

PureSystems

Changing the economics
and experience of IT

IBM PureApplication System

Highly available and scalable web application platform

Changing how On-Premise Cloud and IT infrastructure are provisioned

Richard Vowles & Tony Peterson - IBM

The IBM PureSystems family

You can build cloud simpler, faster and with less risk with pre-integrated and optimized capabilities

PureSystems

Flexible cloud infrastructure

PureApplication

*Simplified cloud
application lifecycle*

Flexibility

Build it

Speed and Simplicity

IBM PureApplication System: the ideal cloud application platform

Expert Integrated System:

Integration by design

- Application server
- Database services
- Integrated infrastructure

Built-in expertise

- Infrastructure, platform, and application patterns

Simplified experience

- Simplifying lifecycle deployment and management of applications
- Single point of management

PureApplication
Cloud Application Platform (PaaS)

Driving built-in expertise with IBM's patterns of expertise

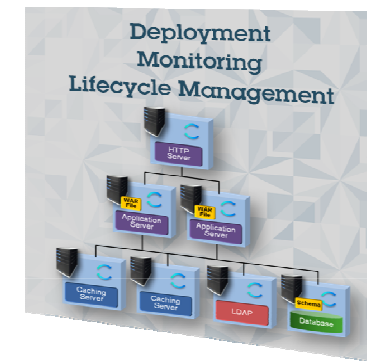

What the business wants...

What's required...

What a pattern automates...

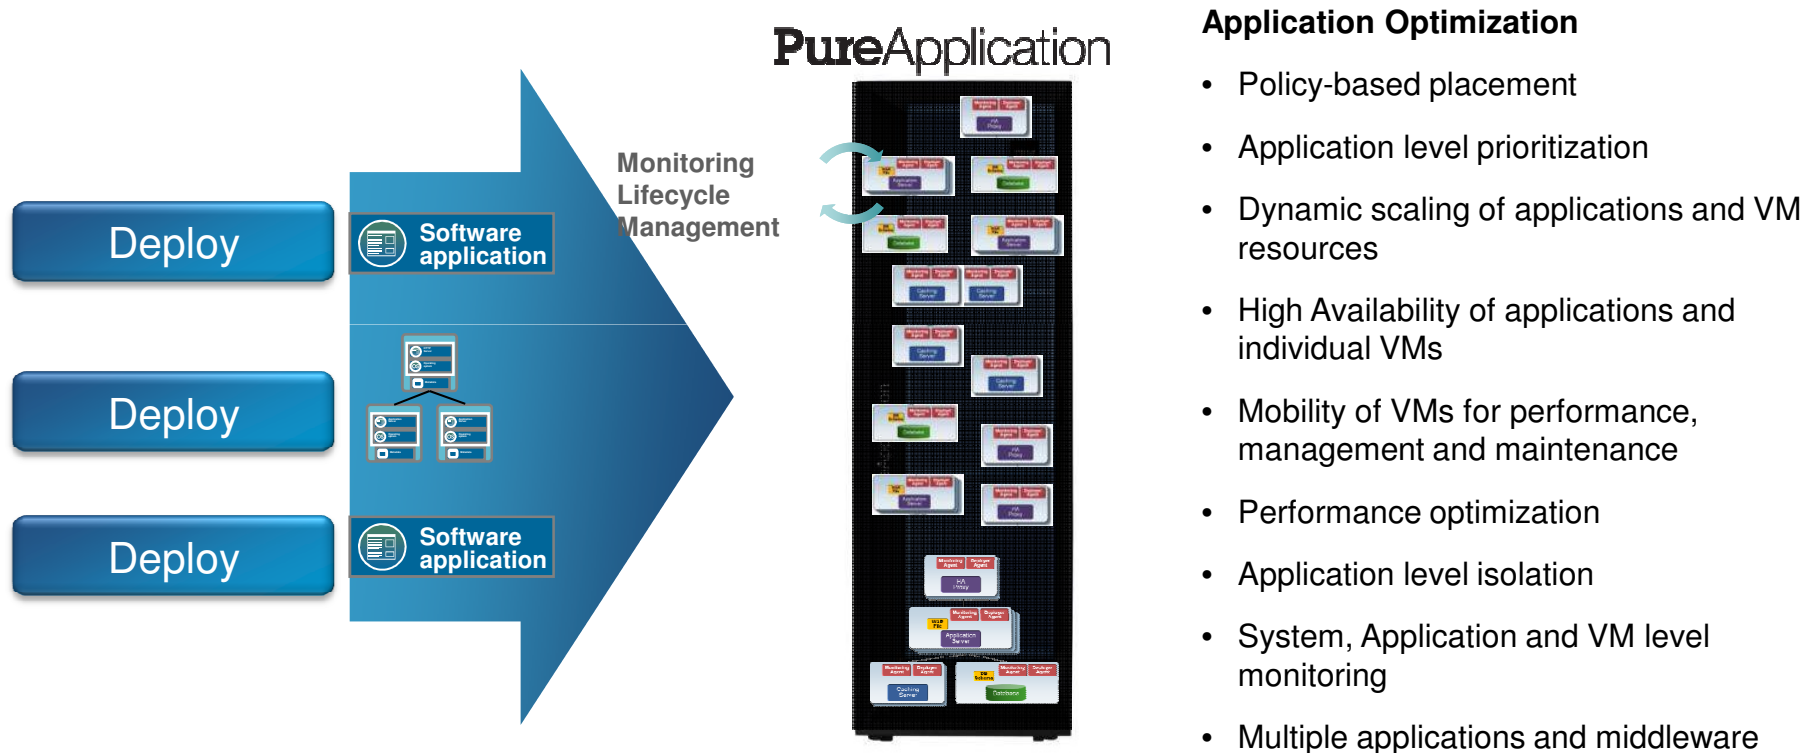

Patterns include:

- Application topology
- Pre-integrated across components
- Pre-configured & tuned
- Pre-configured monitoring & security
- Pre-installed on an operating system
- Lifecycle Management

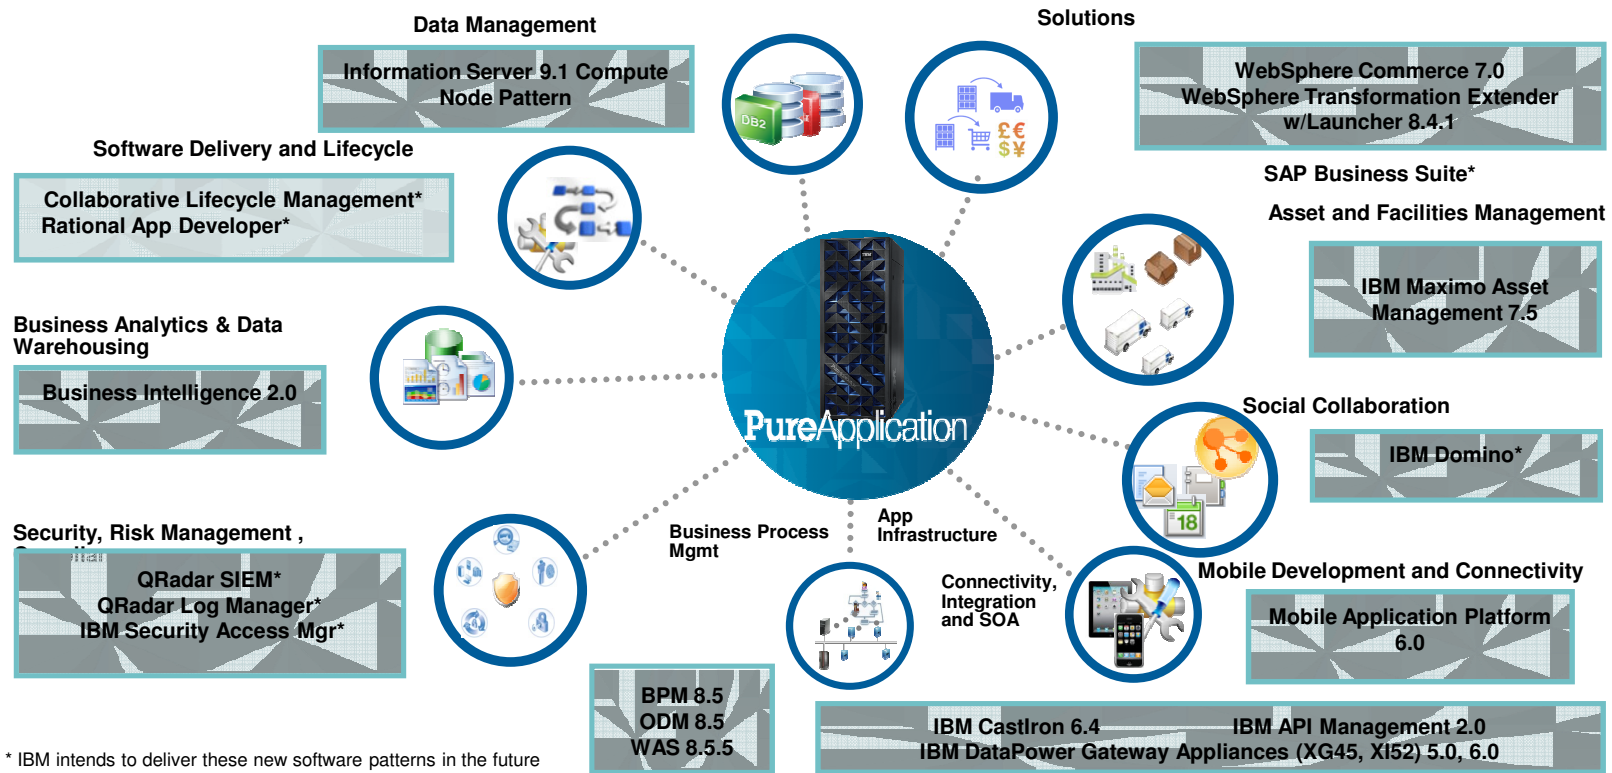

- Expertise
- Repeatability
- Simplicity
- Agility
- Governance
- Elasticity
- Efficiency

PureApplication System: Continuous application level optimization and management

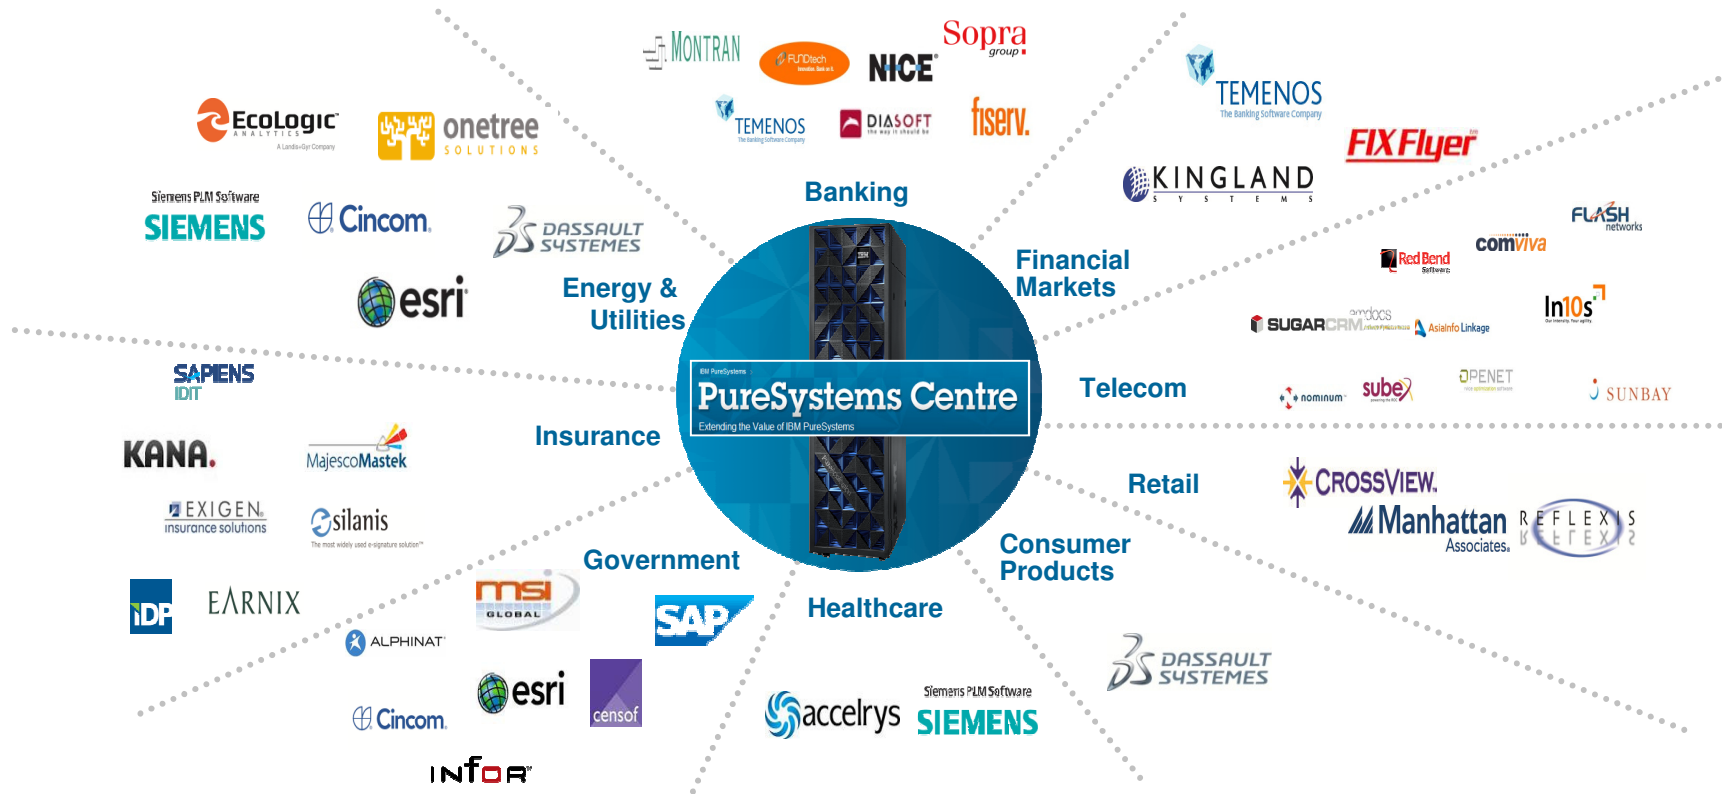

IBM Patterns of Expertise Optimize Leading Software Capabilities for PureApplication System

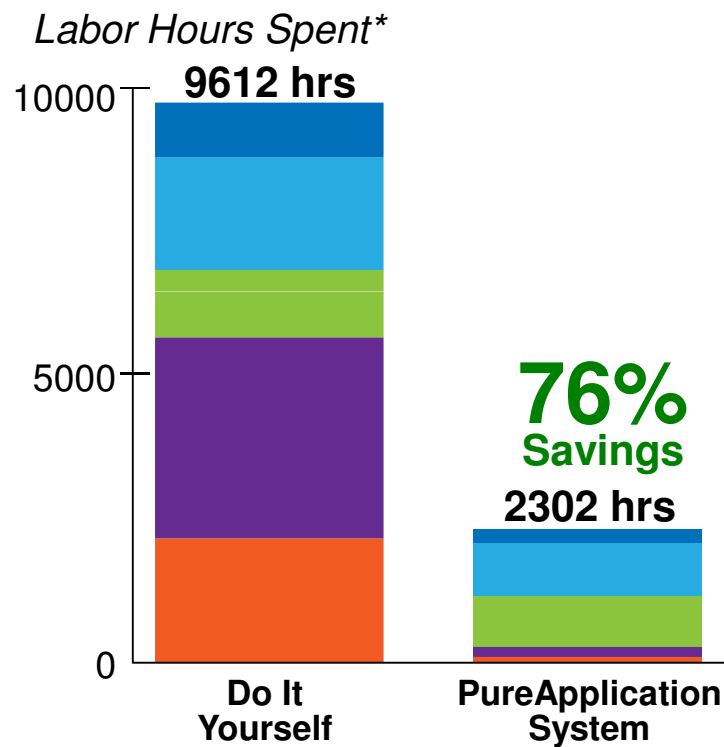

* IBM intends to deliver these new software patterns in the future

“Patterns of Expertise” covering breadth of industries

Example: IBM PureApplication System savings across the IT lifecycle

- Deployment**
Fully assembled and configured
Pre-installed management software
Fast pattern-based deployment
- Incident/capacity management**
Centrally monitor and resolve issues
Automatic scaling
- Asset management**
Track license usage of products
- Security management**
Centralized access control
- Change management**
Visibility into relationships of virtual images in a workload
Automatically apply changes to desired virtual servers

*Note: Do It yourself used 9 blades (144 cores). IBM PureApplication System used 3 nodes (96 cores). Each system has the capacity to run 72 workloads where each workload can sustain a peak throughput of 1720 page elements per second.

PureApplication System Demonstration

Tony Peterson - IBM
