DBCS - EUC

Introduction

1. Scope

1.1 Abstract
This document is a registry of the IBM Japanese *Graphic Character Set* for *EUC*, in which the following are set forth:

- the repertoire of the IBM Japanese *Graphic Character Sets* for *EUC* is specified.

- each *graphic character* of the repertoire is identified by a *Graphic Character Global Identifier* (GCGID).

- five *graphic character sets*, which are the subsets of the repertoire are specified and identified by *Graphic Character Set Global IDs* (GCSGID).

- two code pages, Japanese *DBCS-EUC* JIS X 0208 Set and *DBCS-EUC* JIS X 0212 Set for the *graphic character sets* are specified and identified by *Code Page Global IDs* (CPGID).

- code translation correspondence between Japanese *DBCS-EUC* JIS X 0208 Set or JIS X 0212 Set and the related *code page*s are specified.

1.2 Objective
The objectives of this document are:

1) to make available to all developers supporting Japanese the specification of the Japanese *graphic character sets* and *code pages*.

2) to ensure consistent implementation of the Japanese *Graphic Character Sets* and *code pages* and code correspondence between Japanese *DBCS-EUC* JIS X 0208 Set or Japanese *DBCS-EUC* JIS X 0212 Set and other related code pages for *EUC*

Note: This document is one of a set of documents defined in C-S 3-3220-019, *Coded Character Sets Implementation*. The reader should be familiar with the requirements specified in C-S 3-3220-019 which describe the relationship of the documents. Note also that the requirements for compliance with this specification are described in C-S 3-3220-019.

This document does not specify Japanese *DBCS-Host* and *DBCS-PC*. They are specified in C-H 3-3220-024.

Terms in italics (except in heading) are defined in the Supplementary Information section of this document.

X'nn' or X'nnnn' represents a hexadecimal notation.

1.3 Application
This specification is applicable to all IBM products which implement the IBM Japanese *Graphic Character Set* specified in this specification and which are announced or released to production (whichever occurs first) after date of publication.

1.4 Effective Date
This document takes effect with its publication.

2. Document Administration

2.1 Originating Area and Responsibility
This document is maintained by the Standards Project Authority (SPA) for SIRS 029, (Double-Byte Character Set (DBCS)), location code 93K, Yamato.

2.2 Authorization
Publication of this document was approved by the Standards Authorities of the affected operating units.

2.3 Compliance
Compliance with the requirements of this document is recommended unless it is called out as a requirement in a standard or equivalent document. It then assumes the same compliance requirements as that document.

2.4 Property Statement
This document is the property of IBM. Its use outside IBM is authorized only for responding to a request for quotation or for the performance of work for IBM. All supplier/vendor questions must be referred to the IBM purchasing department.

Requirements

4. External Standards

4.1 The Japanese Industrial Standards (JIS)

JIS X 0201-1976, *Code for Information Interchange*, defines total 162 *coded graphic characters*, 94 Roman characters, and 63 Katakana characters based on the JIS 7-bit and JIS 8-bit code scheme.

JIS X 0202-1991, *ISO 7-bit and 8-bit coded character sets - Code extension techniques*, defines code extension techniques which are applicable to JIS X 0201, JIS X 0208 and JIS X 0212.

JIS X 0208-1990, *Code of the Japanese graphic character set for information interchange*, defines total of 6,879 characters: 2,965 First Level Kanji characters, 3,390 Second Level Kanji characters, and 524 non-Kanji characters based on the JIS 7-bit code scheme.

JIS X 0212-1991, *Code of the supplementary Japanese graphic character set for Information Interchange*, defines total 6,067 characters: 5,801 Kanji characters and 266 non-Kanji characters based on the JIS 7-bit code scheme.

4.2 Relation of IBM and JIS Character Set

4.2.1 Character Coverage. The IBM Japanese *Graphic Character Set*s for *EUC* consist of JIS X 0201-1976, JIS X 0208-1990, and JIS X 0212-1991. IBM unique extension and User Definable Characters are mapped in unassigned code area of JIS standards above.
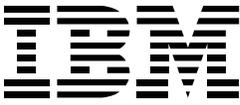

4.2.1.1 IBM selected characters. For compatibility with other IBM Japanese *coded character sets*, IBM has assigned 5 *SBCS* and 106 *DBCS* characters besides JIS standard *character sets* into unassigned code points of JIS X 0201 or JIS X 0212.

4.2.1.2 User Definable Characters. For the convenience of users, IBM has assigned 1,880 (same number as Japanese *DBCS-PC*) User Definable Characters into unassigned code points of JIS X 0208 and JIS X 0212.

4.2.2 Code Scheme. The code scheme for the IBM Japanese of *EUC* is an instance of JIS X 0202.

4.3 Relation with other standards
This document specifies *code pages* and *character sets*, in compliance with the common Japanese *EUC* (AJEC) which was agreed among Open Software Foundation, UNIX International, and UNIX System Laboratories Pacific in 1991.

5. Specification of Character Repertoire

5.1 Identification of Graphic Characters
This document specifies the repertoire of the Japanese *graphic character set*s for *DBCS-EUC*. Each *graphic character* of the repertoire is identified by a unique *Graphic Character Global ID (GCGID)*.

6. Character Sets and Code Pages

6.1 Registration of GCSGID and CPGID
This specification registers subsets of the IBM Japanese *Graphic Character Set* and identifies them by *Graphic Character Set Global Identifier (GCSGID)*.

It also specifies relevant *code page*s for those *registered graphic character set*: *DBCS-EUC* JIS X 0208 Set, *DBCS-EUC* JIS X 0212 Set and identifies them by *Code Page Global Identifier (CPGID)*.

Table 1 specifies the *GCSGID*s and *CPGID*s of the *registered coded graphic character set*s of Japanese.

The registration category "U" means "Unrestricted", which implies that *graphic character set*s and *code page*s in this category have potential broad implementation in information processing *products*.

Note: See C-H 3-3220-050 for the detail of registration categories of *graphic character set*s and *code page*s.

Table 1. Registration of GCSGID and CPGID for the IBM Japanese Graphic Character Set				
CGCSGID **GCSGID CPGID**	**Name**	**Character Set Size**	**Number of code points in code page**	**Category of Registration**
01058 00952	DBCS-EUC JIS X 0208 Set including 940 UDCs	7,819	8,836	U
01061 00952	DBCS-EUC JIS X 0208 Set	6,879	8,836	U
01059 00953	DBCS-EUC JIS X 0212 Set including IBM selected and 940 UDCs	7,113	8,836	U
01062 00953	DBCS-EUC JIS X 0212 Set	6,067	8,836	U
01060 00953	DBCS-EUC, IBM selected including 940 UDCs	1,326	8,836	U
Note: Code pages 00952 and 00953 are defined as 7-bit code pages. With the use of EUC or ISO encoding scheme, the most significant bit of each code point on the code pages may be ignored.				

IBM Japanese Graphic Character Set for Extended UNIX Code (EUC)

DBCS - EUC

6.2 Japanese DBCS-EUC JIS X 0208 Set

The *coded graphic character set* of the Japanese *DBCS-EUC* JIS X 0208 Set is structured as shown in Table 2.

Table 2. Structure of DBCS-EUC JIS X 0208 Set (G1 set)

Wards in Hex	Content	Number of Characters
A1 to A8	Non-Kanji Set • Space • Greek, Russian, Roman Numeric • Alphanumeric and Related Symbols • Katakana, Hiragana and Special Symbols	524
B0 to CF	First Level Kanji Set	2,965
D0 to F4	Second Level Kanji Set	3,390
F5 to FE	User Definable Character Area	940 *
A9 to AF	Reserved for Future IBM Assignments	

Note:
* The maximum number of user definable characters.

The specification of the Japanese *DBCS-EUC* JIS X 0208 Set is shown in Tables 6 to 11.

6.3 Japanese DBCS-EUC JIS X 0212 Set

The *coded graphic character set* of the Japanese *DBCS-EUC* JIS X 0212 Set is structured as shown in Table 3.

Table 3. Structure of DBCS-EUC JIS X 0212 Set (G3 set)

Wards in Hex	Content	Number of Characters
A1 to AA	JIS Supplementary Non-Kanji Set	1 (266)
B0 to ED	JIS Supplementary Kanji	279 (5,801)
F3	IBM Selected Non-Kanji Set	25
F4	IBM Selected Kanji Set	81
F5 to FE	User Definable Character Area	940 *
AB to AF EE to F2	Reserved for Future IBM Assignments	

Note:
* The maximum number of user definable characters.
Numbers enclosed by () are for character set 01059.

The specification of the Japanese *DBCS-EUC* JIS X 0212 Set is shown in Tables 14 to 18.

7. Code Translation Correspondence

The following code translation correspondences are defined in this specification:

- *DBCS-EUC* JIS X 0208 Set to *DBCS-PC*
- *DBCS-EUC* JIS X 0212 Set to *DBCS-PC*
- *DBCS-EUC* JIS X 0208 Set to *DBCS-Host*
- *DBCS-EUC* JIS X 0212 Set to *DBCS-Host*
- *DBCS-EUC* JIS X 0208 Set to JIS X 0208
- *DBCS-EUC* JIS X 0212 Set to JIS X 0212

IBM selected characters and User Definable Characters have an empty entry for the JIS code column in tables as they are not defined in JIS X 0208 or JIS X 0212. There are two methods for the code translation from *EUC* to JIS X 0208 and JIS X 0212:

- To map them into the reserved area for UDC defined in JIS, by ignoring the most significant bit of each code point.

- To substitute them.

IBM Japanese Graphic Character Set for Extended UNIX Code (EUC)
DBCS - EUC

7.1 Code Correspondence of Non-Kanji/Kanji Sets
In the code correspondence of Non-Kanji and Kanji Sets between Japanese *EUC* and *DBCS-Host*, logical conversion is not applicable, therefore all the code translation correspondence is shown in Tables 6 through 11 and 14 through 18.

In the code correspondence of Non-Kanji and Kanji Sets between Japanese *EUC* and *DBCS-PC*, logical conversion is applicable for most *coded characters*.

However, table driven code translation is required for 57 *coded characters* in JIS X 0208 Set (CPGID 00952) and all *coded characters* in JIS X 0212 Set (CPGID 00953). All the code translation correspondence is shown in Tables 6 through 11 and 14 through 18.

8. Format of Japanese EUC Specification
In this section, the specification of the Japanese *EUC coded graphic character set*s is provided by tables. They are formatted as illustrated in Table 4.

Table 4. Format of code corresponding table					
Line Number (Decimal)	**Graphic**	**EUC Code (Hex)**	**PC Code (Hex)**	**Host Code (Hex)**	**JIS Code (Hex)**	**GCGID**
XXXX	X	XXXX	XXXX	XXXX	XXXX	XXXXXXXX
Note: Line number in column 1 is the serial number of the listed *graphic characters* in the area for the better legibility.

Supplementary Information

13. Definition of Terms
The following terms are defined for the purposes of this document.

13.1 Product
A hardware or software unit that is individually packaged, that is marketable, and to which a type number/program number or equivalence has been assigned.

13.2 Graphic Character
A graphic symbol character, such as a numeric, alphabetic, special, Katakana or Kanji.

13.3 User Definable Character
A *graphic character* whose graphic shape is definable by users.

13.4 Graphic Character Global Identifier (GCGID)
An up to eight-character identifier assigned to each *graphic character*. See C-H 3-3220-055.

13.5 Graphic Character Set
A set of *graphic characters*, treated as an entity.

13.6 Byte
A unit of string consisting of 8 bits.

13.7 Graphic Character Set Global Identifier (GCSGID)
A 5-digit decimal identifier assigned to a *graphic character set*. See C-H 3-3220-050.

13.8 Code
A system of bit-patterns to which specific graphic or control meanings have been assigned.

13.9 Code Point
One of the bit-patterns specified by a *code*.

13.10 Code Page
A specification of *code points* for each *graphic character* in a set, or in a collection of *graphic character sets*. Within a given *code page*, a *code point* can have only one specific meaning.

13.11 Registered Code Page
A *code page* that has been registered and assigned a *CPGID*.

13.12 Unrestricted Code Page
A *registered code page* that has been approved by all affected operating units, and has been placed in the category of *"unrestricted"*.

13.13 Code Page Global Identifier (CPGID)
A 5-digit decimal identifier assigned to a *code page*. See C-H 3-3220-050.

13.14 Coded Graphic Character
A *graphic character* with its assigned *code point*.

13.15 Coded Graphic Character Set
A set of *graphic characters* with their assigned *code points*.

13.16 Registered Coded Graphic Character Set
A *coded graphic character set*, whose *graphic character set* and *code page* have both been registered.

13.17 Coded Graphic Character Set Global Identifier (CGCSGID)
A 10-digit decimal identifier consisting of the concatenation of a *graphic character set global identifier (GCSGID)* and a *code page global identifier (CPGID)*. The *CGCSGID* is also represented as the concatenation of the hexadecimal representations of the *GCSGID* and *CPGID*. See C-H 3-3220-050.

13.18 SBCS
Abbreviation of *Single-Byte Character Set*. *Single-Byte Character Set* is a *graphic character set* in which each character is represented by one *byte*.

13.18.1 EBCDIC.
Abbreviation of Extended BCD Interchange Code which is defined in C-S 3-3220-002, *EBCDIC*.

13.18.2 PC Code.
A single-*byte code page* which is primarily used in the personal computer environment. *PC Code* is based on ISO 646.

IBM Japanese Graphic Character Set for Extended UNIX Code (EUC)
DBCS - EUC

___

13.19 DBCS

Abbreviation of a *Double-Byte Character Set*. It is a *graphic character set* in which each character is represented by two *byte*s. See C-S 3-3220-102 for detail.

13.19.1   DBCS-Host. A *DBCS code page* which is mainly used in conjunction with *EBCDIC*.

13.19.2   DBCS-PC. A *DBCS code page* which is mainly used in conjunction with *PC code*.

13.19.3   DBCS-EUC. A *DBCS code page* which is mainly used with *EUC* encoding scheme.

13.20 Ward

A section of a *Double-Byte Character Set* where the first *byte*s of all of the *code point*s belonging to it are the same. A *ward* has a unique numerical value which represents the first *byte* of the *code point* belonging to that *ward.*

13.21 UNIX

An operating system developed at AT&T Bell Laboratories, and is being licensed by UNIX System Laboratories. UNIX is a trademark of UNIX System Laboratories.

14. EUC Encoding Scheme

14.1 Definition

EUC (Extended UNIX Code) is an encoding framework which was based on Japanese UNIX internal code introduced by the Japanese UNIX System Advisory Committee in the proposal entitled "Proposal to AT&T for Japanese Capability on UNIX System V" in 1985, and enhanced by AT&T Bell Laboratories for worldwide usage. The code extension scheme is defined in compliance with the ISO 2022 code extension techniques which can handle both single- and multi-byte characters concurrently. The scheme is designed to be applicable to every coded character set in each country or region in the world, as long as it is defined based on ISO 2022.

As allowed in ISO 2022, *EUC* can deal with a maximum of four character sets and corresponding code pages at the same time, without using locking shift. It permanently assigns ISO 646 (including valiants) character set to the "primary code set" (G0) and allows the assignment of country, region or user specific character set(s) to three "supplementary code sets" (G1 - G3). The encoding scheme is shown in Table 19 on page 370.

IBM Japanese Graphic Character Set for Extended UNIX Code (EUC)

DBCS - EUC

Table 19. Structure of EUC encoding framework					
Code set (*1)	**Code representation**				**associated standards**
	1 byte	**2 byte**	**3 byte**	**4 byte**	
C0 Set (*2)	000XXXXX	N/A	N/A	N/A	ISO 646
C1 Set (*3)	100XXXXX	N/A	N/A	N/A	ISO 6429
Space character	00100000 .	N/A	N/A	N/A	
Delete character	01111111	N/A	N/A	N/A	
G0 Set (*4)	0xxxxxxx	N/A	N/A	N/A	ISO 646 variant
G1 Set (*5)	1xxxxxxx 1xxxxxxx 1xxxxxxx	N/A 1xxxxxxx 1xxxxxxx	N/A N/A 1xxxxxxx	N/A N/A N/A	country/region specific
G2 Set (*5)	10001110 10001110 10001110	1xxxxxxx 1xxxxxxx 1xxxxxxx	N/A 1xxxxxxx 1xxxxxxx	N/A N/A 1xxxxxxx	country/region specific
G3 Set (*5)	10001111 10001111 10001111	1xxxxxxx 1xxxxxxx 1xxxxxxx	N/A 1xxxxxxx 1xxxxxxx	N/A N/A 1xxxxxxx	country/region specific

Note:
*1 The name of each code set is base on ISO 2022
*2 000xxxxx can have values in 00000000 - 00011111 inclusive.
*3 100xxxxx can have values in 10000000 - 10011111 inclusive.
*4 0xxxxxxx can have values in 00100001 - 01111110 inclusive.
*5 1xxxxxxx can have values in 10100000 - 11111111 inclusive.

14.2 Japanese environment

14.2.1 Common Japanese EUC

Although UNIX System Laboratories does not define any *character set/code page* assignment to G1, G2, or G3 set, a de-fact standard exists for each language. As for Japanese environment, an agreement has been made among Open Software Foundation, UNIX International and UNIX System Laboratories Pacific on Japanese *EUC* so called AJEC. Table 20 shows the character set assignment of the Japanese *EUC*.

Table 20. Common Japanese EUC (AJEC)			
G set	**Character Set**	**Bytes**	**Columns**
G0	ISO 646 Set	1	1
G1	JIS X 0208-1990 Set User Definable Characters	2	2
G2	JIS X 0201-1976 Katakana Set	1	1
G3	JIS X 0212 Set User Definable Characters	2	2

14.2.2 IBM Japanese EUC

IBM basically follows the Common Japanese EUC (AJEC) specification. However, IBM assigns IBM Extended SBCS and DBCS set into G2 and G3 of IBM Japanese EUC, to keep consistency with existing IBM Japanese *graphic character set*s. Table 21 shows the character sets assignment of the IBM Japanese *EUC*.

Table 21. IBM Japanese EUC			
G set	**Character Set**	**Bytes**	**Columns**
G0	JIS X 0201 Roman Set	1	1
G1	JIS X 0208-1990 Set User Definable Characters	2	2
G2	JIS X 0201-1976 Katakana Set IBM Extended SBCS Set	1	1
G3	JIS X 0212 Non-Kanji Set JIS X 0212 Kanji Set IBM Selected Non-Kanji Set IBM Selected Kanji Set User Definable Characters	2	2

IBM Japanese Graphic Character Set for Extended UNIX Code (EUC)

DBCS - EUC

15. History of JIS X 0208

15.1 JIS C 6226-1978

JIS X 0208, *Code of the Japanese graphic character set for information interchange*, was originally defined in 1978 as JIS C 6226-1978, in which a total of 6,802 coded graphic characters: namely 2,965 First Level Kanji characters, 3,384 Second Level Kanji characters, and 453 non-Kanji characters, were defined based on the JIS 7-bit code scheme.

15.2 JIS X 0208-1983

In 1983, JIS C 6226-1978 was amended. Items of JIS C 6226 amendment in 1983 are the following:

- Code point exchange between First level and Second level Kanji characters, 22 pairs (44 characters)

- Graphic pattern changes, 244 characters

- Addition of characters, 75 characters

As a result, JIS C 6226-1983 defined total 6,877 characters: 2,965 First Level Kanji characters, 3,388 Second Level Kanji characters, and 524 non-Kanji characters.

This standard was later re-numbered from JIS C 6226-1983 to JIS X 0208-1983.

15.3 JIS X 0208-1990

In 1990, JIS X 0208-1983 was amended, and 2 characters were added to the Second Level Kanji Set. It was corresponding to the expansion of "Kanji Characters for Personal Names" (Jinmeiyou Kanji) in 1990, which had been controlled by the Legal Ministry.

As a result, JIS X 0208-1990 defines total 6,879 characters: 2,965 First Level Kanji characters, 3,390 Second Level Kanji characters, and 524 non-Kanji characters.

16. History of JIS X 0201

16.1 JIS X 0201-1976

JIS X 0201, *Code for Information Interchange*, was originally defined in 1976, in which a total of 157 coded graphic characters: namely 94 Roman characters and 63 Katakana characters, were defined based on the JIS 7-bit and JIS 8-bit code scheme.

17. History of JIS X 0212

17.1 JIS X 0212-1990

JIS X 0212, *Code of the supplementary Japanese graphic character set for information interchange*, was originally defined in 1990, in which a total of 6,067 coded graphic characters: namely 5,801 Kanji characters and 266 non-Kanji Katakana characters, were defined based on the JIS 7-bit and JIS 8-bit code scheme.

18. Graphic Character Representation

Although character graphics are inserted as sample graphics of the *coded graphic character*s in Tables 5 to 10 and 12 to 17, a *graphic character* is independent of actual size or shape in which it may appear.

This specification does not restrict the style of font design. However, it is recommended that the font design of *graphic character*s for *product*s follow the graphic representation in this document as close as possible to avoid confusion in identification of *graphic character*s. On questions about the font design to be implemented, the Standards Project Authority for DBCS (SIRS 029) may be consulted.
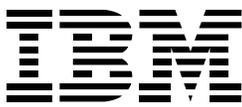

19. Consideration for Code Translation Correspondence

As described in 7.1 on page 5, there are 57 coded characters in JIS X 0208 Set (*CPGID* 00952) which require a table driven code translation when they are translated to *DBCS-PC*. Other coded characters in JIS X 0208 Set can logically be translated to *DBCS-PC*. Those 57 coded characters are listed below for the reference purpose.

Table 22. 57 Coded Characters

No.	EUC Code (Hex)	PC Code (Hex)	No.	EUC Code (Hex)	PC Code (Hex)
