ at $x_0$ mark and swivel the square until point of intersection with square attachment timber is reached.	Place it exactly!
9. Scribe surface of inferior purlin and front face of inferior purlin.	Scribe a thicker line at the short leg of the square and a thin line at the long leg.
10. Scribe front face of inferior purlin.	Place long leg of square at thin line and scribe bird's mouth depth.
11. Scribe template length.	Measure from x <sub>0</sub> line. Use a square. Use maximum length but at least 500 mm!
12. Saw out template.	Saw exactly and perfectly square. Special care is required for sawing

13. Smooth cut surfaces with abrasive paper.

14. Transfer scribed lines of bird's mouth to upper narrow side of template.

the bird's mouth! Use fine-grained abrasive paper! Smooth very gently - no chamfers must be produced! Scribe thin line.

Instruction Example 3.4.: Re-proofing of Buildings

The cover straps shall be produced for re-proofing a building by displacement of the rafter foot of a purlin roof.

### Dimensions

## Cross section of roof rafter: 80/140 mm<sup>2</sup> Thickness of cover straps: 40 mm Horizontal distance of eaves flashing: 500 mm

Hand tools and machines

Frame saw, hand plane, bevel protractor, band saw

Measuring and testing means

Folding rule, carpenter's steel square, water level

**Auxiliary accessories** 

Straightedge 2000 mm long, pencil, abrasive paper, board of 140 mm width and 2000 mm length

Necessary previous knowledge

Reading of drawings, measuring and testing, plumbing (perpendicularity), scribing, sawing, curving, planing, smoothing

(1) scribed straightedge(2) board for template(3) curve of rafter foot

Sequence of onerations D:/cd3wddvd/NoExe/Master/dvd001/.../meister10.htm Comments

	Making of Roof Flashing - Course: Timberwork technic	ques	
Steps 1 to 6 are to be carried out at the building!			
1. Check the scaffolding.		Stability, bracing, covering of uprights, guard rail.	
2. Insert the straightedge betwind the straighted of the straighte	ween the roof boards and the inst the roof rafter.	e Insert it approx. 1000 mm. Make sure that it contacts the roof boards and the roof rafter.	
3. Transfer the front face of the straightedge by scribing the po	e outside wall onto the erpendicular line.	Use a water level. Check changing of water level. Mark scribing perpendicular line with "PERPENDICULAR".	
4. Transfer front face of inferio	or purlin onto straightedge.	Mark only!	
<ol><li>Remove straightedge and in rafters to check the scribed line</li></ol>	nsert it at several roof les.		
6. Count the roof rafters.		Is necessary for the number of cover straps required.	
All other steps are to be carried out in the workshop			
7. Take perpendicular line from bevel protractor.	n straightedge by means of	Working direction from left to right! Set bevel protractor tongue exactly and firmly tighten the wing nut!	
8. Put board for template (app bench and scribe on it square	rox. 2 m long) on work attachment timber.	Scribe a thin line.	

9. Scribe angular line at right end of board and mark the Go only as far as necessary to D:/cd3wddvd/NoExe/Master/dvd001/.../meister10.htm

Portige to the Measure of the mark 500 mm from angular line to the Measure of the measure of the stangular cut. left.

11. Scribe perpendicular line through marking.

12. Scribe surface of inferior purlin.

13. Take from straightedge, measure in on template and mark the size up to front face of outside wall.

14. Scribe perpendicular line through marking and mark with "FW".

15. Mark horizontal distance of eaves flashing (500 mm) at long leg of square.

16. Place tongue of bevel protractor at perpendicular line, Place square and bevel displace short leg of square at tongue so as to have point protractor tongue exact of intersection at upper edge of template board! Do not squeeze the ton

Use bevel protractor. Perpendicular line is front face of inferior purlin. Place square leg at

perpendicular line so as to have point of intersection with 8.!

Measure on 8.! Mark only!

"FW" means **f**ront face of outside **w**all.

Apply only thin marking.

Place square and bevelprotractor tongue exactly.Do not squeeze the tongue ofthe bevel protractor!Apply only thin marking.

17. Scribe template length and mark the section to be cut Use a square. off.

18. Profiling.

Scribe the curve so that it can be easily sawn out with the band saw!

Saw it out at exact angles.

20. Smooth the template with abrasive paper.

21. Measure length of cover straps and select timber for cover straps in the timber yard.

22. Transport the timber to the work bench and store it.23. Put template successively on the timber for the cover straps to be produced and scribe cover straps.

24. Saw out the cover straps.

25. Plane the visible sides of the cover strap foot.

26. Smooth curve with abrasive paper.

27. Store cover straps for transportation.

Use fine-grained abrasive paper.

No chamfers must be ground!

Number of cover straps has been counted on site.

Ensure freedom of movement.

Scribe cover straps on one side only.

Place upper edges of template and cover strap flush with each other!

Saw the curve exactly on the band saw!

Observe the safety regulations for work on the band saw!

Use a hand plane.

Just smooth-plane, remove small chip.

Use coarse-grained abrasive paper.

Store cover straps so that they cannot be damaged or get dirty.
