Development goal: Early feedback

TVT   TVT   MVT

pGA

Team Requirement:
- Understanding of test suite and execution progress
- Automatic, continuous execution of tests

Tool Requirements:
- Support distributed teams
- Support many parallel releases

Test Management

- Governance
- Store and organise the test cases
- Define test plans (prod, support, agile, waterfall)
- Measure execution

- Portal 7.0 test effort
  - One complete test run
    - 8,824 test cases
    - Equivalent of 1,950 days manual testing

 - Total test effort
    - Equivalent of 3750 days manual testing

Continuous Integration

- Continuous integration provides the mechanism for frequent, automatic feedback

- Requirements may change for a global team and their processes
- Acts as global radiator

Tool deployment in large, established teams

Open source, buy or build?

Could your customers use your tools too?

Agile does scale well to large, established, global teams

Bring feedback earlier in the cycle
Understand your tooling requirements and solve them iteratively
Large scale transformation takes time

We just released a beta for WebSphere Portal 8.0. You should try it!

Thank you!
