

**News for mySAP Business Suite on IBM eServer zSeries
with database server DB2 UDB for z/OS and OS/390
Version 2004Q2, status of July 16, 2004**

**Actual news and information,
literature / brochures / education / documents**

Disclaimer: This is not a complete list!

It will show you the actual available information collected by me **AS IS**. I get it from several sources to give you some hints. It is my goal that you get an overview of the most important information for planning and installing mySAP on zSeries with DB2 for z/OS and OS/390 with this newsletter.

My plan is to send an updated newsletter on a **quarterly** base, hot messages excluded. Hot messages will be send immediately when there is a need to send them.

This is edition 2004Q2.

This information has been collected by
Jochen Ziegler
Consulting IT Specialist
IBM Systems Sales Technical Solutions zSeries Applications, Central Region, Germany

New: SAP System Landscape Optimization,

Author: A. Schneider-Neureither, language english,

2004, ISBN 1-59229-026-4, 220 pages

3 Additional upgrade paths now available for SAP on zSeries

Two additional upgrade paths have become available with the SAP on DB2 UDB for z/OS platform.

Since May 1, 2004 the SAP upgrade on AIX application servers and since June 1, 2004 the SAP upgrade on Linux for zSeries application servers has been available for all SAP component upgrades to the Web AS 6.20 technology and future releases.

With this, there are now four alternative upgrade platforms available for upgrades to Web AS 6.20:

- z/OS USS Application Server
- Linux for zSeries Application Server
- AIX Application Server
- Windows Application Server

For details please see SAP note 703892 for AIX and Linux for zSeries Upgrades to 6.20 for SAP on zSeries platform.

4 DB2 UDB for z/OS version 8 is available:

On 5/14/2004 SAP has released DB2 V8 for z/OS for all SAP components based on the SAP R/3 4.6 technology.

To date, the software is released for all SAP products with the SAP kernel: 4.6D.

For migration to DB2 V8 and prerequisites please refer to the SAP note: 728743

With this note SAP will keep you informed whenever additional SAP technology is enabled to run on DB2 V8.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Symptom

Introduction of DB2 V8 for z/OS running SAP systems

Other terms

zSeries, IBM, DB2 for z/OS, DB2 Connect, V8

Reason and Prerequisites

SAP releases IBM DB2 V8 for z/OS supporting SAP systems with several prerequisites. The general availability of DB2 V8 announced by IBM does not automatically imply the use of DB2 V8 with SAP systems.

After a staged verification and certification process for the different SAP releases SAP supports DB2 V8 with the corresponding SAP component releases.

Please pay attention to following notes.

Solution

The release and rollout of DB2 V8 with SAP is staged and depending from the SAP test and verification schedule. DB2 V8 is not yet available for OEM customers.

As general prereq customers need to deploy z/OS 1.4 or higher for the database server.

R/3 3.1:

prereq: SAP Kernel:

LIB_DBSL:

ICLI PTF:

release: on customer request

limitation: + no Unicode support

+ no support of a SAP installation on DB2 V8

note: 717215

R/3 4.0:

prereq: SAP Kernel:

LIB_DBSL:

ICLI PTF:

release: on customer request

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

limitation: + no Unicode support

+ no support of a SAP installation on DB2 V8

note: 717215

R/3 4.5:

prereq: SAP Kernel:

LIB_DBSL:

ICLI PTF:

release: on customer request

limitation: + no Unicode support

+ no support of a SAP installation on DB2 V8

note: 717215

R/3 4.6 and components based on it:

prereq: SAP Kernel: 1811 ff.

LIB_DBSL: 1795 ff.

ICLI PTF: OA06552 or later

release: since May 14, 2004

limitation: + no Unicode support

+ support for ST04 with RFCOSCOL only

note: 717215

Web AS 6.20 and components based on it:

prereq: SAP Kernel:

LIB_DBSL:

DB2 Connect: V8.1 FixPak 6

release: no support yet

limitation: no Unicode support

NetWeaver and components based on it (Web AS 6.40):

prereq: SAP Kernel:

LIB_DBSL:

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

DB2 Connect: V8.1 FixPak 6

release: no support yet

limitation: + support for 32 bit application servers is restricted to non-Unicode systems;

+ support for z/OS and Solaris is restricted to ABAP non-Unicode stack;

Bernhard Heininger, Development Manager at SAP AG

Release Status	Released for Customer
Released on	04.06.2004
Priority	Correction with high priority
Category	Release planning information
Primary Component	BC-DB-DB2 DB2 for OS/390
Secondary Components	BC-OP-S390 IBM OS/390, z/OS (incl. IBM JVM on OS/390 and z/OS)

**News for mySAP Business Suite on IBM eServer zSeries
with database server DB2 UDB for z/OS and OS/390
Version 2004Q2, status of July 16, 2004**

1.8 New SAP Note 717215 (V3)

DB2 V8 configuration for SAP Rel. <= 4.6D, released june 17, 2004

SAP Note Number: 717215

DB2/zOS: DB2 V8 configuration for SAP rel. <= 4.6D

Version: 3, Note Language: EN, Released on: 17.06.2004

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Symptom

A DB2 for z/OS subsystem that hosts an SAP system on release <= 4.6D is to be migrated from V7 to V8.

Other terms

DB2 z/OS V8 Migration Upgrade ZPARM, System Parameter BIND

Reason and Prerequisites

Solution

As DB2 V8 introduces many enhancements that benefit SAP systems, some of the recommendations for DB2 system parameters that were given in the documentation "SAP R/3 on DB2 for OS/390 and z/OS: Planning Guide" of the respective SAP release need to be adapted and complemented by additional recommendations.

This note summarizes the system parameters with new value and setting recommendations for DB2 V8, as well as new BIND options. The Planning Guide recommendations for the system parameters that are not mentioned here are still valid. SAP Note 390016 contains the recommendations for system parameters that only apply to SAP BW systems. We recommend that you keep system parameters set to their default values if not otherwise stated in this SAP Note or in the Planning Guide of the respective release.

This note does NOT apply to SAP WebAS 6.10 and higher. See the "SAP Web AS 6.40: IBM DB2 UDB for z/OS - Database Administration Guide" for the system parameter recommendations for DB2 V8 and SAP WebAS 6.10, 6.20 and 6.40.

Highly Recommended Parameters with New Value Recommendations for DB2 V8:

- MGEXTSZ: YES
- SMFSTAT: 1,3,4,5,6 (DB2 V8 default)

Recommended Parameters with New Value Recommendations for DB2 V8:

- EDMPOOL: 32768 KB (DB2 V8 default)
- EDMSTMTC: 300 MB
- MAXKEEPD: 8000
- DSMAX: 10000 (DB2 V8 default)
- LOGAPSTG: 100 MB (DB2 V8 default)
- MLMT: 4 GB
- CHKFREQ: 10 (minutes)

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

- LRDRTHLD: 10
- ACCUMACC: NO (only applies to SAP releases 3.1I - 4.6B)

Buffer Pool Setting Recommendations for DB2 V8:

- BP0 (catalog): VPSIZE=2000, VPSEQT=50, DWQT=10, VDWQT=0
- BP1 (work files): VPSIZE=15000, VPSEQT=100, DWQT=50, VDWQT=10
- BP2 (4 KB TS): VPSIZE=60000, VPSEQT=50, DWQT=30, VDWQT=5
- BP3 (index spaces): VPSIZE=90000, VPSEQT=40, DWQT=30, VDWQT=5
- BP4 (VB protocol): VPSIZE=1000, VPSEQT=10, DWQT=70, VDWQT=50
- BP8K0 (8 KB TS): VPSIZE=3000, VPSEQT=50, DWQT=30, VDWQT=5
- BP16K0 (16 KB TS): VPSIZE=3000, VPSEQT=50, DWQT=30, VDWQT=5
- BP32K (32 KB TS): VPSIZE=5500, VPSEQT=50, DWQT=30, VDWQT=5

We recommend that you allocate the maximum amount of real storage available for the buffer pools.

You should ONLY consider using the buffer pool attribute PGFIX=YES if sufficient real storage is available.

DB2 V8 BIND Options That Affect SAP Systems

DB2 V8 introduces a new BIND option REOPT(ONCE), which defers the preparation of SQL statements until the first set of values for parameter markers are available. For SAP releases ≥ 6.10 it is recommended you specify REOPT(ONCE), because this option enables the DB2 optimizer to select a better access path in some cases. However, if the EXPLAIN statement is invoked providing the statement text, it returns access path information that does not take the first set of parameter marker values into consideration. Since SAP always calls EXPLAIN with statement text in SAP releases $\leq 4.6D$, it is not recommended that you use BIND option REOPT(ONCE) for these SAP releases.

**News for mySAP Business Suite on IBM eServer zSeries
with database server DB2 UDB for z/OS and OS/390
Version 2004Q2, status of July 16, 2004**

**1.9 Update of SAP Note 703892 (V15),
Upgrade to 6.20 on AIX and zLinux, updated june 08, 2004**

**SAP Note Number: 703892
DB2/390: Upgrade to 6.20 on AIX and zLinux**

Version: 15, Note Language: EN, Released on: 08.06.2004

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Symptom

The note describes how to perform an upgrade to SAP 6.20 products on an AIX and zLinux application server.

Other terms

DB2 UDB on OS/390 OS390 AIX zLinux

Update, upgrade, release upgrade, release, maintenance level

Reason and Prerequisites

The following target releases are supported: BW 3.1, EBP 3.5SR1, R/3 4.7SR1, CRM 4.0/SRM 4.0, SCM 4.0, R/3 4.7 ExtSet 2.0 and CRM 3.1SR1.

Solution

Proceed as follows:

1) Read the DB2/390 specific upgrade note (see SAP notes listed below) and use the standard UNIX Upgrade Guide during the upgrade. You can ignore the comments that are directly related to the z/OS operating system (i.e. the iconv conversion of the ua.jar package before starting the Upgrade Assistant server). Otherwise, the actions to be taken are pretty much the same as on z/OS.

2) Call PREPARE in UNIX directory on the upgrade CD:

```
<UPG-CD>/UNIX/PREPARE upgdir=<DIR_PUT>
```

It finishes with the message:

```
Attention  
=====
```

```
The upgrade on DB2 for OS/390 and z/OS with  
operating system AIX/Linux is currently not supported.
```

3) Exchange <DIR_PUT>/bin/R3up by the latest version of the AIX or zLinux 620/6-R3up from SAP Service Marketplace (<http://service.sap.com> -> Software Distribution Center/swcenter -> support packages and patches).

4) If you want to use the Upgrade Assistant (UA) server, unpack the respective SAR-Archive into the upgrade directory <DIR_PUT> using:

```
<UPG-CD>/UNIX/AIX_64/SAPCAR -xvf <UPG-CD>/DATA/UA620.SAR
```

If there is no SAPCAR executable in directory <UPG-CD>/UNIX/AIX_64, download it from SAP Service Marketplace or use the one located in the kernel directory of the source system.

Subsequently, start the UA server via

```
cd <DIR_PUT>;  
java -cp ua/ua.jar UaServer
```

5) Start PREPARE (via Upgrade Assistant or with 'bin/R3up check')

and run to dialog:

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Supply the following information:
Confirm the name of your SAP system:
SAP SYSTEM ID =

in phase INITPUT_PRE.

6) The files CONF_NEW.LST, CONF_UPG.LST and CONF_PRE.LST located in directory <DIR_PUT>/bin need to be modified. Remove the character '#' from the entries

```
# "AIX" "5.1" "5.1" "DB2forOS/390" ...
# "Linux" "" "" "DB2forOS/390" ...
```

close to the end of the CONF_*.LST files.

7) Continue phase INITPUT_PRE.

The input in this phase is slightly different from the z/OS case described in the UNIX Upgrade Guide. After the specification of the parameters for the JCL submission service you have to provide the following parameters:

- Port number for the 6.20 ICLI server
- User that starts the ICLI server
- High Level Qualifier for 6.20 ICLI-PTF
- Stop and start options for the ICLI server
- Port number for the 4.6D ICLI server (only start releases <= 4.5B)
- Installation options for SAP software components running on z/OS (saposcol, rfcoscol)

8) Continue with PREPARE and upgrade.

SAP Kernel: SAP Web AS 6.40 ff.

SAP J2EE: SAP J2EE 6.30 SP 5 ff.

B) Migration scenarios for DB2 V8

It is important that Database Administrators at customer sites are familiar with the DB2 V7 to DB2 V8 migration process. A good place to start with is the "DB2 V8 Release Guide" and the related documentation and education material referenced there. SAP also offers a "Best Practices" Guide for the migration to DB2 V8. The DB2 V8 migration process is performed in stages.

1. Customers who already run a SAP solution migrate DB2 from version 7 to version 8 into DB2 V8 "Compatibility" mode. For SAP solutions this is a temporary stage and only supported as a runtime environment. SAP system installation, component add-on or system upgrades are not supported in this mode.

2. SAP NetWeaver components need several new functions of DB2 V8 and, therefore, require DB2 V8 to run in "New Function" mode.

New installations start using DB2 V8 in this mode.

This is also the final stage of the DB2 migration process from version 7 to version 8. There are no restrictions for SAP solutions when running on DB2 V8 in "New Function" mode.

Note: The DB2 migration process passes through an intermediate step to move from "Compatibility" mode to "New Function" mode, which is called "Enabling New Function" mode. This stage is very short and not enabled for SAP systems to be online. It is not allowed to run SAP systems when passing through this intermediate stage.

C) Application Servers for SAP NetWeaver

Based on the requirements that come with SAP NetWeaver the SAP application server on z/OS will support only specific services:

- + High Availability features like SAP Enqueue and Replication Server
- + Gateway and connectivity server

Application servers on z/OS do not run:

- any SAP Java application server component
- any SAP Unicode component

Application servers with 32-bit architecture like Windows do not run:

- SAP Unicode components

Note: Current SAP applications running on the SAP ABAP VM (non-Unicode) like ERP components are still supported with the application server on z/OS.

Application servers on AIX, Linux for zSeries and Windows fully support the new technology.

D) DB2 V8 and DB2 Connect Rollout

Once DB2 V8 is generally available on the market SAP certifies the new database version together with DB2 Connect to run with SAP components. After the certification the rollout to customers will happen in a staged approach.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Stage 1:

DB2 V8 is launched for R/3 4.6 based SAP solutions. In this case customers may decide at any time to migrate to DB2 V8. No action needs to be taken to run SAP software. An update of the CCMS programs is recommended to benefit from all monitoring information of DB2 V8.

Stage 2:

SAP releases the SAP NetWeaver components (BW, MI, WAS, XI) with DB2 V8. Only then customers can install SAP NetWeaver on zSeries. EP and MDM will not be available with the first NetWeaver release.

Stage 3:

SAP starts to release Web AS 6.20 based SAP solutions currently being shipped in parallel to the NetWeaver rollout on DB2 V8. The components will be enabled sequentially with the most important ones first. From then on customers may decide to migrate to DB2 V8 with their production systems at a schedule that convenes each individual customer. Solutions running DB2 V7 with ICLI connectivity are migrated to DB2 V8 with DRDA connectivity.

There is no SAP upgrade necessary, however, the most recent SAP kernel needs to be applied and DRDA needs to be switched on (parameter setting).

**News for mySAP Business Suite on IBM eServer zSeries
with database server DB2 UDB for z/OS and OS/390
Version 2004Q2, status of July 16, 2004**

**1.11 Update of SAP Note 710408 (V4),
Prerequisites for Kernel 6.40 with WAS 6.10 / 6.20,
updated june 07, 2004**

**SAP Note Number: 710408
DB2-z/OS: Prerequisites Kernel 6.40 with WAS 6.10, 6.20**

Version: 4, Note Language: EN, Released on: 07.06.2004

Symptom

Kernel 6.20 shall be replaced by downward compatible kernel 6.40.

Are there any changes in OS/DB requirements ?

Reason and Prerequisites

Kernel 6.20 is running out of maintenance by September 2005.

Solution

If you want to run SAP Web AS 6.10, 6.20 with kernel 6.40 the prerequisites according to 407325 remain unchanged.

Since z/OS 1.2 is running out of service at IBM in October 2004 and z/OS 1.3 in March 2005 it is strongly recommended to upgrade the operating system to z/OS 1.4 before the respective dates.

Also, it is recommended to upgrade your database to version 7.

SAP Web AS 6.40 requires DB2 V8 and z/OS 1.4 on the database server.

For more details please see note 660528.

SAP PRESS

220 S., 2004, geb.
79,95 Euro, ISBN 1-59229-026-4

Rapid ROI by use of efficient systems

Optimization of architecture, business processes and support

Including first-hand information on NetWeaver system landscapes

This reference book serves as an essential collection of insights, procedures, processes and tools that help you unlock the full potential of your SAP systems. First, hit the ground running with a detailed introduction to SAP NetWeaver and the mySAP Business Suite. Then, elevate your mastery of key concepts such as system architecture, security, Change and Transport Management, to name just a few. All of the practical advice and detailed information provided is with a clear focus on helping you guide your team to achieve a faster return on investment.

The authors place a strong emphasis on architecture, software, service and support, as well as solution management -- each of which is thoroughly examined. Readers will also acquire an extensive understanding of concepts related to the optimization of key business processes by learning about performance, System Landscape Optimization (SLO), Workflow/WebFlow, and much more. This indispensable and easy-to-read guide can be consulted again and again.

3 Additional upgrade paths now available for SAP on zSeries

**News for mySAP Business Suite on IBM eServer zSeries
with database server DB2 UDB for z/OS and OS/390
Version 2004Q2, status of July 16, 2004**

Two additional upgrade paths have become available with the SAP on DB2 UDB for z/OS platform.

Since May 1, 2004 the SAP upgrade on AIX application servers and since June 1, 2004 the SAP upgrade on Linux for zSeries application servers has been available for all SAP component upgrades to the Web AS 6.20 technology and future releases.

With this, there are now four alternative upgrade platforms available for upgrades to Web AS 6.20:

- z/OS USS Application Server
- Linux for zSeries Application Server
- AIX Application Server
- Windows Application Server

For details please see SAP note 703892 for AIX and Linux for zSeries Upgrades to 6.20 for SAP on zSeries platform.

4 DB2 UDB for z/OS version 8 is available:

On 5/14/2004 SAP has released DB2 V8 for z/OS for all SAP components based on the SAP R/3 4.6 technology.

To date, the software is released for all SAP products with the SAP kernel: 4.6D.

For migration to DB2 V8 and prerequisites please refer to the SAP note: 728743

With this note SAP will keep you informed whenever additional SAP technology is enabled to run on DB2 V8.

49,90 Euro, ISBN 3-89842-508-8

Service-orientierte Software: Bausteine für die Zukunft Ihres Unternehmens

Dieses Buch stellt Ihnen SAPs Zukunftsmodell für service-orientierte Geschäftsapplikationen auf Basis von SAP NetWeaver vor. Mit der Enterprise Services Architecture (ESA) beschreibt die SAP ein Konzept, das in seiner Tragweite dem Entwurf der Three-Tier-Architektur Anfang der Neunziger Jahre um nichts nachsteht: So wird es in Zukunft keine monolithischen Großanwendungen mehr geben, sondern handliche Einzelapplikationen pro Geschäftsprozess (im Fall von SAP: xApps), die sich – basierend auf Webservice-Standards – miteinander austauschen und vernetzen.

Das Buch erläutert ausgehend vom Grundkonzept der ESA, welche Leistungen service-orientierte Applikationen erbringen können und wie der Business Case für ESA-Anwendungen aussieht; es erläutert den Aufbau dieser Applikationen und die Anforderungen an die Plattform, auf der sie laufen. Schließlich erfahren Sie, wie Sie auf sanfte Art damit beginnen können, die IT Ihres Unternehmens Stück für Stück mit service-orientierten Applikationen umzubauen.

Enterprise Services Architecture

By Dan Woods

September 2003

Enterprise Services Architecture outlines a disciplined and structured approach to understanding how today's enterprise applications will make use of web services. This book, aimed at senior management and IT professionals, presents a forward-looking architecture that can meet future development challenges with ease and agility. This book was commissioned by SAP and will be used by SAP to promote their products. We're making it available through our retailers because we believe the information in it is of interest to readers outside of SAP's immediate sphere.

Practical solutions to streamline 24/7 operations Advice to conquer your biggest change management challenges Service Level Agreements, disaster recovery, security and more.

With system landscapes becoming increasingly more complex, administering them efficiently is proving equally difficult. This unique new book provides you with concepts and practical solutions that will enable you to optimize your SAP operations. Get in-depth information to set up a viable Standard Operation Environment (SOE) for SAP systems, as well as time-saving tips for certification and validation of your system landscape. Plus, benefit from and customize the numerous examples and case studies extracted from the worldwide operations of many large SAP customers.

Take advantage of proven solutions, exclusive tips, and practical examples that enable you to better organize your SAP operations. Learn to streamline 24/7 operations, exploit Service Level Agreements (SLAs), conquer change management challenges, and tackle disaster recovery and security concerns with confidence. You'll also discover expert training recommendations for the management of IT processes. Plus, read about real-world, cross-industry customer insights on the pros and cons of outsourced solutions for your system operation tasks. Although SAP System Operations primarily focuses on SAP systems, you can apply many of the principles found in this indispensable reference book to other ERP and mission-critical software solutions.

Spezialwissen für die Branche

Dieses Buch beschreibt erstmals detailliert und praxisnah die neue Gesamtbankinfrastruktur der SAP sowie die darauf aufbauende IAS-Lösung und Basel II-Lösung. Ausgehend von den komplexen betriebswirtschaftlichen Grundlagen und Anforderungen wird Ihnen die Konzeption und Architektur dieser umfangreichen Software, die Applikationsnutzung, das Customizing und die Administration bis hin zur programmiertechnischen Integration und Erweiterbarkeit erläutert. Der modulare Aufbau nach Themen und Interessensschwerpunkten ermöglicht Ihnen einen punktgenauen Informationsgewinn. Ob Sie nun Manager, Mitarbeiter aus der Fachabteilung, Berater oder Administrator sind, das Buch leistet Ihnen wertvolle Hilfestellungen.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

mySAP with DB2 V7 - Overview

DB2 V7 is ready (since November 12, 2001) for mySAP on zSeries:

1. It's certified by SAP (SAP Notes 392194 & 450752)
2. New Product Structure for DB2 V7 (Base and Utilities)
3. Many new DB2 V7 functions with benefits for SAP on zSeries (SAP Note 457512)
4. Migration offerings from DB2 V5/V6 NALC & E-NALC to DB2 V7 are available
5. New terms and conditions for DB2 OEM license via SAP are in place

1. It's certified by SAP DB2

After a formal verification process of the functionality and quality of the new DB2 database release with regard to the SAP environment and its products SAP supports DB2 UDB for zSeries V7. The release level of DB2/390 is V7.1.

The software is released for all SAP products with the SAP kernels:
6.20, 6.10, 4.6D, 4.5B, 4.0B_COM and 3.1_COM.

With Version 7, it has become mandatory for customers to include either the IBM DB2 Operational Utilities product or the IBM DB2 Utilities Suite product and apply it along with the DB2 product in order to run or continue to run SAP systems.

For migration to DB2 V7 and prerequisites
please refer to the SAP notes 392194 & 450752

2. DB2 V7 Product Structure

**DB2 UDB for OS/390® and z/OS Version 7 (5675-DB2)
includes database functions only without utilities**

For mySAP usage you mandatory need:

DB2 Utilities Suite (5697-E98) or DB2 Operational Utilities (5655-E63)

DB2 Utilities Suite (5697-E98) includes

- a) DB2 Operational Utilities (5655-E63)
- b) DB2 Diagnostic and Recovery Utilities (5655-E62)

Additional helpful tools are:

DB2 Performance Expert (5724-B92) which combines functionality of former DB2 Performance Monitor, DB2 PM, (5655-E81) and DB2 Buffer Pool Analyzer

DB2 Automation Tool (5697-G63) instead of former DB2 Administration Tool (5655-E90)

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

3. DB2 V7 functional benefits for mySAP on zSeries

DB2 V7 includes many new features. They are described in details in DB2 V7 library. As DB2 is a general purpose database management system the DB2 library does not contain specific references to SAP. This note presents all the DB2 V7 features that are particularly relevant in SAP environments and provides SAP-specific usage considerations. The material presented here is not meant to be used in isolation but to complement the general DB2 V7 library which remains the main reference source.

The DB2 V7 features that are relevant for SAP can be categorized as follows.

- Continuous availability:
- Avoiding data sets renames in REORG switch phase
- More concurrent REORG through execution scope timeout value and drain retry
- Faster reorganization for partitioned tablespaces
- Online modification of system parameters
- 'Light' restart for faster retained lock resolution and shorter failover times
- Faster log-only recovery through more frequent HPGRBRBA updates
- Virtual storage monitoring for avoiding inefficient memory over-allocation
- Database administration
- Correlation of DB2 cached statements and ABAP source statements
- Precise identification of ABAP statements involved in timeouts and deadlocks
- Real time statistics for easy and inexpensive detection of database objects needing some DBA intervention
- New reorganization indicators
- Enhanced detection of long running non committing units of recovery
- Improved database growth monitoring via RUNSTATS history
- New monitoring indicators for faster identification of potential tuning or problem areas
- Full utility toleration of DEFINE NO tablespaces and indexes
- Performance and scalability
- Reduced lock contentions through a new locking semantics
- Faster insert processing through asynchronous preformatting
- Faster insert, update, delete processing through improved log write performance
- Row level locking for selected catalog tables
- Faster query execution through FETCH FIRST n ROWS
- Removed deadlocks at parallel insert
- Faster BW queries via UNION in views

A more detailed description can be found in SAP NOTE 457512.

Symptom

Course offering for SAP on DB2 for z/OS - planned classes in 2004

Other terms

Courses Classes Workshops R/3 on S/390 zSeries information

Solution

The information in this note does not replace any official information provided by the education centers, and available on their according web pages like the following:

<http://www.ibm.com/services/learning>

<http://www.ibm.com/services/learning/us/>

<http://www.ibm.de/bildung>

<http://www.ibm.com/services/learning/ca/> (Canada)

There may exist additional web pages, international or country-specific ones. The information here is only a summary from different sources.

As soon as a web page is available which offers an overview of the SAP on DB2 for z/OS classes, this will be the source that you will have to refer to. Only the web page will then be referenced here.

Restriction:

Please be aware that this overview may not be complete, and that courses may be cancelled or added at any time somewhere in the world, and this may not be reflected here!

Therefore please always check with the IBM Education Centers, or on the appropriate web pages for the most current information.

This note does not imply that these classes will actually take place, since this depends on various factors.

ALWAYS verify if these are the most actual offerings.

All details, like course description, duration, language, etc may vary and must therefore be checked!

Use this overview as a guideline, but not as the only source of education information.

Abstracts of some courses:

Course Code: ES120

Introduction to SAP R/3 for OS/390

Overview

Learn the basic architecture and concepts of Systems, Applications, Products in Data Processing (SAP) R/3 implementation in an OS/390 environment. Gain information on SAP R/3 for OS/390 as well as an overview of the DB2 for OS/390 considerations.

Audience

System programmers for OS/390 and AIX, database administrators, and Information Technology (IT) management.

Educational Objectives

- Describe the SAP R/3 architecture for using DB2 on OS/390
- Identify the implementation concepts of SAP R/3 for OS/390
- List the benefits of SAP R/3 on OS/390
- List the hardware and software requirements for SAP R/3 on OS/390
- Understand the performance considerations
- List the available maintenance and service strategy
- Identify the security aspects of using DB2 for OS/390 with SAP R/3

Topics

- Benefits of SAP R/3 for OS/390
- SAP R/3 for OS/390 Implementation Architecture
- System Management Considerations
- Security
- Maintenance, Support and Service

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Prerequisites

Basic knowledge of SAP R/3 and OS/390.

Remarks

This course is intended for customers with either S/390 or zSeries servers and is part of the OS/390 and z/OS curriculum.

General Offering Information

- Country Offering Code: **ES120**
- WW Course Code: **ES12**
- Duration: **2.00 DAYS**
- Delivery Method: **CLASSROOM**
- Sub Delivery Method: **NON-LABORATORY**
- Media Description: **CLASSROOM NON-LABORATORY**
- Language: **ENGLISH**

**News for mySAP Business Suite on IBM eServer zSeries

Course Code: ES140

Implementing SAP R/3 in OS/390

Description

Overview

- Topic 1 - SAP R/3 System Architecture Overview
- Topic 2 - SAP R/3 in OS/390 Implementation Concepts
- Topic 3 - DB2 Architecture Overview
- Topic 4 - Installation prerequisites
- Topic 5 - Installation Planning
- Topic 6 - Implementation Process
- Topic 7 - DB2 Utilities and Online reorg
- Topic 8 - Backup and Recovery
- Topic 9 - Changing the Database Layout and Storage Management
- Topic 10 - Database Monitoring and Performance Tuning
- Topic 11 - High availability

Audience

- OS/390 System Administrator
- Technical Oriented IT Management
- Project Team Leader

Educational Objectives

After completion the student should be able to:

- Write an Implementation plan of SAP R/3 on OS/390
- Set up the environment for SAP R/3 on OS/390
- Discuss the connectivity between AppServer and DB Server in detail
- Understand the installation process of SAP R/3 on OS/390
- Perform back up and recovery
- Perform monitoring and tuning

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

- Perform storage management and online reorg

Prerequisites

Students should have overview knowledge, as taught in the follow course:

SAP R/3 with DB2 for OS/390 - Introduction (ES120)

Machine Requirements

Student Guide and Reference Material, as distributed in the class

Remarks

This course is intended for customers with either S/390 or zSeries servers and is part of the OS/390 and z/OS curriculum.

Technical Core Competence for SAP R/3 on DB2 for OS/390

Description

Overview

Learn to handle the individual tasks of Systems, Applications, Products in Data Processing (SAP) R/3 administration in the OS/390 environment, and be introduced to all of the SAP R/3 administrative activities. Reinforce concepts discussed in lecture in hands-on labs with a SAP R/3 for DB2 on OS/390 system. Hands-on lab projects may be done in teams depending on number of attendees and location.

Audience

SAP R/3 administrators, DB2 administrators, and SAP R/3 project teams.

Educational Objectives

- Understand the SAP R/3 environment for DB2 and OS/390
- Identify SAP R/3 administration tasks
- Understand operations of the SAP R/3 environment

Topics

- SAP R/3 on DB2 for OS/390 overview
- Installation
- Starting and stopping R/3
- SAP profiles
- Operation modes
- Authorization and user administration
- Background processing

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

- Spool and printing
- Archiving R/3 documents
- Online service system
- Error analysis
- Work load analysis

Prerequisites

You should complete:

- *Implementing SAP R/3 to use DB2 for OS/390 (ES140)*

and basic OS/390 and DB2 courses, **or** have a basic knowledge of OS/390, DB2, and a fundamental understanding of SAP R/3 on DB2 for OS/390 environment.

Remarks

This course is intended for customers with either S/390 or zSeries servers and is part of the OS/390 and z/OS curriculum.

SAP R/3 on DB2 for OS/390: Database Administration

Description

Overview

- Introduction
- Storage Monitoring and Management
- Performance Monitoring and Tuning
- Backup and Recovery
- Configuration and Maintenance
- Troubleshooting

Audience

Project teams, R/3 System administrators, Database administrators

Educational Objectives

- Explain how SAP R/3 data structures are mapped to DB2 objects
- Perform the most important storage monitoring and management tasks
- Enhance database administration skills using R/3 DBA transactions
- Analyze performance- critical system components
- Explain DB2's performance-critical components
- Take actions that improve performance on the database server
- Understand the need for a backup strategy and monitor backups in the R/3 system
- Perform all necessary maintenance procedures and daily administration tasks
- Follow a basic troubleshooting methodology

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

- Detect and handle performance bottlenecks and common platform specific errors

Prerequisites

- Profound knowledge of the OS/390 operating system and the DB2 for OS/390 database management system.

SAP R/3 Technical Core Competence OS/390 (ES390)

Machine Requirements

Course Guide

Remarks

This course is intended for customers with either S/390 or zSeries servers and is part of the OS/390 and z/OS curriculum.

The course material is owned by SAP under course code BC530.

SAP R/3 Technical Consultant Training - UNIX - DB2/390

Description

Overview

- R/3 Basis Technology (similar to course SAP50)
- R/3 Implementation Planning for R/3 System Management (similar to course BC040)
- R/3 Installation (similar to course PABC91)
- Technical Core Competence (similar to course BC390)
- Advanced R/3 System Management (similar to course BC305)
- Workbench Organizer & Transport System, System Upgrade (similar to course BC325)
- mySAP Workplace (similar to course BC350)
- Workload Analysis (similar to course BC315)
- Data Base Administration (similar to course BC530)

Contents may be changed due to changes in the certification test

Audience

Future Basis Consultants, experienced system administrators, experienced database administrators

Educational Objectives

Course participants receive comprehensive expert-level training in R/3 System Management. The course prepares participants for the "SAP R/3 Certified Technical Consultant" test.

Prerequisites

- In-depth knowledge of the OS/390 and UNIX operating system

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

- In-depth knowledge of the DB2 database
- Knowledge of TCP/IP network administration Note

Machine Requirements

Hand-outs, as distributed in the class

Remarks

- course language will be English
- SAP lists this course under their number PABC39
- The training course does not include the installation of an actual system
- We recommend that you bring a laptop with CD-ROM drive to review self-study course contents after training hours and over weekends
- On the last day of the course, participants will have the chance to take the "SAP R/3 Certified Technical Consultant" test. The test fee is included in the course fee.

IBM INFO APAR II11352 / SAP R/3 Note 138906

InfoAPAR II11352 has been created by the Boeblingen lab to act as communication vehicle for important new technical information for R/3 on OS/390. This APAR will be updated regularly. Please have a look on regularly base on to this APAR. It is also available as SAP R/3 NOTE (138906). Attached please find the actual version 73 of june 22, 2004 of this SAP Note.

PS: For those who are not familiar with APARs: you need access to the IBM RETAIN system to access APARs.

SAP Note Number: 138906

DB2/390: Planning Info (release,connectivity matrix)

Version: 73, Note Language: EN, Released on: 22.06.2004

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Symptom

Information APARs II11352 and II12111 in IBM's RETAIN system provide information on current and planned SAP on DB2 for z/OS and OS/390 releases concerning communications protocol options and dependencies from z/OS or OS/390 releases, AIX releases, and DB2 versions.

Other terms

release matrix, planning information, z/OS, OS/390, ICLI, AIX, DB2,

II11352

Reason and Prerequisites

N/A

Solution

Please note that Informational APARs II11352/II12111 in the IBM RETAIN system are the master source of this note.

This SAP note contains a copy of the information in APARs II11352 / II12111 (make sure that this information is on the same level as there)

SAP R/3 ON DB2 FOR OS/390 MISC INFO AND INDEX TO OTHER APARS

SAP R/3 ON DB2 FOR OS/390 MASTER INFO SOURCE; DB2/390
Applicable to all releases of ICLI client and server

This APAR applies to SAP on DB2 for OS/390 and z/OS users only

The purpose of this APAR is to act as the master information source for SAP on DB2 for OS/390 and z/OS. It contains information on supported or planned release combinations, service recommendations, and more.

II11352: (last updated June 22, 2004 cgg)

II12111: (last updated June 22, 2004 cgg)

Contents

1. Overview
2. Operating System and DB2 release matrix as avail. or planned
3. Recommended service level
4. Miscellaneous information, for example, documentation
5. Cross reference to related informational APARs --> II12111
6. Hardware requirements

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

1. Overview

This APAR gives an overview on supported

- z/OS and OS/390 releases,
- DB2 versions, and
- AIX, Linux, NT, Solaris, and z/OS or OS/390 releases for the application server

as they are currently available or planned in future.

All information contained in this APAR is preliminary as long as the product is not released or as long as the particular release combination is not yet supported by SAP.

The information is subject to change without further notice.

The APAR may also be used as master index or cross reference to other information APARs interesting for SAP on DB2 for OS/390 and z/OS.

It will be updated on a continuing basis.

If there are any differences between the information in this APAR and the official support statements from SAP as spelled out in the according SAP notes, the information in the SAP notes should be considered more recent.

For detailed planning and preparation information see the IBM documentation "SAP R/3 on DB2 UDB for OS/390 and z/OS: Planning Guide" as well as the "SAP R/3 on DB2 for OS/390: Connectivity Guide".

2. Operating system and DB2 release matrix as currently available or planned (last update May 26, 2004):

Note that this information is preliminary as long as the products are not released, or as long as the particular release combination is not yet supported by SAP. Therefore this information is subject to change without further notice.

The matrix reflects the plans as of the date shown above, and it does not say anything about the point in time when the planned support of any of the items will actually be available.

Check in SAP's SAPNet Web Frontend (previously known as Online Service System) which database (DB) and operating system combination have already been released.

You can find the DB2/390 release notes by searching for component XX-SER-SWREL and text containing the string "390".

For currently available releases, the SAP note numbers are:

80625	R/3 3.0x/3.1x on DB2/390
85844	R/3 4.0x/4.5x on DB2/390
156554	R/3 4.6x on DB2/390
407325	SAP Web Application Server 6.x on DB2/390

For your own planning take into account SAP's maintenance finish dates as well as discontinuance of service of the operating system and the database

Notes:

"+" behind a release number shows that this release is supported as well as higher, certified releases, and future releases are planned to be supported some time after their general availability. As soon as such a higher release becomes supported, the DB2/390 release notes mentioned above are updated accordingly.

(1) SAP runs on OS/390 and on z/OS. The release in above matrix refers to the minimum supported OS/390 release unless z/OS is explicitly mentioned as minimum.

(2) AIX 32-bit only: 3.1I_COM, 4.0B_COM, 4.5B_COM

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

AIX 32- and 64 bit: 4.6D, 6.10
 AIX 64-bit only: 6.20 and higher
 32-bit SAP kernels run on 32-bit hardware as well as on 64-bit hardware.
 Support for SAP kernels on AIX 32 bit will not expire for SAP kernels based on 3.1, 4.0, 4.5 and 4.6.

- (3) The latest service pack which is supported by SAP is required. Supported service packs are documented in SAP note 30478.
- (4) Only specific Linux distributions with defined Kernel and glibc are supported: see SAP note 81737 to find out which Linux distributions are supported.
- (5) A G5 HW model is the required minimum (see II12111).
- (6) AIX 64-bit only.
- (7) z/OS 1.4 is minimum requirement; however, if it is planned not to use J2EE, it is still possible to use z/OS 1.2+. Note that DB2 Version 8 requires z/OS 1.4.

Extended release matrix for outdated kernels

A few SAP modules are delivered only on certain kernels which may meanwhile have become outdated.

Following kernels are supported only for the installation of these SAP modules. After you have installed these modules on the outdated kernel, you should replace the outdated kernel by the most current one.

	Database Server	Application Server	Releases		
Operating System (OS) Releases	-----				
ICLI for SAP for Kernel (1) (1) (4)	OS/390 z/OS	DB2 64-bit	AIX(2) (3)	LINUX	OS/390 Solaris Windows

z/OS 1.2
-----

```

Notes:

- (1) SAP runs on OS/390 and on z/OS. The release in this matrix refers to the minimum supported OS/390 release.
- (2) AIX 32- and 64 bit: 4.6D
32-bit SAP kernels run on 32-bit hardware as well as on 64-bit hardware.
- (3) The latest service pack which is supported by SAP is required. Supported service packs are documented in SAP note 30478.
- (4) A G5 HW model is the required minimum (see II12111).
For more requirements like e.g. the tcsh (C-Shell) kit, see SAP doc. "R/3 Installation on OS/390 UNIX System Services".

3. Recommended service level

The recommended service level is documented and regularly updated in SAP note 81737. This note should be reviewed on a regular basis to ensure that all PTFs fixing problems that were experienced with SAP on DB2 for OS/390 and z/OS are applied.

A PTF check tool is available from SAP which supports you in checking the service level on your systems. It automatically retrieves the current SAP note 81737 and the fix level file from SAPNet R/3 Frontend (OSS).

For details on the check tool refer to SAP note 183311.

4. Miscellaneous information, for example, documentation

The Planning Guide is issued once per SAP release and orderable through IBM shortly after the availability of the SAP upgrade shipment. It is also part of the SAP installation and upgrade shipments. If you need this book before the SAP shipment, you may want to use the book belonging to the previous SAP release. From Release 4.6C and higher, the documentation is supplied only as pdf files on the inst. documentation CD and upgrade documentation CD in the installation and upgrade packages. You may still order printed copies of the documentation:

SAP documentation may be ordered through SAPNet Web Frontend under XX-SER-SWFL-SHIP using the SAP material number.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

IBM documentation may be ordered using the IBM Form Number through IBM.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

R/3 Application Server on z/OS or OS/390 require an S/390 server with IEEE Floating Point hardware or an IBM eServer zSeries.

This means that the following servers are supported:

- IBM eserver zSeries: That is, all models of the zSeries - including
 - all z990 (all machine types 2084-3** -such as 2084-316), and
 - all z900 (all machine types 2064-1** -such as 2064-116), and
 - all z800 (all machine types 2066-0** -such as 2066-004), and
 - all z890 (all machine types 2086-*** -such as 2086-470).
 - S/390 Parallel Enterprise Server Generation 5:
 - That is, all machine types 9672-***6 (26 total models - e.g., 9672-RX6).
 - S/390 Parallel Enterprise Server Generation 6:
 - That is, all machine types 9672-***7 (24 total models - e.g., 9672-ZZ7).
 - S/390 Multiprise 3000: That is, machine types 7060-H30, 7060-H50, 7060-H70. Examples of unsupported servers are earlier S/390 Parallel Enterprise Server models and generations such as G3, G4, and Multiprise 2000 models. Also, all implementations of SAP R/3 Releases after 4.6x and later on OS/390, including DB Server implementations only, will have the same requirement for IEEE Floating Point as above. This is because the upgrade process requires the SAP Application Server on OS/390.

Attention:: Note not current in language English

Symptom

DB2/390 / 4.6x

Reason and Prerequisites

This note describes the database and operating system releases which are released with the SAP kernel.

Other combinations are not supported.

The note consists of three parts:

**** Part 1 contains some general information, for example on the topic "Use of different operating system releases".***

**** Part 2 defines the SAP kernels released with an R/3 release with the help of a table, and some possibly existing restrictions.***

**** Part 3 defines the operating system and database releases which are released with an SAP kernel with the help of another table.***

Note:

This note does not contain any information on planned R/3 / DB / OS Release combinations, but only information on already released releases.

You can get a list of planned SAP kernel / DB / OS combinations as well as information on heterogeneous R/3 configurations under the following URLs:

<http://intranet.sap.com/platforms> (SAPNet internal view)

or

<http://service.sap.com/platforms> (SAP Service Market-

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

place)

Note that not all the DB and OS combinations listed in this note have been released for all mySAP.com components. mySAP.com components like BW, APO, BBP, CRM, and so on are based on the SAP basis / SAP kernel technology, however, they have their own DB and OS platform releases. For further information on these platform releases, also refer to the above-mentioned link.

1. General information :

a) Use of different operating system releases

The operating system releases may differ between the individual application servers.

The SAP kernel, however, must be identical on all application servers.

You can see all operating system releases which are released for an SAP kernel and a database server in table 2.

This regulation allows a "rolling upgrade", that is, the upgrade between the database and the application servers and among the application servers is run separately.

b) Service Packs on Windows NT

For the selection of supported Service Packs on Windows NT, refer to Note 30478 "Service Packs on Windows NT".

2. Released SAP R/3 Releases and SAP Kernels

We recommend that you always use the most current released SAP kernel.

Example:

You can see in table 1 that the R/3 Release 4.6A can be operated with the SAP kernel 4.6A.

You can see in table 2 that the SAP kernel 4.6A is released with the operating system AIX 4.3.x and database DB2/390 6.1.

Hence the following software combination is allowed:

R/3 release	: 4.6A
SAP kernel	: 4.6A
Database release	: DB2/390 6.1
Operating system release:	AIX 4.3.x (x>=2)

Table 1:

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Basic (Minimum) Prereqs

- ◆ SAP R/3 3.1H: OS/390 **V1R3** or higher (including RMF, DFSORT, DSS, Sec.Server)
DB2/390 V5.1 + Feat. DB2 Perf. Mon.
- ◆ SAP R/3 4.0B: OS/390 **V2R5** or higher (including RMF, DFSORT, DSS, Sec.Server)
DB2/390 V5.1 + Feat. DB2 Perf. Mon.
- ◆ SAP R/3 4.5B: OS/390 **V2R5** or higher (including RMF, DFSORT, DSS, Sec.Server)
DB2/390 V5.1 + Feat. DB2 Perf. Mon.
- ◆ SAP R/3 4.6B: OS/390 **V2R8** or higher (including RMF, DFSORT, DSS, Sec.Server)
DB2/390 V6.1 + Feat. DB2 Perf. Mon.
- ◆ SAP R/3 4.6C: OS/390 **V2R8** or higher (including RMF, DFSORT, DSS, Sec.Server)
DB2/390 V6.1
- ◆ SAP R/3 4.6D: OS/390 **V2R8** or higher (including RMF, DFSORT, DSS, Sec.Server)
DB2/390 V6.1

- ◆ SAP WebAS 6.20: **z/OS V1R2 or higher (when SAP certified and released)**
DB2/390 V6.1 or higher
AIX 5.1 or higher 64bit Application Server
(ESCON is NOT supported anymore with AIX 5.1 64 bit,
Gigabit Ethernet recommended)

- ◆ **SAP WebAS 6.40: Database Server:**
zSeries hardware (z800, z900, z990 etc.) only supported!
z/OS V1R4 or higher (when SAP certified and released)
DB2/390 V8 or higher and DB2 Connect V8 SP5 or higher
instead of ICLI connectivity
Application Server:
z/OS V1R4 or higher (when SAP certified and released) on
zSeries hardware (z800, z890, z900, z990 etc.) only supported!
SuSE Linux for zSeries SLES8 or higher on zSeries hardware
AIX 5.1 or higher on pSeries hardware
Windows (2000/32bit, 2003/32 or 64bit) or higher
on Intel based hardware
Solaris 8 or higher on Sparc based hardware
JDK 1.4 or higher
SAP Kernel: SAP WebAS 6.40 or higher
SAP J2EE: SAP J2EE 6.30 SP3 or higher

**News for mySAP Business Suite on IBM eServer zSeries
with database server DB2 UDB for z/OS and OS/390
Version 2004Q2, status of July 16, 2004**

- ◆ If you want use TCP/IP as protocol between appserver and dobserver you now need at least OS/390 **V2R10** or z/OS 1.1 and higher when being SAP certified (including RMF, DFSORT, DSS, Sec.Server)
DB2/390 V6 or higher when SAP certified
- ◆ If you want use OSA Express Gigabit Ethernet you now need at least OS/390 **V2R10** or z/OS 1.1 and higher when being SAP certified (including RMF, DFSORT, DSS, Sec.Server)
DB2/390 V6 or higher when SAP certified
- ◆ **OS/390 Versions below V2R10 are out of service after march 2003 and service for OS/390 V2R10 will end september 2003, please consider these facts for your mySAP installation and planning to switch to actual releases of z/OS (1.4 or higher) !**

**News for mySAP Business Suite on IBM eServer zSeries

Version 2004Q2, status of July 16, 2004**

Hints and recommendations

for SAP R/3 with DB2 for OS/390 database server

IBM Insight for SAP R/3

(Release 3 available!)

**Do you want to know the real workload and utilization
your sap system is running in production?**

**Check the description of the IBM Insight for SAP R/3 utility Program and
download it and install it if appropriate!**

You can find IBM Insight for SAP R/3 on the following Website:

<http://www.ibm.com/erp/sap/insight>

IBM Insight for SAP R/3 Overview

The IBM Insight for SAP R/3 utility program and its subsequent analysis process and report are designed to provide a high level and convenient workload analysis for an inproduction SAP system complex. The analysis includes actual active user counts, machine utilizations, user/module load distributions, dialog counts, information about batch and reporting usage, system information, and database information.

The IBM Insight for SAP R/3 utility program is packaged as an all-in-one Microsoft® Windows 95, Windows 98, Windows NT®, and Windows 2000 install image, ready for installation on any customer's Windows/Intel® system capable of communicating with the production SAP complex. Documentation is included with this software. IBM Insight for SAP R/3 has been validated to run against SAP production complexes comprised of Windows NT, AIX, AS/400, S/390, or non-IBM installed UNIX® and Windows NT environments.

To use IBM Insight, just install the utility on your PC, set up initial communication parameters, ensure authorization and access, and then begin your recording session. The software continues to record performance data from the SAP complex, using SAP's RFC functionality, until you end the session. At this point, the collected data is forwarded via e-mail to IBM for reduction, analysis, and customer report production. Customer collected data sets, as well as requests for further information or support, should be sent

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

in the US to: eSizings@us.ibm.com , in other regions please ask for your local sizing support via IBM Techline.

We strongly recommend that three days worth of data be collected during a period of the month with reasonably high usage. Only the data from the production system will be analyzed. Non-production environments are excluded from this offer.

UNIX is a registered trademark in the United States and other countries licensed exclusively through The Open Group.

Intel, Pentium and Itanium are trademarks of Intel Corporation in the United States, other countries, or both.

Actual Release: Insight 3.0

Overview of Process:

This software will capture performance and dialog step statistics generated by your production SAP system. The captured statistics are written to the hard drive of the Windows PC dedicated for the collection process. When the collection process is complete, the statistics are reduced and compressed before being sent to IBM for analysis. A report will be sent to you detailing how your production system was utilized. The provided collection tool is designed to have a minimal impact on your production environment.

It is recommended that you collect at least **one to three days** of statistics during a peak period to improve the quality and value of the report.

Note: **Date and time** displayed in the Insight report will be **based on the PC clock** where the Insight Collector is run – not the R/3 application servers.

Insight Host CPU Utilizations

Most of Insight's information is related to just the SAP system where Insight was run. However, Insight's host CPU utilization has a wider perspective. It is at a "host view". As such, it includes all the work running in that operating system image -- not just the SAP system where Insight was run. Running unrelated work with SAP will increase the "Host CPU Utilization". Similarly, if you were running two SAP systems on the same operating system image (e.g., in a single zSeries LPAR or with MCOB) the Insight "Host CPU utilization" is for both SAP systems. However, the "Host CPU Utilization" does not include any work running in other LPARs.

zSeries (S/390) RMF Data (sizing customers only)

In the z/OS (or OS/390) SAP environment, we strongly suggest you also provide us with Resource Measurement Facility (RMF) data that corresponds to the Insight observation interval. This can allow us to better take into account Logical Partitioning, the specific machine type, as well as other z/OS items. The following is a short description of which RMF information we would like. This description assumes familiarity with RMF. So you should pass this on to your z/OS people.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

We would like to get the text output of a run of RMF's Postprocessor (ERBRMFPP) sent with the Insight data. Specifically we would like to see the Summary Report, the CPU Activity Report (which includes the Partition Data Report), and the Paging Activity Report. The interval of the report should, as best as possible, correspond to the Insight interval. For example, assume

Insight was run from 0800 hrs January 6, 2003 to 08:00 hrs January 9, 2003. Because of limitations of the RMF, this would entail three Postprocessor runs (and the associated RMF reports). See the Postprocessor control statements below as an example.

First report (0800 hrs to midnight January 6):

```
SUMMARY(INT,TOT) /* Summary reports */  
REPORTS(CPU) /* CPU activity report - CPU and LPAR information */  
REPORTS(PAGING) /* Paging activity report - memory installed how used */  
DINTV(1600) /* Length of duration report - 16 hours */  
RTOD(0800,2400) /* Starting and ending time of day to look at */  
DATE(01062003,01062003) /* What day to look at - Jan 6, 2003 */
```

Second report (January 7 and 8 combined):

```
SUMMARY(INT,TOT) /* Summary reports */  
REPORTS(CPU) /* CPU activity report - CPU and LPAR information */  
REPORTS(PAGING) /* Paging activity report - memory installed how used */  
DINTV(4800) /* Length of duration report - 2 days (continuos) */  
RTOD(0000,2400) /* Starting and ending time of day to look at - all day */  
DATE(01072003,01082003) /* What days to look at - Jan 7-8, 2003 */
```

Third report (0000 hrs to 0800 hrs January 9):

```
SUMMARY(INT,TOT) /* Summary reports */  
REPORTS(CPU) /* CPU activity report - CPU and LPAR information */  
REPORTS(PAGING) /* Paging activity report - memory installed how used */  
DINTV(0800) /* Length of duration report - 3 days (continuos) */  
RTOD(0000,0800) /* Starting and ending time of day to look at - all day */  
DATE(01092003,01092003) /* What day to look at - Jan 9, 2003 */
```

Send the SYSOUT(s) to the PC that is running Insight. On this PC, rename the file(s) with a *.RMF file type and add the file(s) to the Insight data directory created by the Insight Collector when started. Do this after the data collection phase but before the reduction. The Insight Reducer will then automatically compress the entire directory and send all the data to IBM.

Additionally, we recommend that you save all the SMF type 70 through 78 records for this interval in case you might want to do further analysis later. For example, after IBM has sent you the Insight results, you want to look in more detail at the eight hour peak CPU utilization period identified by Insight.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Usage Requirements:

A dedicated PC:

- IBM compatible with at least a 233 MHz Pentium processor and 64 MB of RAM.
- Installation of Windows 95, 98, Me, 2000, XP, or NT 4.0 operating system.
- Windows 95 may require the Common Control v5 update and the Windows Socket 2 update available from Microsoft.
- Disk space requirements: multiply the total expected number of dialog steps the Insight Collector will capture by 0.00025. Example: The Insight Collector is expected to run for four days capturing one million dialog steps per day. $4,000,000 \times 0.00025 = 1,000\text{MB} = 1\text{GB}$ of disk space.
- For Windows 2000 and NT 4.0: Set the total virtual memory (physical memory + paging file) to a minimum of 128MB.
- PC must be on LAN with direct TCP/IP access to all production servers (except for a dedicated database server).
- The TCP/IP address of all server short host names (as seen in SM51) must be resolved by either "hosts" file entries, or DNS with a consistent, fully qualified domain. In an SP environment, short host names may require an alias in the PC's hosts file to resolve the switch host names over the client token-ring or ethernet network. Note: do not specify a domain in the SAP logon parameters.

Example alias entry in the PC's hosts file:

```
#IP address ethernet switch
```

```
# hostname hostname
```

```
9.93.100.21 appsv1en appsv1cs
```

- The PC must be powered on during the entire data collection process.
- Disable the PC's power management (suspend) during the collection process.

SAP R/3 system:

- *Insight* supports SAP releases 3.0D and higher.
- The SAP Operating System collector (saposcol) must be setup and running on all application servers in the target system.
- If the database is on a dedicated server (no SAP instance), saposcol and rfcoscol must be installed and working. Also, an RFC destination (TCP/IP connection in SM59) must be configured to access the remote saposcol from the Central Instance. This RFC destination is entered when prompted with the Dedicated Database dialog box.
- SAP statistics recording must be enabled (profile parameter: stat/level = 1).
- A SAP user ID of type CPIC (System) must be created and assigned a profile (e.g. Z:INSIGHT) with the following authorizations:

```
S_ADMI_FCD(S_SACHBEARB), S_C_FUNCT(S_C_FUNCT_AL),
```

```
S_DATASET(S_DATASET_AL), S_LOG_COM(S_LOGCOM_ALL), S_RFC(S_RFC_ALL),  
S_RZL_ADM(S_RZL_SHOW).
```

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Usage and implementation hints and tips

- ◆ to optimize load time use DASD FastWrite for DB2 logs
- ◆ put DB2 user catalog into an VLF dataspace (Updates in memory!)
- ◆ **check on a regular base (e. g. each week!) for latest z/OS and/or OS/390, database and other SWs service and PTF levels (use info in SAP NOTE 81737, please draw always a new copy from SAP SERVICE SYSTEM: service.sap.com/notes)**
- ◆ speed up client copy (SAP R/3 NOTE 96732)
- ◆ **use the latest kernel patch level available**
- ◆ If you have IBM ESS (“Shark”) or RVA DASD available with the FlashCopy function or SnapShot Software installed you can use very fast FlashCopy or SnapShot ImageCopies in conjunction with use of DFSMS support (Parameter “concurrent”) which is available since 4/98.(refer to IBM redbook SG24-5268 DFSMSdss SnapShot and Virtual Conc. Copy)

NOTE Assistant

The Note Assistant, a new tool for implementing and handling SAP Notes, is available to all customers as of April 20, 2001.

This development represents a small revolution for those involved in the implementation of SAP Notes, as it makes working with corrections faster and simpler than ever before.

The Note Assistant is intuitive and easy to use, with four easy steps:

- Load SAP Note
- Read SAP Note carefully
- Check prerequisites
- Implement correction

The Note Assistant determines the appropriate correction instruction for that version of your SAP solution and issues a green light signaling you to proceed with implementing the correction. One of the most important capabilities of the Note Assistant is its ability to recognize dependencies on Support Packages, upgrades, and SAP Notes that have already been implemented. Moreover, the Note Assistant is closely integrated with the Modification Assistant. After you implement a Support Package, for example, any corrections indicated in SAP Notes are displayed separately from your own modifications, which makes the adjustment much more efficient.

It is still essential that the person who deals with the implementation of SAP Notes reads the note carefully to find out whether it corresponds to the specific situation. The note also contains information on whether it involves preparation or follow-up tasks.

The Note Assistant is available for SAP R/3 4.5B, 4.6B, and 4.6C. You can download the Note Assistant free of charge from the SAP Service Marketplace. For more information, visit the SAP Service Marketplace at <http://service.sap.com/noteassistant>.

SAP Announces Updated Release and Maintenance Strategy for mySAP ERP and SAP R/3

SAP has defined a new, streamlined Release and Maintenance strategy, that offers our customers more flexibility in planning the best suited path and point in time for their transition from SAP R/3 to mySAP ERP. This strategy involves several new Extended Maintenance offerings, and as a whole offers long term planning security.

Effective immediately, SAP is introducing a new **5 - 1 - 2** release and maintenance strategy for mySAP ERP, as follows:

- Duration of Mainstream Maintenance for a software release is 5 years (at Mainstream Maintenance fee)
- Thereafter, Extended Maintenance is available for 1 more year at an additional fee of 2% (current Mainstream Maintenance fee + 2%)
- Thereafter, Extended Maintenance is available for 2 more years at an additional fee of 4% (current Mainstream Maintenance fee + 4% per year)
- Thereafter, the software release will enter Customer-Specific Maintenance. If a customer does not order Extended Maintenance, the release will enter Customer-Specific Maintenance directly after the end of Mainstream maintenance. For more information on the Customer-Specific Maintenance phase, see SAP Service Marketplace, quick link <http://service.sap.com/maintenance>, then SAP Standard Support -> Customer-Specific Maintenance.

For existing SAP R/3 releases, the following maintenance extensions will be offered:

- **SAP R/3 Enterprise Extension Set 1.10** - Extension of Mainstream Maintenance from December 2006 until end of **March 2009** at no extra fee; includes all Industry Add-Ons (-> alignment of Mainstream Maintenance for SAP R/3 Enterprise Extension Set 1.10 and 2.00)
- **SAP R/3 Enterprise** - Extended Maintenance from April 1, 2009 until the **end of March 2012** (first year: additional fee + 2%, next 2 years: additional fee + 4% per year). Both Extension Sets (1.10 and 2.00) can be extended until end of March 2012.
- **SAP R/3 4.6C** - Extended Maintenance from January 1, 2007 until the **end of December 2009** (2007: additional fee + 2%, 2008/2009: additional fee + 4% per year).
- **SAP R/3 3.1I - 4.6B** - Extended Maintenance for an additional 2 years from January 1, 2005 until the **end of December 2006** for an additional fee of +4% per year.

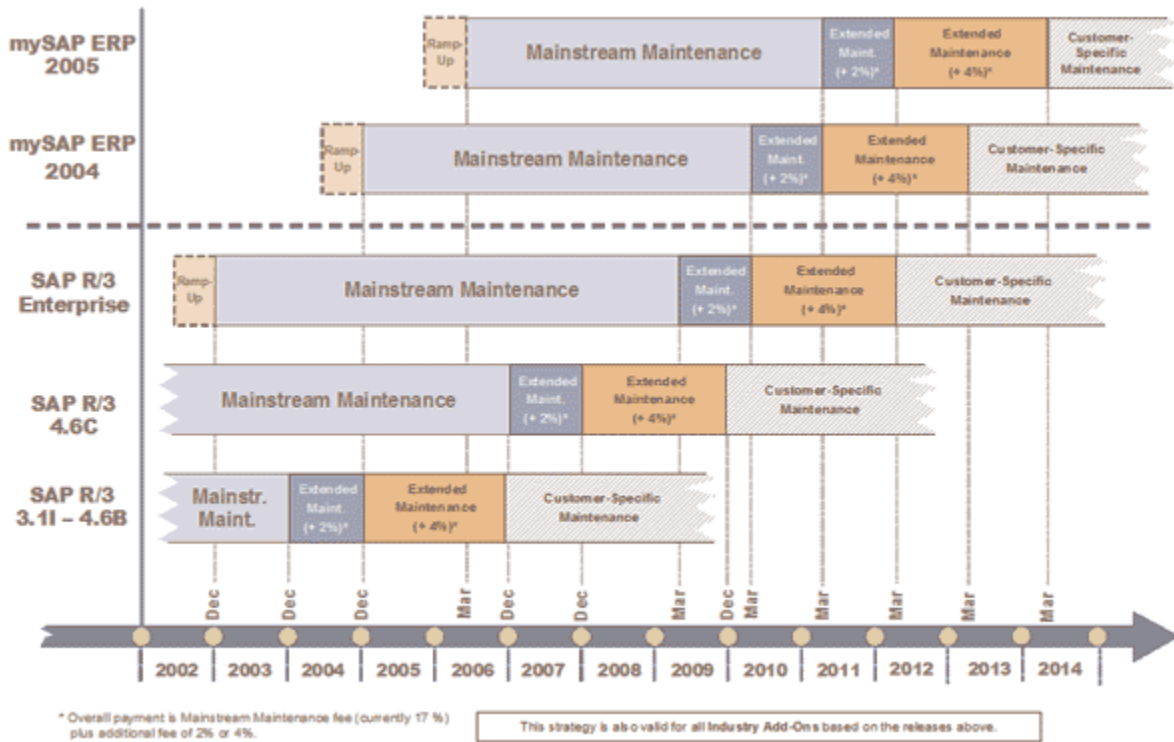

The overall payment during the Extended Maintenance phase is the Mainstream Maintenance fee (currently 17 %) plus an additional fee of 2% or 4% per year.

The Extensions mentioned above include **legal changes** for human resources (HR) as well as financials and logistics (FI/LO) software which is offered by SAP or an SAP subsidiary as part of Mainstream Maintenance. HR and FI/LO country versions whose Mainstream Maintenance period has already ended will not be reinstated.

Industry Add-Ons are also included in all Extension offerings mentioned above, but Industry Add-Ons whose Mainstream Maintenance period has already ended will not be reinstated. If there are several releases of an Industry Add-On for the same SAP R/3 release, only the latest Industry Add-On release will be supported during Extended Maintenance.

Detailed information including scope and restrictions for Extended Maintenance is available in SAP Service Marketplace at quick link <http://service.sap.com/maintenance>, then SAP Maintenance Extension -> SAP R/3 Maintenance Extension. Order forms for Extended Maintenance will be made available at this site by end of April 2004.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Informational IBM APAR II13767 (dated 04/03/15) DB2 V6 / V7 LOB Manager recommended Maintenance information

It lists all open or closed problem with LOBs and DB2 UDB on z/OS and OS390.

Item II13767

PTF List:

Parent APAR:

Child APAR list:

ERROR DESCRIPTION:

Following is a list of DB2 V6/V7 LOB fixes (involving Lobs, Blobs, Clobs, LongVarchar). Customers utilizing LOBs are encouraged to be current with this service, apars that affect LOB follow standard support procedures and critical data corruption/integrity should be marked HIPER. *All LOB HIPER apars should be applied.*

.
Please note any references that list ' * MAJOR FIX ', please go to at least that level fix, plus any HIPERs.

.
OPEN indicates we are working on that APAR.
04nn indicates we are waiting on PTF closure/availability, but the APAR is Closed and the PTF is orderable.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

MCOD ("One database")

MCOD, called Multi Component in One Database, is the initiative of SAP to offer a solution for a consolidation of SAP systems.

Although installation was already available for months, more features are now offered for DB2 on zSeries including an improved version of system monitoring. The features listed below are applicable for both single or shared databases (Sysplex). However, it is recommended to use MCOD with a datasharing system.

MCOD Features:

- a) Allows to install multiple SAP components in one or more DB2 subsystems. SAP components are distinguished by different high-level qualifiers and creators / schematas (<> SAPR3)
 - .Initial support with 4.6D SR1 (SAP Note 388866)
 - .Check availability dates and requirements per component in SAPNet!
- b) Keeps logically connected systems physically consistent
 - .Consistent R/3 - CRM landscape
 - .Pooling of UNRELATED systems (eg. large # of test systems) is NOT recommended!
- c) DB2 data sharing provides the optimal platform for MCOD
 - .Fully customizable/tunable instances(data sharing member)
 - .Consistent backup and recovery
 - .Maximum flexibility and scalability from intra LPAR to
Parallel Sysplex

Implementation of the MCOD features:

1) Limitations:

DB2/390 currently has a limit of 5 fullblown SAP systems in one DB2 subsystem.

2) Installation:

It is possible to install additional SAP systems in one database entity using a random schema name starting 4.6C. As a recommended naming convention the schemas shall be named "SAP<sid>".

3) Upgrade:

It is possible to upgrade any of the SAP systems within one database entity independently.

**News for mySAP Business Suite on IBM eServer zSeries
with database server DB2 UDB for z/OS and OS/390
Version 2004Q2, status of July 16, 2004**

4) Backup:

Database backups are always and only applied to the complete database subsystem i.e. all included SAP systems.

5) Restore:

See backup.

6) Recovery / Rollforward:

Based on the common Restore and the corresponding Log Files all SAP systems will be synchronized at the same "point-in-time".

7) Homogeneous system copies:

Database tools copy all SAP systems at a time / system consistency.

SAP tools copy SAP systems by SAP system from and into another database.

8) Job scheduling:

Each SAP system within a database entity can schedule its own jobs only.

With release 6.10, the new functionality of DB13C allows to centrally submit jobs for all defined systems in a database entity.

9) CCMS tools / Monitoring:

Each SAP system monitors its own system or database subsystem where appropriate (Alert-Monitoring or Database performance analysis).

For introduction of MCOB with DB2 UDB for zSeries and prerequisites **please refer to the SAP notes 399419 & 440954.**

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

High Availability and Automation

A new high availability solution for mySAP on DB2 for z/OS has been developed by IBM in close cooperation with SAP. It is based on the IBM product System Automation for OS/390 and uses SAP's new design of the 'central instance' concept. Concepts of automation, high availability, and transparent failover are combined in this new solution which is currently being tested by selected customers. High Availability is a decisive factor for most of our customers.

The database is the most critical component in an SAP system - and DB2 UDB for OS/390 already offers a long, well-known history of high availability features. DB2 data sharing in a Parallel Sysplex environment is the key element of this continuous availability solution. Additionally ARM, dynamic virtual IP Addresses (VIPA), and shared HFS are exploited in order to guarantee a minimum of system outages along with a maximum of automation. Learn more about System Automation for OS/390 and its additional features needed to streamline daily operations, like features for automated startup, shutdown, maintenance, and monitoring, at: <http://www.ibm.com/servers/eserver/zseries/software/sa>
Find more details on the High Availability solution, for example, the October 2001 workshop presentations or software requirements as well as samples (automation policy, startup scripts, profiles, and more) at: http://www.ibm.com/servers/eserver/zseries/software/sa/adds/sap_r3detail.html

**News for mySAP Business Suite on IBM eServer zSeries

Version 2004Q2, status of July 16, 2004**

There is a webpage

"DB2/SAP Quarterly Technical Newsletter"

available via

<http://www.software.ibm.com/data/partners/ae1partners/sap>

with a quarterly update frequency.

Information on the latest certified levels are recorded in SAP R/3 NOTE 81737.

In addition, information on the additional function being provided via the service stream for DB2 V6 is documented on the web at:

<http://www.software.ibm.com/data/db2/os390/v6apar.html>

**FAST and RELIABLE - The "Split Mirror Backup Solution"
Tested with IBM ESS (Shark) and IBM RVA!!!**

This solution is described in the following documents:

- SAP TechED 99 Presentation: SAP R/3 Advanced Infrastructure Solutions ...
- Detailed Description: High Availability Split Mirror Backup and Recovery

You can find these documents unter following URL:

<http://www.storage.ibm.com/hardsoft/diskdrls/technology.htm>

The necessary new DB2 function LOG SUSPEND/RESUME write is a standard function in DB2 V7 and is available as a PTF in DB2 V6R1: PTF UQ36695 ; APAR PQ31492.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

News of 2004Q1

1. Hints to new or updated SAP notes or information include

(please have a detailed look into the part about SAP Notes for planning purposes in this document)

1.1. Please check important updates in Q1 2004 in SAP Note 81737:

- LOB Manager recommended maintenance
- new MCL on z990 for better HiperSocket Performance
- DB2 7.1 new service level
- z/VM requirements and APARS
- etc.

1.2. SAP announces updated Release and Maintenance Strategy for mySAP ERP and SAP R/3

1.3. Update of SAP Note 158875 , DB2/390: Planned classes for R/3 on DB2 for OS/390 for 2004, V55, updated june 04, 2004

1.4. Update of SAP Note 634299, DB2/390: LOB Data destroyed after COPY utility, updated january 9, 2004

1.5. SAP Note for High availability and automation solution for DB2 on z/OS, 569996 (november 11, 2003), and related Notes: 524816, standalone ENQ server (updated february 13, 2004), 632681, core dump using standalone ENQ and 716915, CST patch collection.

1.6. SAP Note 660528 for Requirements to run SAP NetWeaver on zSeries (november 11, 2003)

1.7. SAP Note 710408 for Prerequisites Kernel 6.40 for WAS 6.10, 6.20 (february 25, 2004)

1.8. SAP Note 662523 for SAP Kernel 6.40 as downward-compatible Kernel for 6.10, 6.20 (september 23, 2004)

1.9. IDES for R/3 Enterprise available, SAP Notes 174107 (IDES availability) and 571893 (IDES for R/3 Enterprise available)

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

2. SAP Release matrix with end of service dates for OS/390 and z/OS releases as well as for DB2 as available

Release-Matrix:

SAP Release (Kernel)	OS/390 Operating System	DB2 Database
3.1	OS/390 2.10 +	V6, V7
4.0	OS/390 2.10 +	V6, V7
4.5	OS/390 2.10 +	V6, V7
4.6D	OS/390 2.10 +	V6, V7 (V8)
6.20	z/OS 1.2 +	V6, V7 (V8)
6.30	z/OS 1.4 +	V7 (V8)
6.40	z/OS 1.4 +	(V8)

SAP end-of-service (as stated in updated SAP release and maintenance strategy of march 2004) :

SAP Release (Kernel)	End-of-Service (17% Mnt fee)	End of Extended SAP Service 1 st period (17%+2% Mnt fee)	End of Extended SAP Service 2nd period (17%+4% Mnt fee)
3.1	Dec 2003	Dec 2004	Dec 2006
4.0	Dec 2003	Dec 2004	Dec 2006
4.5	Dec 2003	Dec 2004	Dec 2006
4.6D	Dec 2006	Dec 2007	Dec 2009
6.20	March 2009	March 2010	March 2012
6.30	March 2009	March 2010	March 2012
6.40	March 2010	March 2011	March 2013

Extended Maintenance Period for SAP Kernels 3.1I_COM, 4.0B_COM, 4.5B, and 4.6D from January to December 2004

New SAP Kernel Versions

To react to the end of maintenance of some databases / operating system releases, SAP will provide new kernel versions (<kernel_release>_EXT, for example 31I_EXT) for the following SAP R/3 releases in Q4 2003:

- SAP R/3 3.1I
- SAP R/3 4.0B
- SAP R/3 4.5B
- SAP R/3 4.6B

In addition, SAP will also provide patches for the SAP kernel versions 31I_COM, 40B_COM, 45B and 46D for certain database/operating system combinations in 2004. To find out which da-

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

database/operating system combinations will be supported with which SAP kernel releases, see the [OS/DB - Kernel Matrix](#).

With these new extended kernels IBM took the chance to rebase the 46D application server on OS/390 2.10 (as new minimum release) and thereby exploit the new and fast high-performance linkage convention (XPLINK).

The resulting performance improvement is in the range of 10 to 20 %.

If you are running SAP R/3 4.6 and you use the application server on OS/390 or z/OS we recommend to install the 46D_EXT kernel.

You need to replace the 46D kernel with the 46D_EXT modules completely and on all instances.

SAP only offers support for a certain SAP kernel version if the underlying database/operating system combinations are still maintained by their suppliers. For more information, see in addition SAP Note 663811.

Support of Operating Systems and Databases

Note that:

SAP **cannot** support operating systems, databases and other third-party middleware components that have run out of maintenance by their suppliers.

Therefore, customers may have to upgrade their database/operating system to more recent versions. SAP will **only** be able to support operating systems, databases and other third-party middleware components if the respective vendor offers a maintenance extension for his product. If this extension is defined as chargeable by the vendor, SAP will add this cost to the fee for the SAP maintenance extension.

Support of Upgrades

Please take the following into consideration, when planning your SAP system upgrade:

- SAP does not support direct upgrades to releases in extended maintenance.
- SAP may not support direct upgrades from releases in extended maintenance to higher releases in mainstream maintenance.
- SAP offers direct upgrades **from** SAP R/3 releases 3.1I, 4.0B, 4.5B or 4.6B **to** SAP R/3 4.6C and any SAP R/3 Enterprise release

For more details about the maintenance extension see the [maintenance extension](#) pages.

**News for mySAP Business Suite on IBM eServer zSeries
with database server DB2 UDB for z/OS and OS/390
Version 2004Q2, status of July 16, 2004**

OS/390 resp. z/OS end of service

OS/390 2.10, 5647-A01	- September 30, 2004
z/OS 1.1, 5694-A01	- March 31, 2004 (out of service!)
z/OS 1.2, 5694-A01	- October 31, 2004
z/OS 1.3, 5694-A01	- March 31, 2005
z/OS 1.4, 5694-A01	- March 31, 2007
z/OS 1.5, 5694-A01	- March 31, 2007 (planned)
z/OS 1.6, 5694-A01	- tbd

For z/OS end-of-service dates please see:

http://www.ibm.com/servers/eserver/zseries/zos/support/zos_eos_dates.html

DB2 on OS/390 resp. z/OS end of service

DB2 V6, 5645-DB2	30.06.2005!
DB2 V7, 5675-DB2	- open, not announced yet, tbd!
DB2 V8, 5625-DB2	- open, not announced yet, tbd!

For DB2 end-of-service dates please see: <http://www.ibm.com/software/data/db2/os390/availsum.html>

Important Info about z/OS 1.6 HW support: zSeries only!

**News for mySAP Business Suite on IBM eServer zSeries
with database server DB2 UDB for z/OS and OS/390
Version 2004Q2, status of July 16, 2004**

A new Architectural Level Set with z/OS 1.6

- **z/OS 1.6 will require z/Architecture**

- ▶ z/OS 1.6 is planned to be available 9/04

- **Only zSeries Servers (or comparable) will be supported:**

- ▶ z990 or comparable server

- ▶ z900 or comparable server

- ▶ z800 or comparable server

- **The following servers do not support z/Architecture and will not be able to run on z/OS 1.6:**

- ▶ G5/G6 servers

- S/390 Parallel Enterprise Server™ - Generation 5 and Generation 6 models or comparable server

- ▶ MP/3000

- All models of the Multiprise 3000 Enterprise Server or comparable server

- **z/OS 1.5 is the last release that will support G5/G6/MP3000 servers**

- **End of service for z/OS 1.5 is planned for 1Q07**

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

3 New and/or updated literature:

3.1 IBM Literature (Redbooks, Whitepapers etc.)

3.1.1 IBM Redbook

(new, available since december 2003, updated march 2004)

DB2 for z/OS and OS/390:

High Availability and Performance Monitoring, SG24-6950-00

SAP on DB2 for z/OS and OS/390: High Availability and Performance Monitoring with Data Sharing

Abstract

This IBM Redbook addresses the challenges posed by monitoring high availability, scalability, and performance in an SAP sysplex data sharing environment. It introduces the motivations for utilizing a design based on DB2 data sharing. It includes the principal SAP-DB2 data sharing architecture options and trade-offs used in the industry today and issues that play a role in both high availability and scalability, such as failover design, database connectivity design, workload splitting and load balancing, MCOB, and coupling facility design.

The book discusses single point of failure, important failover scenarios and outage avoidance, automation of high availability constructs, and backup and recovery considerations in data sharing environments. Performance issues are detailed in the order you would approach them at planning and implementation time. First, it discusses tuning the sysplex, which is the base for a well-performing DB2 data sharing system, then tuning the DB2 data sharing system, which is the base for a well-performing SAP system, and finally, tuning the SAP system.

The book focuses on initial planning for performance and monitoring it afterward, and explains the key points to look for to health-check your system and maintain high performance.

**3.1.2 New technical brief on Techdocs, dated January 28, 2004:
IBM eServer zSeries z/OS Upgrade from SAP Release 4.6C:
Measurements, Advice, and Sizing**

Abstract: Upgrading from one release of SAP to a newer release has always been complex. With the SAP Release 4.6, the zSeries solution supports doing the upgrade application server processing on a restricted number of platforms. At this point only Windows 2000 and z/OS are supported. In the future this might change. But at this time z/OS is the preferred method as it minimizes network time and has the potential for significant reductions in elapsed time. However, the question has come up: "How much time and resources are needed to do the upgrade on z/OS?" The purpose of this paper is to answer that.

**4 DB2 UDB for z/OS version 8 will become generally available as of Friday
March 26th, 2004.**

After successful testing by SAP it will become also available for SAP on zSeries usage.
A staged roll-out will take place depending on SAP releases and prerequisites.

On March 2nd, 2004 IBM announced that **IBM DB2 UDB FOR Z/OS Version 8** and **DB2 QMF V8.1** will become Generally Available as of Friday March 26th, 2004

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

DB2 and QMF Announce Letter. DB2 UDB for z/OS Version 8 is the most robust release to date. Key improvements enhance scalability, application porting, security, architecture, and continuous availability. Management for very large databases is made much easier, while 64-bit virtual storage support makes management simpler, while improving scalability and availability. This new version breaks through many old limitations in the definition of DB2 objects, including SQL improvements, on-line schema evolution, longer names for tables and columns, longer SQL statements, enhanced Java and Unicode support, enhanced utilities, more log data sets, more partitions, and many more advantages. Our extensive SQL enhancements provide for even tighter DB2 UDB family compatibility, which in turn helps our ISV and application programmers effectively leverage their skills and resources. Version 8 is a significant milestone, in that we've addressed many of your requirements, which will ensure years of ongoing incremental database and application growth.

For additional information, please visit our DB2 for z/OS home page at:

www.ibm.com/software/db2zos

DB2 Universal Database (UDB) for z/OS continues to deliver rich function for scalable and highly available data for your enterprise-scale e-business applications. Combine the power and capacity of IBM eServer zSeries, the high performance and high availability of the z/OS operating system, and this enriched version of DB2 to expand and extend your applications in the increasingly competitive on-demand environment. Being able to make database changes without an outage, such as adding a partition, is a breakthrough for availability. Alter your table and go, no need to drop and redefine.

Version 8 users will find the **DB2 Utilities Suite** to be of particular value. This tool delivers full support for the features of DB2 UDB for z/OS V8 such as Unicode catalog, long names and long statements, schema evolution, and indexing and partitioning enhancements. In addition, the DB2 Utilities Suite includes improvements to Restart that increase its autonomic capabilities, and on-line schema support that allows reconciliation between DB2 catalog/directory and tablespace or indexes copied from another system. IBM offers a complete portfolio of DB2 tools that exploit the rich new functions of DB2 UDB for z/OS V8. For more information about DB2 Utilities Suite and all DB2 Tools for z/OS, see www.ibm.com/software/data/db2imstools. For details on the tools' support of DB2 UDB for z/OS V8, see <http://www-306.ibm.com/software/data/db2imstools/support.html>

5 Performance improvements with 46D_EXT kernel on OS/390 and z/OS

SAP has recently released the 46D_EXT kernel. IBM took the chance to rebase the 46D application server on OS/390 2.10 (as new minimum release) and thereby exploit the new and fast high-performance linkage convention (XPLINK). The resulting performance improvement is in the range of 10 to 20 %.

If you are running SAP R/3 4.6 and you use the application server on OS/390 or z/OS we recommend to install the 46D_EXT kernel. You need to replace the 46D kernel with the 46D_EXT modules completely and on all instances.

4. New Technical Preview V1.2 for SAP NetWeaver 2004 on IBM zSeries is available, author: Bernhard Heininger, SAP , november 7, 2003

The technical foundation of the recently announced SAP Enterprise Services Architecture is the next generation of mySAP(tm) Technology, called SAP NetWeaver(tm) .

In order to be able to support the SAP NetWeaver infrastructure on zSeries, built around DB2 for z/OS, the technology needs updates on platform components such as the database and the operating system with regard to Java and Unicode environments.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

For the zSeries platform this means that future SAP solutions require IBM DB2 UDB for z/OS Version 8 (DB2 V8), and the requirements of the supported application servers accelerate the shift towards 64-bit platforms.

In the preview the required platform components are described to help customers to prepare their landscape for the new technologies and solutions. All platform components show the minimum version required for any SAP solution released on SAP NetWeaver technology. The new technology is base for all new SAP components and also for updates of current components.

It is available on the SAP Service Marketplace:

<https://www010.sap-ag.de/~sapidb/011000358700004146532003E>

5. SAP Release matrix with end of service dates for OS/390 and z/OS releases as well as for DB2 as available

Release-Matrix:

SAP Release (Kernel)	OS/390 Operating System	DB2 Database
3.1	OS/390 2.10 +	V6, V7
4.0	OS/390 2.10 +	V6, V7
4.5	OS/390 2.10 +	V6, V7
4.6D	OS/390 2.10 +	V6, V7, V8
6.20	z/OS 1.2 +	V6, V7 (V8)
6.30	z/OS 1.4 +	V7 (V8)
6.40	z/OS 1.4 +	(V8)

SAP end-of-service:

SAP Release (Kernel)	End-of-Service	End of Extended SAP Service
3.1	Dec 2003	Dec 2004
4.0	Dec 2003	Dec 2004
4.5	Dec 2003	Dec 2004
4.6D		March 2006 ?
6.20	open	open
6.30	open	open
6.40	open	open

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Extended Maintenance Period for SAP Kernels 3.1I_COM, 4.0B_COM, 4.5B, and 4.6D from January to December 2004

New SAP Kernel Versions

To react to the end of maintenance of some databases / operating system releases, SAP will provide new kernel versions (<kernel_release>_EXT, for example 31I_EXT) for the following SAP R/3 releases in Q4 2003:

- SAP R/3 3.1I
- SAP R/3 4.0B
- SAP R/3 4.5B
- SAP R/3 4.6B

In addition, SAP will also provide patches for the SAP kernel versions 31I_COM, 40B_COM, 45B and 46D for certain database/operating system combinations in 2004. To find out which database/operating system combinations will be supported with which SAP kernel releases, see the [OS/DB - Kernel Matrix](#).

SAP only offers support for a certain SAP kernel version if the underlying database/operating system combinations are still maintained by their suppliers. For more information, see in addition [SAP Note 663811](#).

Support of Operating Systems and Databases

Note that:

SAP **cannot** support operating systems, databases and other third-party middleware components that have run out of maintenance by their suppliers.

Therefore, customers may have to upgrade their database/operating system to more recent versions. SAP will **only** be able to support operating systems, databases and other third-party middleware components if the respective vendor offers a maintenance extension for his product. If this extension is defined as chargeable by the vendor, SAP will add this cost to the fee for the SAP maintenance extension.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Support of Upgrades

Please take the following into consideration, when planning your SAP system upgrade:

- SAP does not support direct upgrades to releases in extended maintenance.
- SAP may not support direct upgrades from releases in extended maintenance to higher releases in mainstream maintenance.
- SAP offers direct upgrades **from** SAP R/3 releases 3.1I, 4.0B, 4.5B or 4.6B **to** SAP R/3 4.6C and any SAP R/3 Enterprise release

For more details about the maintenance extension see the [maintenance extension](#) pages.

OS/390 resp. z/OS end of service

OS/390 2.10, 5647-A01	- September 30, 2004
z/OS 1.1, 5694-A01	- March 31, 2004 (out of service!)
z/OS 1.2, 5694-A01	- October 31, 2004
z/OS 1.3, 5694-A01	- March 31, 2005
z/OS 1.4, 5694-A01	- March 31, 2007
z/OS 1.5, 5694-A01	- March 31, 2007 (planned)
z/OS 1.6, 5694-A01	- tbd

A new Architectural Level Set with z/OS 1.6

- **z/OS 1.6 will require z/Architecture**

- ▶ z/OS 1.6 is planned to be available 9/04

- **Only zSeries Servers (or comparable) will be supported:**

- ▶ z990 or comparable server

- ▶ z900 or comparable server

- ▶ z800 or comparable server

- **The following servers do not support z/Architecture and will not be able to run on z/OS 1.6:**

- ▶ G5/G6 servers

- S/390 Parallel Enterprise Server™ - Generation 5 and Generation 6 models or comparable server

- ▶ MP/3000

- All models of the Multiprise 3000 Enterprise Server or comparable server

- **z/OS 1.5 is the last release that will support G5/G6/MP3000 servers**

- **End of service for z/OS 1.5 is planned for 1Q07**

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

5. Extended Support Package Strategy by SAP with SAP Support Package Stacks (from November 5, 2003)

At the close of the third quarter 2003, SAP began to extend its Support Package strategy for certain product versions to Support Package Stacks (SP Stacks). SP Stacks will lead to reduced complexity, increased quality, greater transparency, and easier execution of planned maintenance. In operative business, risks will be decreased even more and problem resolution accelerated. SP Stacks will take the reduction of the total cost of ownership one step further.

The increasing diversity of components within a product version calls for greater transparency when it comes to applying Support Packages and patches. With the introduction of SP Stacks, SAP is providing clear guidelines on the recommended or permitted combinations of Support Packages and patches. A new "SP Stack" will be compiled every quarter for each product version included in the new strategy. This SP Stack will contain the optimal combination of Support Package and patch statuses for the individual components at the given time.

SP Stacks are sets of Support Packages and patches for a particular product version that must be used in the given combination.

SAP recommends regular application of these SP Stacks. The technology for applying Support Packages and patches has not changed. However, SP Stacks should be seen as an entity in themselves - customers must apply the Support Packages and patches specified in the SP Stack together, in order to cover minimum requirements and dependencies between individual components.

Reducing the wide range of Support Package combinations theoretically possible to practical, sensible combinations has numerous advantages for customers:

- * Enhanced quality of single Support Packages, since other components involved meet specific minimum requirements, and thus corrections are less complex and of a higher quality
- * SAP's test activities can focus more on the required combinations (SP Stacks), which means that the quality and compatibility of these combinations can be improved
- * Download pages specifically tailored to SP Stacks make it simpler to download the required Support Packages and patches
- * Application instructions specifically created for SP Stacks reduce the time and effort needed to apply corresponding Support Packages and patches

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

* Knowledge of possible restrictions and the transparency of side effects and their solutions is generally better within the context of SP Stacks compared to Support Packages and patches that are combined randomly. Potential problems can be pre-empted or solved faster, and operating costs can ultimately be reduced.

The transition to SP Stacks is initially planned for the product versions listed in the table below.

SP Stack leased	Start with Support Package	Stack Re-
SAP BW 3.0B	SAPKW30B15	08.09.2003
SAP APO 3.1	SAPKY31017	19.09.2003
SAP R/3 4.6C	SAPKH46C45	22.10.2003
SAP R/3 4.6C (HR)	SAPKE46C76	22.10.2003
SAP R/3 4.7x110	SAPKH47015	24.10.2003
SAP R/3 4.7x110 (HR)	SAPKE47020	24.10.2003
SAP CRM 3.0	SAPKU30017	17.11.2003
SAP CRM 3.1	SAPKU31007	08.12.2003

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

6. “DB2 for z/OS V8” Unicode Info available

DB2 for z/OS Version 8 - Unicode Changes

DB2 for z/OS Version 8, which is currently in beta status, has introduced significant changes in Unicode which will build upon Version 7's ability to create UNICODE tables. The definition of Unicode is that it provides a unique number for every character, no matter what the platform, no matter what the program, no matter what the language. It offers both a cost savings and productivity improvement because an application can be written once and deployed across multiple countries / languages without re-engineering. The DB2 Catalog is also being converted from EBCDIC to Unicode. With new function contained within the code page, a single SQL statement will be able to access a combination of Unicode, EBCDIC, and ASCII tables. This will be a significant application enhancement for both our customers and ISV's. Additional information about Unicode itself can be found on: www.unicode.org

These materials below, which can be shared with customers, are extremely useful in defining Unicode concepts and terminology, explaining the changes made within DB2 for z/OS Version 8, and describing the subsequent customer impacts. Through the functionality introduced with Unicode, we're providing additional choices, which is critical in regards to our on-demand global environment, where more of our customers have the requirement to store international data.

Documents IDUG SJ Final Part 1 and 2 are available on request (please send me an email) or IBM internally available via IBM SAP Network Teamroom

7. SAP DB2 for z/OS OEM deliverable available (since October 2003)

This SAP DB2 for z/OS OEM deliverable now includes:

- DB2 V7 Base
- DB2 Utility Suite including:
 - DB2 Operational Utilities
 - DB2 Diagnostic and Recovery Utilities
- DB2 Connect (*)

New SAP Price:

11% of “SAP application value”

Upgrade price from previous package to new package will be available but you have to ask your SAP Sales Representative about it

(*) Note: Please be aware that DB2 Connect is not needed within an SAP/zSeries/DB2 environment with current DB2 V7.

However, DB2 Connect will become a mandatory prerequisite with DB2/zOS V8 (for example supporting Java-based database access).

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

8. Updated and/or new literature

8.1. IBM Whitepaper (updated):

"Tuning SAP / DB2 / zSeries"

(Document Number: WP100287, Last Revised: 09/20/2003)

The whitepaper "Tuning SAP / DB2 / zSeries"

(Document Number: WP100287, Last Revised: 09/20/2003)

has been updated and can be downloaded from

<http://www-1.ibm.com/support/techdocs/atmastr.nsf/WebIndex/WP100287>

Or go via <http://www.ibm.com/support/techdocs/atmastr.nsf>

Select 'whitepapers', select 'WP100287', and double-click it.

This paper is a performance analysis and tuning guide for SAP on DB2 UDB for OS/390 and z/OS. It describes how to analyze performance indicators for SAP with DB2, and it contains examples of typical problems and processes used to analyze them.

Since the original version of the paper was released in 2002, IBM and SAP development have added important new monitoring capability, such as RFCOSCOL-based ST04 and enhanced explain plan, to SAP on DB2 for zSeries.

The paper has been updated with descriptions of the key capabilities of these enhancements, and examples of how they can be used to simplify performance analysis with SAP on DB2 for zSeries. Performance problems that in the past could have required one to use DB2 traces or OS-level monitoring tools can now be solved via SAP transactions, which simplifies problem analysis and speeds up resolution.

8.2. IBM Redbook (new, available since december 3, 2003)

DB2 for z/OS and OS/390: Ready for Java,
SG24-6435-00

DB2 for z/OS and OS/390: Ready for Java

Abstract

In this IBM Redbook we show how Java and DB2 for z/OS and OS/390 can work together and form a strong combination that can run your mission-critical enterprise applications. This publication focusses on the new IBM Universal Driver for SQLJ and JDBC, IBM's new JDBC driver implementation, supporting both Type 2 and Type 4 driver connectivity to the members of the DB2 family, including DB2 for z/OS, and DB2 for Linux, Unix and Windows.

This publication provides guidance on the different ways to set up your environment to hook a Java program up to a DB2 for z/OS subsystem, through JDBC or SQLJ, using the Type 2 driver and the Type 4 driver.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

We provide an SQLJ tutorial, and demonstrate how to develop and deploy SQLJ programs using the new SQLJ support functions that became available with WebSphere Studio Application Developer V5.1. We demonstrate the use of Java and DB2 using native Java programs, as well as through the use of Servlets and JSPs running on a WebSphere Application Server.

- 8.3. IBM Redbook** (updated, september 26, 2003)
DB2 UDB for z/OS Version 8 Technical Preview,
SG24-6871

DB2 UDB for z/OS Version 8 Technical Preview

Abstract

IBM DATABASE 2 Universal Database Server for z/OS Version 8 (DB2 V8 throughout this IBM Redbook) is the twelfth and largest release of DB2 for MVS. It brings synergy with the zSeries hardware and exploits the z/OS 64-bit virtual addressing capabilities. DB2 V8 offers data support, application development, and query functionality enhancements for e-business, while building upon the traditional characteristics of availability, exceptional scalability, and performance for the enterprise of choice. The DB2 V8 environment is available only for the z/OS platform, either for brand new installations of DB2, or for migrations exclusively from DB2 UDB for OS/390 and z/OS Version 7 subsystems.

DB2 Version 8 has been re-engineered for e-business, with many fundamental changes in architecture and structure. Key improvements enhance scalability, application porting, security architecture, and continuous availability. Management for very large databases is made much easier, while 64-bit virtual storage support makes management simpler and improves scalability and availability. This new version breaks through many old limitations in the definition of DB2 objects, including SQL improvements, schema evolution, longer names for tables and columns, longer SQL statements, enhanced Java and Unicode support, enhanced utilities, more log data sets, and many more advantages.

This redbook introduces the major changes and enhancements made available with DB2 V8. It will help you understand the functions offered by DB2 V8, and provides enough information to start evaluating their applicability to your environment, as well as to start planning for the installation of DB2 V8 or the migration from DB2 V7.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

8.4. IBM Redbook (new, available, december 16, 2003) DB2 UDB for z/OS Version 8: Through the looking glass and what SAP found there, SG24-6097

DB2 UDB for z/OS V8: Through the Looking Glass and What SAP Found There

Abstract

DB2 UDB for z/OS Version 8 (DB2 V8) introduces a large number of new features that provide for unmatched scalability, availability, performance, and manageability to reliably handle any information needed in SAP solutions. The objective of this IBM Redbook is to identify the new features of DB2 V8 that are particularly beneficial to SAP and to describe how SAP applications can take advantage of these new features. While some of these features can be exploited transparently by the currently available versions of DB2, for some others the next technological release of SAP will be required. The redbook introduces the new features and provides real-life examples from SAP to demonstrate the usefulness of the new features for SAP and to show how SAP can exploit them.

The considerations within this redbook apply to the whole spectrum of business solutions within the mySAP Business Suite, such as mySAP ERP and mySAP Supply Chain Management. These solutions share the common technical application platform SAP NetWeaver that includes the SAP Web Application Server and SAP Business Information Warehouse.

While this redbook specifically investigates the new features of DB2 V8 in the context of SAP, the majority of the considerations also apply to other enterprise packaged applications. The reason for this is that from a database management perspective, these applications have many similarities, such as a strong usage of dynamic SQL and a large number of database objects. For a more general description of the new features of DB2 V8, see DB2 UDB for z/OS Version 8: Technical Preview, SG24-6871.

8.5. IBM Redpaper (updated, november 03, 2003) mySAP Business Suite Managed by IBM Tivoli System Automation for Linux, REDP-3717-00

mySAP Business Suite Managed by IBM Tivoli System Automation for Linux

Abstract

In this IBM Redpaper, we describe the implementation and design of an automated and highly available **SAP** system driven by IBM Tivoli System Automation for Linux. We provide guidance and recommendations for a high availability strategy with respect to **SAP** environments. Practical considerations regarding design, implementation, testing, and maintenance work with the system are also discussed.

This Redpaper lists the resources and components that need to be considered when implementing automation procedures in an **SAP** environment. We describe the necessary steps to set up System Automation for Linux. Extensive testing is required to verify a proper configuration. This Redpaper also provides a verification procedure and failover scenarios. We include a System Automation for Linux policy that defines one **SAP** system in a three node cluster.

We believe that this Redpaper will be an invaluable reference for system engineers working with the System Automation for Linux product implementing **SAP** automation in a high availability environment.

9. Website available: www.ibm-sap.com with a lot of info about cooperation of IBM and SAP and also other news

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

Upgrades to target releases > 4.6

Please take into consideration that for upgrades to target releases > 4.6, e.g. Web AS 620 as prereq for R/3 Enterprise, you will need for the whole upgrade time a z/OS USS Central Instance Application Server running according to SAP Note 138906 at the end: "Also, all implementations of SAP R/3 Releases after 4.6x and later on OS/390, including DB Server implementations only, will have the same requirement for IEEE Floating Point as above. This is because the upgrade process requires the SAP Application Server on OS/390.", doing an MCI Upgrade according to SAP Note 569821 with an SAP Dialog instance running on z/OS USS before the upgrade and a SAP Central Instance Application Server on z/OS USS during the upgrade, or, as the (only) alternative (at this time) to a z/OS USS Application server, a Windows 2000 application server.

Please also read also SAP Note 594861, 620 upgrade, saplicense fails.

Appended on the next two pages you will find a collected info (as-is, without any warranty for completeness!) about needed info for an upgrade to SAP WAS 6.20:

Hints and Tips for upgrading to Web Application Server 6.20 with SAP on DB2/390:

Please take into consideration that BEFORE first start of PREPARE the following prereqs are fulfilled:

1. Database version at least DB2 Version 6.1.0,
my (JZ) recommendation is DB2 for z/OS Version 7.1.0 because of additional functions and longer maintenance than DB2 V6.
2. Operating System of zSeries or S/390 Server: z/OS Version 1.2 or higher as SAP certified,
my (JZ) recommendation is z/OS 1.4 when you begin now.

On UNIX Upgrade will be only supported for z/OS Unix System Services (z/OS USS). If your central instance is actually running on another UNIX (e.g.. AIX or Solaris) I you have to move the central instance before starting PREPARE to z/OS USS. Alternatively you can run a so called MCI Upgrade: SAP Note 569821

Platform alternative: An upgrade is also possible on an INTEL Win2000 Server (if necessary)!

Add. Infos are available in composite SAP Note Installation/Upgrade SAP R/3 Enterprise 4.70, 534334, und platform specific SAP Note 517267: Additional information on upgrading to SAP R/3 Ent.4.7 DB2/390

3. Necessary PTFs and APARs:

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

SAP Note 81737 (APAR List) contains actual info to PTFs you have install before doing the upgrade. For all start release there is a PTF checker available, see SAP Note 183311. Missing PTFs can enhance heavily the upgrade times.

4. RACF or other security products:

During the upgrade there will be a temporary shadow system running with their own schemata names. The name of this system will be build with the schemata name of the source system with an additional "S" (e.g. SAPR3 will change to SAPR3S or SAPPRO will change to SAPPROS).

If you use RACF you have to to the following steps for this additional schema:

- define a Secondary-Authorization-ID
- create a RACF-Group with the same name
- all UserIDs who are communicating with the database has to registered as a member of this (<sapsid>adm und ICLIRUN) RACF-Group

Add. Info you will in

SAP R/3 on DB2 UDB for OS/390: Planning Guide.

If you use another security product, please do the corresponding steps according to your product documentation..

5. Actual downward compatible SAP-Kernel and necessary transports into the Start-Release

Please ensure that all necessary transports and minimum patch levels of actual downward compatible SAP-Kernel (AKK) has been installed in the Start-Release of your system.

In dependency of your Start-Release the transports, the release and the minimum needed Patch-Level of the kernel is described in one of the following SAP Notes:

Start-Release Number of SAP Note

4.6D 184399 (DDIC Corrections)

6.10, 6.20 407663

For Start-Release 4.6D you need the newest versions of the executables R3ldctl and R3szchk. Please copy them into the directory

/usr/sap/<SAPSID>/SYS/exe/run.

6. Indizes on SYSIBM.SYSTABLES and SYSIBM.SYSTABLESPACE

The defined indizes for the SAP-System on the catalog tables

SYSIBM.SYSTABLES and SYSIBM.SYSTABLESPACE have to be checked and, if necessary, have to be expanded. The indizes have the following names:

- SYSTABLE~0 or SYSTABLE__0
- SYSTBLSP~0 or SYSTBLSP__0

7. DB2 Performance Monitor (DB2 PM)

DB2 PM is neither necessary for the upgrade nor for the productive target system. Therefore the DB2 PM-based transaction ST04 of the Upgrade-Phase KX_SWITCH is not useable. Alternatively you can run with transaction SE38 the report RSDB3001_OLD.

8. Stored Procedures:

Beginning with 4.6B DB2 UDB for OS/390 uses Stored Procedures, DB2 Utilities StoProcs (DSNUTILS) and DB2/390 Control Center StoProcs.

The necessary prereqs and preparation are described in SAP Web Application Server 6.20 on IBM eServer zSeries: Planning Guide.

9. Check BP40, SAP Note 571721

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

10. Optional Checks SAP Note 400565

Add infos:

Necessary ICLI Upgrades: SAP Note 136806 -> FOME620 in SFOMDATA is already available?

During the upgrade the ICLI version for the source release has to run in parallel with the new ICLI version for the target release!

New R3up, trans, tp is necessary (from SAPSERVx available)

An external Package (changed Upgrade Buffer, new transports etc) have to be installed during prepare at a special place, otherwise PREPARE will fail!

For Starting and Stopping of the shadow instance you have to use new commands, a "normal" SAP Start or Stop command doesn't work (or only when used in the "correct" directory).

Please use the IFI-Collector instead of Alert Router and ICLI-Interface, beginning with 6.20 you need this new interface for data transport of OS and DB statistics into CCMS.

You have also to implement new DB2 SAP Collector Settings, you have also to bind new DB2 plans.

Recommendation for upgrade: have "enough" work datasets available!

Base SAP Notes and other add. info:

SAP Note 407325, Released Operating Systems

SAP Note 138906, Planning Info

Composite SAP Note für R/3 Enterprise: 534334

Upgrade. Additions: 517267

Define No: 422726 (Reduce number of datasets, empty tablespaces will not be allocated)

Free Space Information (database size enlargement): 517266

Troubleshooting: 529267

Corrections: 517731

Usage of J2EE with z/OS: 534949

With WAS 6.20 there is now an IDES System on zSeries available!

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

3. Whitepaper IBM "SAP BW Query Performance with DB2 on zSeries" available

A whitepaper "SAP BW Query Performance with DB2 on zSeries" is available through the IBM techdocs web site.

The Techdocs URL is <http://www.ibm.com/support/techdocs>
Search "white papers" for document number is WP100322.

The paper is a performance analysis and tuning guide for SAP BW on DB2 UDB for OS/390 and z/OS. The paper contains

- overview of SAP infocubes and DB2 star join
- key SAP and DB2 indicators for evaluating BW query performance
- process for correlating SAP performance statistics with DB2 statement statistics
- examples of SQL analysis for BW queries
- processes for identifying aggregates needed to improve performance
- examples of common problems that can occur in DB2 or zOS in an SAP BW environment

4. IBM@server zSeries with mySAP.com™ Application Components Support Matrix (updated V1.10), dated january 20, 2003 Author: Mike Sheets, IBM Americas Advanced Technical Support, msheets@us.ibm.com

In an attempt to answer initial support questions, listed below is a high level view of mySAP (SAP R/3) Application Components support of IBM@server zSeries. SAP's former "New Dimension Products" have been integrated under mySAP Business Suite.

This matrix is made available as a good faith effort. However, it does not constitute an official support commitment from IBM. A more detailed and definitive source is SAPNET (<http://service.sap.com/platforms>). Please send any corrections, updates, additions, or suggestions to Michael Sheets/Poughkeepsie/IBM@IBMUUS or msheets@us.ibm.com.

General Notes:

- Unless otherwise noted, "Supported" generally means both the mySAP DB Server (under z/OS) and Application Server functions (either under z/OS or Linux for zSeries).
- The Application Server functions on z/OS require at a minimum mySAP 4.6B, DB2 6.1, and OS/390 V2R8. Installation of early releases of these Application Components may be quite complex.

News for mySAP Business Suite on IBM eServer zSeries with database server DB2 UDB for z/OS and OS/390 Version 2004Q2, status of July 16, 2004

- Linux for zSeries mySAP.com application support started with its GA on May 17, 2002. For complete support it requires mySAP.com 4.6C SR2. Installation support, however, will commence for each application component with its next CD shipment after May 17, 2002. The next release is 6.20 (no 6.10 support is planned as that shipped earlier).
- If the Application Component exists as a separate mySAP system, it can extract data for its database from a zSeries mySAP.com system through normal SAP interfaces.
- In general industry add-ons and bolt-ons have no unique platform restrictions. They are dependent on the underlying SAP Technology.

mySAP Application Component	zSeries Support Status	Date	SAP Technology
Advance Planning Optimization¹			
APO 3.0A SR3	Supported (but see footnote 1)	GA 9/01	4.6D
APO 3.10	Supported (but see footnote 1)	GA 11/01	4.6D
APO 4.0	Planned (but see footnote 1)	GA 2Q03	6.20
Business Warehouse			
BW 2.1C	Supported	GA 12/00	4.6D
BW 3.0A	Supported	GA 1/02	6.10
BW 3.0B	Supported	GA 9/02	6.20
BW 3.1C	Supported	GA 12/02	6.20
Enterprise Buyer Professional and Customer Relationship Management			
EBP/CRM 2.0C SR1	Supported	GA 4/01	4.6D
EBP/CRM 3.00	Supported	GA 7/01	6.10
CRM 3.10	Supported	GA 11/02	6.20
EBP 3.5	Supported	GA 10/02	6.20
EBP 3.5 SR1	Planned	1Q03	6.20
Corporate Finance Management			
CFM 4.6C	Supported	GA 5/00	4.6C
Knowledge Warehouse (Knowledge Management)			
KW 5.0	Supported ²	GA 10/00	4.6D
KW 5.1	Supported ³	GA 11/00	4.6D

¹For zSeries, only DB and limited non-APO (e.g., upgrade) CI functions are supported. LiveCache requires NT or UNIX. APO application functions require LiveCache so they cannot run on zSeries.

²ContentServer on SAPDB on NT.
