**Note!**

Before using this information and the product it supports, be sure to read the general information under "Notices" on page vii.

### **Third edition (March 1999)**

This edition applies to Release 3 of CICS Transaction Server for OS/390, program number 5655-147, and to all subsequent versions, releases, and modifications until otherwise indicated in new editions. Make sure you are using the correct edition for the level of product.

The CICS Transaction Server for OS/390 Release 2 edition remains applicable and current for users of CICS Transaction Server for OS/390 Release 2, and may be ordered using its order number, LY33-6090-01.

Order publications through your IBM representative or the IBM branch office serving your locality. Publications are not stocked at the address given below.

At the back of this publication is a page entitled "Sending your comments to IBM". If you want to make comments, but the methods described are not available to you, please address them to:

IBM United Kingdom Laboratories, Information Development,  
Mail Point 095, Hursley Park, Winchester, Hampshire, England, SO21 2JN.

When you send information to IBM, you grant IBM a nonexclusive right to use or distribute the information in any way it believes appropriate without incurring any obligation to you.

## Preface

This manual is supplementary to the CICS® *Data Areas* manual. It contains data areas (control blocks, parameter lists and constants) that are part of the CICS product implementation. These data areas may be useful for tasks such as CICS problem diagnosis, performance monitoring, and tuning. These data areas are intended for use by only a limited set of users involved in designing products complementary to CICS that perform one of these specialized tasks and require this information, which can be expected to change with subsequent releases of CICS.

Most products can be designed without using the information provided by this manual, because they can use the facilities provided by the extended CICS API (for example, the EXEC CICS INQUIRE/SET commands), and the exit programming interface (XPI) provided by CICS.

This manual is not needed by CICS application programmers, nor is it required when requesting assistance from the IBM® Service organization.

Licensees are allowed to copy information derived from this manual into the source code of their products.

## Chapter 1. CTS 390 1.3 Supplementary Data Areas

---

### How the data areas are presented

The data areas are listed in alphabetical order of their shortened names. The shortened name usually, but not always, matches the first few characters of the data area name, disregarding the DFH prefix; for example DFHTCA is shortened to TCA. Some data areas are grouped together according to usage. If you do not find a data area under the expected short name, you should look in the table of contents or the index for the full name of the area or for the name of the macro or copy book that generates the area.

For each field in each data area, the following information is listed:

- The hexadecimal offset, in parentheses
- The data type and for bitstring values, the bit representation
- The length in bytes (decimal)
- The name (symbolic label)
- A brief description of the function

Where the name of a field is shown as an asterisk ( \* ), the field is reserved.

Where bit settings are indicated, the symbolic labels that have been equated to the bit settings are given. These labels are used to refer to the numeric values in programs that use the data area, and are included in this book to help you understand the program listings. The offset given for one of these fields applies only to the symbolic label assigned to the field as a unit; it does not apply to the labels equated to bit settings (hex values).

Where a storage definition has a duplication factor, for example DCREGS (16), the length of the field is the length of each element of the storage. The total length of the storage is this length multiplied by the duplication factor which is shown in parentheses after the name.

For EQUATE statements, the operand is shown in quotation marks in the description.

### Use of the index

- All fields are listed in the index at the back of this book.
- Each field name listed in the index is followed by:
  - the hexadecimal offset of the field, shown in parentheses,
    - If the field name applies to a bit value, this is indicated by the word **BIT** in place of the hexadecimal offset.
  - the field length, shown in square brackets,
  - the short name of the area in which it appears,
  - and the page number.

Use the index to find where this book shows the field that you are seeking, in a Data Area. Don't use the index for anything else — for example, you will probably not find enough information in the index to diagnose a problem.

## APLI Language interface work area

The Language Interface Work-Area is acquired by the Transaction Manager (XM) Domain during initial processing for the task. The area is built in the storage key defined by the TaskDataKey value of the Task definition.

If the length of this area changes, take great care to ensure that all modules affected either directly, or indirectly via DFHAPCOM or the change in length to language\_interface\_workarea, are re-compiled.

CONTROL BLOCK Name = DFHLIWAC  
 DESCRIPTIVE NAME = CICS Language interface Work Area  
 This Copy Book describes the common work area used for communications between CICS and the various run-time language environments.  
 FUNCTION = Interface between CICS and the Language Environments.  
 LIFETIME = Task  
 Storage CLASS = TaskDataKey.  
 LOCATION =  
 Addressed from the SYSTEM TCA by TCACEEPT.  
 Notes :  
 Dependencies = S/370  
 Restrictions =  
 Module Type = Control block definition

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	692	LANGUAGE_ INTERFACE_ WORKAREA	

The following area will hold the Thread Tokens used by Cobol II, C/370 and LE/370: and the addresses of any Thread work-areas acquired by use for C/370 or LE/370.

(0)	CHARACTER	8	COBOL2_ THREAD_TOKEN

### Constants

Len	Type	Value	Name	Description
2	CHARACTER	P	BAPR_PROCESS_RECORD_TYPE	
2	DECIMAL	1	BAPR_PROCESS_INSTANCE_VER_1	

The length occupied by a Process object in a repository record is currently set as 200 bytes. This leaves some space should the data in the flat form of the object need to increase.

4	DECIMAL	200	FLAT_PROCESS_LENGTH	
---	---------	-----	---------------------	--

A dummy based variable is declared to provide a compile time check that the flat length is sufficient to accommodate the real object.

4	DECIMAL	40	FLAT_PROCESS_SPARE	
---	---------	----	--------------------	--

Changing these structure types will affect the format of the repository file records. Alter with care, and remember to consider the impacts on the Repository File Batch Utility - DFHBARUP.

This is a very important type within the Activity Class.

For an activity, it associates a parental activity name (how the activity program of a parent refers to a child activity), with the token to the activity state in the dataset (Repository File) and any in-memory instantiation of the activity that might exist.

Each activity may contain many instances of this type.

relative\_ activity\_id  
 how the activity is identified in the dataset  
 act\_add  
 address of start of this activity object

parent  
 identification of this activity's parent  
 children  
 identification of child activities in the child\_ set.

The length occupied by an Activity Set Element in a repository record is currently set as 80 bytes. This leaves some space should the data in the flat form of the object need to increase.

A dummy based variable is declared to provide a compile time check that the flat length is sufficient to accommodate the real object.

Lifetime of this storage is cics lifetime.

If the attach is done using DFHBRAT, the BRPC is create by DFHBRAT on an attach, and destroyed by DFHBRRM on transaction completion.

If it is created as part of piggy backing by another XM client the bridge will take a copy of the information. Ideally we should create the BRPC using a macro as this brakes domain rules. However the domains are tightly coupled so this is not an urgent problem.

We have a brpc\_ version in case the primary client is ever shipped.

## CAUTR CICS affinities utility trace table

What follows defines the CAUTrace class.

The CAUTrace class manages a trace table. This trace table is MVS GETMAINed. Each trace entry added to the table is a fixed length, 32 bytes. There are three formats of trace entry (see the signatures associated with method AUTR\_PUT for further details). Each contains a time stamp. Since the trace table wraps once it been completely filled up, the time stamp can be used to determine the newest entry.

The CAUTrace class supplies the following basic methods:

- ATR\_CREATE - create and initialise the trace table.
- ATR\_DESTROY - destroy the trace table.
- ATR\_PUT - write a trace entry to the table.
- ATR\_GET\_SIZE - return the size of the table.

See the method signatures for further details.

The CAUTrace class is used by the Transaction Affinities Utility to trace events and errors that occur while the utility is executing. Normal CICS tracing cannot be used by the CAU exit programs as it imposes too high an overhead and may cause loss of control. The trace table is output as part of a CICS system dump (use the parameter AU on the VERBEXIT to format the table) and as part of a transaction dump if the abend is associated with the Affinities Utility, that is, if the abend code is of the form AUxx.

The CAUTrace class has no instance data as there are no instances of this class. All data is stored in class data and is accessed by class methods. It only has internal methods.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	DeclareClass	4	CAUTRACE	
<b>INSTANCE DATA</b>				
<b>Declared Data</b>				
(0)	CHAR Private	4	*	

The CAUTrace class data consists of the wrap-around trace table, the current position in the table, and an eye-catcher.

## CCGD Catalog static storage

Module Name = DFHCCGD  
 DESCRIPTIVE NAME = CICS/MVS Catalog Global Definitions.  
 Function =  
 These are the common definitions for DFHCCCC and DFHCCDM

Notes:  
 Dependencies = S/370  
 Restrictions = none  
 Register Conventions = domain standard (no special usage)  
 Patch Label = n/a  
 Module Type = n/a  
 Attributes = n/a

Storage

Catalog's storage consists of :  
 "Static" storage, which is GETMAINed during DFHCCDM  
 initialisation and lasts until FREEMAINed during  
 DFHCCDM termination.  
 This storage is DECLARed in this copybook, which is  
 included in DFHCCCC and DFHCCDM. This storage contains  
 the anchor block.  
 Automatic storage which is acquired each time a call is  
 made to DFHCCCC or DFHCCDM.  
 This storage is defined by the DECLAREs made in DFHCCCC  
 and DFHCCDM.  
 Catalog's anchor block  
 based on anchor CCANCHORP, double word aligned.  
 anchor defined in DFHKERN TYPE(DOMENTER)  
 storage GETMAINed during catalog's initialization  
 Catalog's static storage based on CCANCHORP, double word  
 aligned.

1. Area whose size is known at PL/AS compile time.  
 Pointers to ACB, array of RPLs, array of buffers.  
 Catalog's status variables  
 Array of per thread variables
2. Areas whose size is not known until assemble time  
 Array of buffers (one per thread)  
 ACB  
 Array of RPLs (one per thread)

Macro parameter settings  
 MAX\_DATA\_LENGTH must be set to the length used when the  
 DFHCCD dataset was defined, minus the length of the VSAM key.

## CPCPS Cpi-c conversation control block

```

CONTROL BLOCK NAME = DFHCPCPS
DESCRIPTIVE NAME = CICS/ESA
    CPI-C Conversation Control Block (CPC)
    & log data records
FUNCTION =
    To provide CPI-C's principal control block record structure
    There is one instance of a CPC per CPI-C conversation.
    A CPC contains conversation identifier and control
    information relating to its CPI-C conversation.
    At various stages during the lifetime of a CPI-C
    conversation the CPC will be associated with a session
    control block (TCTTE) which will act as the CPI-C
    conversations principal facility for communication.
LIFETIME =
    The lifetime of a single CPI-C conversation
STORAGE CLASS =
    The CPC will exist in CICS main (31bit) storage.
LOCATION =
    All CPCs associated with a single task are chained from
    the system TCA at TCACPCCN.
INNER CONTROL BLOCKS =
    A further record definition is included in this copybook
    for CPIC_LOG_DATA. This control block is addressed via
    a pointer in the CPC named "log_data_buffer_ptr".

## CPSPS Cpi static storage area

CONTROL BLOCK NAME = DFHCPSPS  
 DESCRIPTIVE NAME = CICS CPI Static Storage Area  
 FUNCTION =  
 This control block provides the global information for the CPI which must be around for the duration of the CICS execution.  
 It contains:  
 CPI initialization suspend token  
 CPI status  
 Entry points of CPI modules  
 CPI-C last conversation-id  
 LIFETIME =  
 The control block is created during CICS initialisation by DFHSIB1, and exists for as long as the CICS system.  
 STORAGE CLASS =  
 The control block is in subpool DFHAPDANY  
 LOCATION =  
 The CPI Static Area is located by field SSZCPI in DFHSSAPS  
 INNER CONTROL BLOCKS = None

(10)	ADDRESS	4	FRST	Pointer to first
(14)	ADDRESS	4	LAST	Pointer to last
(18)	FULLWORD	4	NOEL	Number of elements
(1C)	FULLWORD	4	ELEN	Element length

End of AVL2 Header structure

AVL2 Node structure for instance:  
 AVLTREE

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	*	NODE	
(0)	CHARACTER	16	HDR	
(0)	ADDRESS	4	LEFT	Left child
(4)	ADDRESS	4	RITE	Right child
(8)	ADDRESS	4	PAPA	Parent
(C)	FULLWORD	4	BFAC	Balancing factor
(10)	CHARACTER	*	DATA	Data portion

## DDCBC Directory manager structures

Directory Manager Domain Structures and Constants.  
The Directory manager anchor block and other internal directory structures are described below.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	56	DDA	
The Directory Manager Anchor Block				
(0)	CHARACTER	16	DDA_PREFIX	
(0)	HALFWORD	2	DDA_LENGTH	Structure length
(2)	CHARACTER	1	DDA_ARROW	>
(3)	CHARACTER	3	DDA_DFH	DFH
(6)	CHARACTER	2	DDA_DOMID	DD
(8)	CHARACTER	8	DDA_BLOCK_NAME	ANCHOR
(10)	CHARACTER	8	DDA_IDIRECTORYCLASS	
(10)	ADDRESS	4	DDA_DIRECTORY_LIST	
(14)	UNSIGNED	1	DDA_STATE	Directory header chain
(15)	CHARACTER	3	*	Directory Manager state
(18)	CHARACTER	32	DDA_CICS_BITS	Reserved
(18)	CHARACTER	8	DDA_GENERAL_SUBPOOL	
(20)	CHARACTER	8	DDA_BROWSE_SUBPOOL	Directory general subpool
(28)	ADDRESS	4	DDA_GLOBAL_LOCK	Directory browse subpool
(2C)	BITSTRING	1	*	Directory global lock
			DDA_COLD_START	Was it a cold start
(2D)	CHARACTER	3	*	Reserved
(30)	CHARACTER	4	*	Reserved
(34)	CHARACTER	4	*	Reserved
(38)	CHARACTER		DDA_END	

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	72	DIRHEAD	
A Directory Header structure. There is one of these for each directory. It is created by the Directory manager CREATE_DIRECTORY function, and is chained on to the list of directories in alphabetical order. It lasts until CICS terminates.				
(0)	CHARACTER	16	DH_PREFIX	
(0)	HALFWORD	2	DH_LENGTH	Structure length
(2)	CHARACTER	1	DH_ARROW	>
(3)	CHARACTER	3	DH_DFH	DFH
(6)	CHARACTER	2	DH_DOMID	DD
(8)	CHARACTER	8	DH_BLOCK_NAME	DIR_HEAD
(10)	CHARACTER	20	DH_CICS_BITS	
(10)	ADDRESS	4	DH_NEXT	Next directory in chain
(14)	ADDRESS	4	DH_PREV	Previous directory in chain
(18)	ADDRESS	4	DH_LOCAL_LOCK	Directory local lock
(1C)	CHARACTER	8	DH_SUBPOOL	Fixed length subpool
(24)	CHARACTER	8	DH_IDIRECTORY	
(24)	CHARACTER	4	DH_DIRNAME	Directory name
(28)	FULLWORD	4	DH_DIRKEYLENGTH	Key length (4 to 252)
The Lookup Map section of the Directory Header. This holds the information for fast location of an entry name				
(2C)	CHARACTER	16	DH_ILOOKUPMAP	
(2C)	FULLWORD	4	DH_HASHSIZE	Size of the hash table
(30)	FULLWORD	4	DH_HASHELEMS	Current number of entries
(34)	ADDRESS	4	DH_HASHTABLE	Address of hash table
(38)	BITSTRING	1	*	
			DH_REHASH	Rehash required flag
(39)	CHARACTER	3	*	Reserved
The Browse Seq section of the Directory Header. This holds the information used for browsing the directory				
(3C)	CHARACTER	12	DH_IBROWSESEQ	
(3C)	FULLWORD	4	DH_DELETES	Number of deletes
(40)	ADDRESS	4	DH_CURRENT_BROWSES	
(44)	ADDRESS	4	DH_BROWSETREE	Browses on this directory
(48)	CHARACTER		DH_END	The browse tree

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	12	HASHELEM	
A hash chain element. One exists for each entry name in each directory. It is created by the ADD_ ENTRY function, and is chained on to the collision list from the hash table. It is destroyed by the DELETE_ ENTRY function.				
(0)	ADDRESS	4	HE_NEXT	Next on collision list
(4)	CHARACTER	8	HE_TOKEN	Corresponding data token
(C)	CHARACTER		HE_NAME	Variable length key name

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	16	HASHSTRUCT	
The hash table structure. There is one of these for each directory, created either by the CREATE_ DIRECTORY function, or by the ADD_ ENTRY function when performing a dynamic re-hash. It is destroyed during a dynamic re-hash.				
(0)	CHARACTER	16	HS_PREFIX	
(0)	HALFWORD	2	HS_LENGTH	Structure length
(2)	CHARACTER	1	HS_ARROW	>
(3)	CHARACTER	3	HS_DFH	DFH
(6)	CHARACTER	2	HS_DOMID	DD
(8)	CHARACTER	8	HS_BLOCK_NAME	HASH_TBL
(10)	CHARACTER		HS_HASHTABLE	The actual hash table

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	292	BROWSE_VAL	
This structure holds the information for a browse on a particular directory. The structure is created by the Directory manager START_ BROWSE function, and is chained on to the list of current browses if not in task_ related storage. It is destroyed by the END_ BROWSE function, or if task_ related, at end-of-task.				
(0)	CHARACTER	16	BV_PREFIX	
(0)	HALFWORD	2	BV_LENGTH	Structure length
(2)	CHARACTER	1	BV_ARROW	>
(3)	CHARACTER	3	BV_DFH	DFH
(6)	CHARACTER	2	BV_DOMID	DD
(8)	CHARACTER	8	BV_BLOCK_NAME	BRWS_VAL
(10)	ADDRESS	4	BV_NEXT	Next browse_val in list
(14)	ADDRESS	4	BV_PREV	Previous browse_val
(18)	FULLWORD	4	BV_OLDDELETES	Deletes after get next
(1C)	ADDRESS	4	BV_OLDDCRSOR	Cursor after get next
(20)	BITSTRING	1	BV_FLAGS	
			BV_ON_NAME	Are we on a name yet
			BV_DONE_GETNEXT	Have we done a getnext
			BV_TASK_RELATED	Task-related browse?
(21)	CHARACTER	3	*	Reserved
(24)	CHARACTER	256	BV_OLDNAME	Name after last get next
(124)	CHARACTER		BV_END	

## Constants

## DMAFC Dm authorised facility state

-

DFHDMAFC

DFHDMAFC is the copy book that defines the domain manager authorized facility state and interface.

The domain manager authorized facilities are provided to the CICS address space. This state is anchored in the AFCB.

When an ENFREQ ACTION=LISTEN request is issued MVS returns a token that uniquely identifies the listen request. This token must be specified on the ACTION=DELETE request. These tokens will be stored in key 0 storage to ensure that CICS will not delete some other subsystems listen requests. A slot in the AFCB will be required to anchor the domain manager key 0 state. The address of the AFCB will be passed as the PARM on the ENFREQ ACTION=LISTEN.

ENF_NOTIFY_ELEM

Notify elements are passed from the ENF SRBEXIT to the ENF
listening task. ENF notify elements are allocated from CICS key
subpool 250 storage by the SRB, and are freed by the listening
task. These elements take the following format
```

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	24	ENF_ELEM	
(0)	UNSIGNED	2	ENF_ELEM_LENGTH	
(2)	CHARACTER	14	ENF_ELEM_EYE	
(10)	ADDRESS	4	ENF_ELEM_NEXT	
(10)	ADDRESS	4	ENF_ELEM_LISTENER	
(14)	UNSIGNED	4	ENF_ELEM_CODE	

### Constants

Len	Type	Value	Name	Description
4	DECIMAL	1	NUMBER_OF_ENF_EVENTS	
4	DECIMAL	2147483647	UNKNOWN_EVENT	

## DSANC Dispatcher domain anchor block

```
CONTROL BLOCK NAME = DFHDSANC
DESCRIPTIVE NAME = CICS Dispatcher Anchor Block
FUNCTION =
    This include contains the definition of the Dispatcher
    Anchor Block. It also contains definitions of the DS_TCB,
    Sub_dispatcher, Stimer and Authorised blocks. See below
    for descriptions.
    The anchor block contains all dispatcher-related information
    that is not task, or suspend_resume_area specific.
LIFETIME =
    Dispatcher Lifetime.
STORAGE CLASS =
    OS Getmained from subpool 0.
LOCATION =
    Held by Kernel
INNER CONTROL BLOCKS =
    DS_TCB contains information associated with particular MVS
    TCBs controlled by the Dispatcher. This consists mainly of
    wait related data, eg the wake up ecb for the TCB.
    There is also a macro included here to post the wake up ecb
    of a particular TCB.
    Sub_dispatcher data is associated with one particular mode.
    Currently there is only one TCB per mode, but in case of
    more being introduced, we should distinguish between TCB
    and mode-related data. The key data is concerned with
    the dispatchable chain of tasks with the sub-dispatcher's
    mode.
    The STimer block contains an array of blocks to associate
    with the up to 11 outstanding stimer calls that can be
    issued by dispatcher.

AP_INTERFACES Fields used in servicing the AP domain				
(94)	CHARACTER	4	AP	
(94)	ADDRESS	4	CSA_ADDRESS	Addr of the CICS CSA
ECB queue This chain is for aliens to chain requests to the dispatcher for a service. This is to be used when DFHXMP (in the FOR) wants the AOR to post an AOR ECB. Rather than doing an MVS post (with the overhead of an SRB) it will queue the request so the local dispatcher can do a local post or, even better, do a hand post. This chain will be serviced by DFHDSTCB just before its dispatcher scan.				
(98)	CHARACTER	8	ECB_Q_DW	Double Word for CDS
(98)	ADDRESS	4	Z_ANCHOR	Anchor for ECB Q chain
(9C)	UNSIGNED	4	Z_NUMBER	Number in Queue
Special tasks area. This area keeps track of the special task CSTP. This tasks can issue special WAITs, and we must note when these special requests have been issued.				
(A0)	CHARACTER	12	SPECIAL_AREA	
(A0)	CHARACTER	12	CSTP_AREA	
(A0)	ADDRESS	4	CSTP_TASK_REF	TCP's task block
(A4)	ADDRESS	4	CSTP_ECB_LIST	TCP's ecb list
(A8)	BITSTRING	1	CSTP_FLAGS	TCP's flags

	.1.. ..		CSTP_MUST_DSP	CSATCPEV was set
	..11 1111		*	reserved
(A9)	UNSIGNED	3	*	
The Executable Chain. This chain is a list of all currently attached tasks. It is used to implement the AMAX,Interval,and Timeout scans. Task detach requires that an element be removed from the middle of this chain. Because of this, only one TCB is allowed to browse this chain at a time. If another TCB finds the chain 'locked' it can assume that the tcb that is currently scanning the chain will perform any required operations on the behalf of all tcbs. A Compare and Swap "push" to the top of the chain is always allowed.				
(AC)	CHARACTER	4	EXECUTABLE_CHAIN	
(AC)	ADDRESS	4	EXECUTABLE_HEADER

(F8)	ADDRESS	4	FREE_CHAIN_PTR	
(FC)	UNSIGNED	4	FREE_CHAIN_COUNT	

Offset Hex	Type	Len	Name (Dim)	Description
Hand Postable Chain. Define all fields relating to the anchor portion of the hand postable Q. Tasks on this Q expect that their ECB'S can be posted by an OI of the post bit in the ECB.				
(100)	CHARACTER	24	HAND_POSTABLES	the hand postable q
(100)	ADDRESS	4	HAND_POSTABLE_CHAIN	Anchor for hpq
(104)	ADDRESS	4	HPT_LAST_PTR	Last entry in HP chain
The following fields (hpt_wait_list_xxx) describe the wait list used by the quasi-reentrant (QR) TCB when invoking the MVS WAIT during partition exit. The list consists of the wakeup ecb, other special ecb's, and all waiting OLD_WAIT ecb's being waited on by tasks in the handpostable chain				
(108)	ADDRESS	4	HPT_WAIT_LIST_START	Actual beginning of list
(10C)	ADDRESS	4	HPT_WAIT_LIST_END	First byte "AFTER" the end of the wait list
(110)	ADDRESS	4	HPT_WAIT_LIST_CURSOR	Ptr -> the next available slot in the wait list
(114)	UNSIGNED	2	HPT_WAIT_LIST_SIZE	How many ECBs the wait- list will hold.
(116)	UNSIGNED	2	*	Reserved
(118)	CHARACTER	8	DELAY_QUEUE	
The delay queue consists of tasks which have received a resume request which we wish to delay until either a specified interval has expired, or CICS has nothing better to do. This facility is used by high priority server tasks such as CSNC which do not necessarily want to be awoken as soon as requests arrive. This allows a CICS server task to achieve batching under the CICS TCB, this method of batching is separate from that used to reduce the MVS dispatching overhead, the delay queue is intended to offer a mechanism for server tasks to reduce the CICS dispatching overhead.				
(118)	ADDRESS	4	DELAY_QUEUE_HEAD	head of chain of tasks
(11C)	CHARACTER	4	DELAY_QUEUE_TIME	earliest delayed work
TIME Fields				
(120)	CHARACTER	80	TIMER	
(120)	CHARACTER	8	CURRENT_TIME	system time
(128)	CHARACTER	8	NEXT_CE_TIME	Next time the check_executables routine is due
(130)	CHARACTER	8	NEXT_SHP_TIME	Next time the hand_postable_scan (quasi-reent function) is due
(138)	CHARACTER	8	NEXT_TIMEOUT_TIME	Earliest time for deadlock timeout since last timeout
(140)	CHARACTER	8	NEXT_TI_EVENT	Next scheduled event for the timer domain. This is set by the ?DFHTITST macro in DFHDSTCB
(148)	CHARACTER	8	EXPIRATION_TOKEN	input to DFHTITST macro
(150)	CHARACTER	8	NEXT_TCP_DISPATCH_TIME	
(158)	CHARACTER	8	DSCSA_WORK	work area for DFHDSCSA
(160)	CHARACTER	8	SAVED_NEXT_TCP_DISPATCH_TIME	
(168)	UNSIGNED	4	QR_CPU_PERCENT	value of next_tcp_dispatch_time while cstp_waiting is off
(16C)	CHARACTER	4	*	Percent cpu usage by QR TCB
(170)	CHARACTER	8	PHS1_PRIORITY	Reserved
(170)	BITSTRING	4	PHS1_PRIORITY_HIGH	
(174)	UNSIGNED	4	PHS1_PRIORITY_LOW	
(178)	CHARACTER	4	KERN_ANCHOR	KE domain anch
(17C)	UNSIGNED	1	NEXT_FREE_SUBD	index of next free sub_disp array element
(17D)	CHARACTER	3	*	reserved

Offset Hex	Type	Len	Name (Dim)	Description
<p>The mode/sub_dispatcher control blocks A SUB_Dispatcher is responsible for a given disp. "mode". It contains a list of dispatcher tcbs owned by this mode, a Dispatchable Q that is a list of tasks that are ready to be dispatched. ( ie not suspended ) And a set of flags representing the state for this sub dispatcher. In this release, there is exactly one tcb for each sub_disp. The Modes in CICS 3.1.1 are: 1. QR: Quasi-Reentrant. This mode runs all old CICS non-reentrant code. It also runs all application code. RO: Resource Owning Tasks switch to this mode to perform operations that will tie up a TCB for a long period of time. An example open and close files or perform any BLDL operations. Tasks running in this mode run concurrently with any other tasks in the system. CO: Concurrent Mode. Tasks running in this mode run concurrently with any other tasks in the system. Tasks in this mode are expected to give control back to the dispatcher in a reasonable time. CO mode can be viewed as a superior VSAM subtask mode. The current users of CO mode are all the old VSAM subtask users. TSP,FCP,TDP and JCP and domain service tasks, eg for TI and SM. In CICS 3.3 the following TCB was added: SZ: Secondary LU support mode. Tasks running in this mode run concurrently with any other tasks in the system. This mode is used by tasks processing EXEC CICS FEPI requests. This mode is NOT for general purpose use, but is reserved exclusively for use by the secondary LU support code. In CICS 4.1 the following TCB was added: RP: ONC/RPC support mode This mode is used by tasks using the ONC/RPC feature and is intended as a tactical solution only. In CICS 4.2 the following TCB was added: FO: file open/close mode This mode is used rather than RO mode to avoid the possible delay caused to other tasks when migrated files are opened (takes a long time). The sub_dispatchers are implemented as a 6 deep array within the dispatcher anchor block. The array indexes (1..6) correspond with (QR,RO,CO,SZ,RP,FO) modes</p>

(31)	UNSIGNED	3	NEXT_ID	next available value in current range
(34)	CHARACTER	1	*	reserved
(35)	UNSIGNED	3	LAST_ID	highest available value

Double Chains.

A Double Chain is a type of linked list that is designed to provide a sorted list of tasks whilst allowing concurrent push/pop operations on it from multiple TCBS.

It consists of 2 linked lists. These are described as the "front" and the "back" halves of the Q.

Any TCB can "push" a new element onto the "Front" half with a Compare and Swap instruction.

When a TCB wants to pop a task of the Q, it "hides" the frontq by zeroing the frontq ptr. Any future pushes to the front half therefor start a fresh front half.

The TCB then sorts and merges the tasks from the hidden front half down onto the back half.

The back half then consists of a list of tasks sorted in priority Order.

The Dispatchable chain is implemented as a double chain.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	8	DOUBLE_CHAIN	
(0)	ADDRESS	4	FRONT_PTR	Publicly appendable half
(4)	ADDRESS	4	BACK_PTR	Hidden/sorted half

Stimer Block  
The block of storage needed for the STIMER times and tokens

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	296	STIMER_BLOCK	
(0)	CHARACTER	16	SB_EYE_CATCHER	eye catcher
(0)	HALFWORD	2	CB_LENGTH	Length of cb
(2)	CHARACTER	1	ARROW	> character

Offset Hex	Type	Len	Name (Dim)	Description
(3)	CHARACTER	3	DFH	DFH characters
(6)	CHARACTER	2	DOMID	DS for Dispatcher domain
(8)	CHARACTER	8	BLK_NAME	set to ctblblock name
(10)	CHARACTER	8	FIRST_STIMER	1st stimer due to expire
(18)	CHARACTER	1	STIMER_FLAGS	Various flags
	1... ..		STIMER_RUN	Stimer exit has run since last partition exit.
	.111 1111		*	reserved

(28)	UNSIGNED	4	SUSPEND_CS_WORD	
(28)	UNSIGNED	1	STATE	
(29)	CHARACTER	3	*	
The data at the start of the DTA is referenced in the dispatcher scans, and may be referenced not just when dispatching the DTA for this task, but also when considering dispatching other tasks.				

Offset Hex	Type	Len	Name (Dim)	Description
<p>Chaining fields for task                      There are many chains within the dispatcher, but only 2 chaining fields are required.                      The following shows which Chains are Mutually Exclusive.                      Unused or Executable                      If a task is on the Executable chain, it can also be on ONE of the following chains.                      Dispatchable(s) (one per TCB)                      Hand_postable                      Executable chain = This is the list of all DS tasks.                      This chain is used by functions such as Timeout, that are interested in scanning sets of tasks rather than just selecting a task from the front of a list.                      Note that a task can be on other chains as well as this one.</p> <p>GENERAL_CHAIN = This is a chain field used for the following chains.</p> <ol style="list-style-type: none"> <li>Free - Alias the 'Unused', or the 'Not in use' chain. All spellings are talking about the same thing                              The next chain is dealing with tasks that are 'ready'. ie they are not suspended or waiting.</li> <li>Dispatchable. - The List(s) of tasks that are waiting to be dispatched.</li> <li>Hand_postable. - Tasks are put here when they issue a WAIT_OLDW or a WAIT_OLDC.                              The chain is scan to see if any ecbs for these tasks have been 'Hand Posted' by some program setting the post bit on in the ECB.</li> </ol> <p>All these fields are just straight forward ptrs to the next task in the chain.</p>

## DTCPs Data tables local access anchor blocks

DTCHD\_BLOCK, the Data Tables Connect Header Block, is allocated once per region which has performed client initialization processing to allow connections to other regions. It is addressed via the region anchor. It contains information used by the supervisor routines which establish and validate connections to files associated with data tables in server regions.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	544	DTCHD_BLOCK	DT Connect Header block
(0)	CHARACTER	16	DTCHD_PREFIX	Standard CICS prefix
(0)	HALFWORD	2	DTCHD_LEN	Length of connect anchor
(2)	CHARACTER	1	DTCHD_ARROW	Eye catcher '>'
(3)	CHARACTER	5	DTCHD_DFHDT	Eye catcher 'DFHDT'
(8)	CHARACTER	8	DTCHD_ID	Eye catcher 'CONNECT'
(10)	CHARACTER	8	DTCHD_VECTOR_DESC	Connect vector descriptor
(10)	ADDRESS	4	DTCHD_VECTOR_PTR	Address of connect vector
(14)	FULLWORD	4	DTCHD_VECTOR_SIZE	Total connect vector entries
(18)	FULLWORD	4	DTCHD_VECTOR_HI_ACTIVE_INDEX	Highest index for which current DTCON_COUNT is non-zero - never less than true value but might be more
(1C)	ADDRESS	4	DTCHD_CALLER_RB	Address of RB which issued initialization call, checked against RB issuing CONNECT, DISCONNECT or record retrieval requests
(20)	BITSTRING	512	DTCHD_LX_MAP	Bit map indexed by LX 0-4095 indicating whether ETCO has been performed for a server region using that LX value

DTCON\_VECTOR, the Data Tables Connect Vector, is effectively a variable length extension of the Connect Header Block, but it is stored separately to allow it to be reallocated at a larger size if necessary. It contains information used to establish and validate cross-memory connections to data tables.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	32	DTCN_VECTOR (*)	Data Tables Connect Vector
(0)	FULLWORD	4	DTCN_COUNT	Number of valid connections to the remote file instance identified by this entry
(4)	UNSIGNED	2	DTCN_ASID	Target address space id - for diagnostic purposes only
(6)	CHARACTER	10	DTCN_INFO	Coded connection information which is used for retrieval
(6)	UNSIGNED	2	DTCN_LX	PC linkage index
(8)	UNSIGNED	4	DTCN_FILE_REUSE	Server file reuse counter
(C)	ADDRESS	4	DTCN_FILE_TOKEN	Server file block address
(10)	CHARACTER	8	DTCN_APPLID	Server region CICS APPLID - for diagnostic purposes only
(18)	CHARACTER	8	DTCN_FILE_NAME	File name in server region - for diagnostic purposes only

## DTLPS Data tables connection anchor blocks

DTHDR\_BLOCK, the Data Tables Header Block, is a unique CICS lifetime block which is getmained by CICS data tables initialization and referenced by CICS data tables loading and record access services. It contains heads of chains and other information which occurs once per CICS region, plus a storage area which is used by the record retrieval module DFHDTR for its working storage.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	*	DTHDR_BLOCK	Header Block
(0)	CHARACTER	16	DTHDR_PREFIX	Standard CICS prefix
(0)	HALFWORD	2	DTHDR_LEN	Length of header block
(2)	CHARACTER	1	DTHDR_ARROW	Eye catcher '>'
(3)	CHARACTER	5	DTHDR_DFHDT	Eye catcher 'DFHDT'
(8)	CHARACTER	8	DTHDR_ID	Eye catcher 'HEADER'
(10)	ADDRESS	4	DTHDR_DTFOR_EP	DFHDTFOR module entry point for diagnostic purposes
(14)	ADDRESS	4	DTHDR_RECMAN_EP	Record manager entry point (DFHDTRM, loaded to address)
(18)	CHARACTER	16	DTHDR_TABLE_INFO	Table block information
(18)	ADDRESS	4	DTHDR_TABLE_HEAD	Head of active table chain
(1C)	ADDRESS	4	DTHDR_TABLE_POOL	Table block cell pool id
(20)	ADDRESS	4	DTHDR_TABLE_FREE	Head of free chain
(24)	FULLWORD	4	DTHDR_TABLE_COUNT	Number of blocks in use
(28)	CHARACTER	20	DTHDR_FILE_INFO	File block information
(28)	ADDRESS	4	DTHDR_FILE_HEAD	Head of active file chain
(2C)	ADDRESS	4	DTHDR_FILE_POOL	File block cell pool id
(30)	ADDRESS	4	DTHDR_FILE_FREE	Head of free chain
(34)	FULLWORD	4	DTHDR_FILE_COUNT	Number of blocks in use
(38)	FULLWORD	4	DTHDR_MAX_ATTRS_LEN	File attribute suffix size
(3C)	FULLWORD	4	DTHDR_LOAD_ID	Unique identifier which is allocated to each table load task, always contains the most recently allocated id
(40)	ADDRESS	4	DTHDR_BACKOUT_POOL	Backout cell pool id
(44)	UNSIGNED	4	DTHDR_PRIMARY_ALET	ALET used to access table index and entry data areas in the server address space, changed when any table is closed to interrupt active requests so that retry can revalidate the connections
(48)	ADDRESS	4	DTHDR_DATA_SPACE_PTR	Address of data space block
(4C)	ADDRESS	4	*	Reserved, alignment to dword
(50)	CHARACTER	*	DTHDR_RE_WORK	DFHDTR working storage

At Data Tables FOR initialization, DFHDTR gets and initializes DTDUM\_BLOCK. This block represents a dummy table and must always overlay the first part of DTTBL\_BLOCK so that the pointer to the header block is at the same offset in both control blocks. Its address is passed in DTP\_TABLE\_TOKEN whenever DFHDTR is called for a commit/backout request, and it allows commit and backout to find the header block.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	36	DTDUM_BLOCK	Dummy recovery blk
(0)	CHARACTER	24	DTDUM_PREFIX	Standard CICS prefix
(0)	HALFWORD	2	DTDUM_LEN	Length of table block
(2)	CHARACTER	1	DTDUM_ARROW	Eye catcher '>'
(3)	CHARACTER	5	DTDUM_DFHDT	Eye catcher 'DFHDT'
(8)	CHARACTER	8	DTDUM_ID	Eye catcher 'DUMMY'
(10)	CHARACTER	8	DTDUM_NAME	Unused, matches table block
(18)	CHARACTER	8	DTDUM_CHAIN	Unused, matches table block

Offset Hex	Type	Len	Name (Dim)	Description
(1C)	UNSIGNED	4	DTDUM_CHANGES	Unused, matches table block
(20)	ADDRESS	4	DTDUM_HEADER_PTR	Pointer back to header block

DTTBL\_BLOCK, the DT Table Block, is the control block which describes a table and its associated index and record storage. The first few fields should never be moved without also changing DTDUM\_BLOCK, because the pointer to the header block must remain at the same offset in both.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	232	DTTBL_BLOCK	Data Tables Table Block
(0)	CHARACTER	24	DTTBL_PREFIX	Standard CICS prefix
(0)	HALFWORD	2	DTTBL_LEN	Length of table block
(2)	CHARACTER	1	DTTBL_ARROW	Eye catcher '>'
(3)	CHARACTER	5	DTTBL_DFHDT	Eye catcher 'DFHDT'
(8)	CHARACTER	8	DTTBL_ID	Eye catcher 'TABLE'
(10)	CHARACTER	8	DTTBL_NAME	Name of file which initiated the creation of the table
(18)	CHARACTER	8	DTTBL_CHAIN	Align for block-concurrent fetch so change count can be used to validate chain field
(18)	ADDRESS	4	DTTBL_NEXT	Next in active or free chain or zero at end of chain
(1C)	UNSIGNED	4	DTTBL_CHANGES	Counter updated whenever a change is made to the table state or table contents, and also when the block is freed
(20)	ADDRESS	4	DTTBL_HEADER_PTR	Pointer back to header block
(24)	BITSTRING	1	DTTBL_FLAGS	Table type and state flags
	1... ..		DTTBL_CMT	On if CICS maintained table, Off if user maintained (UMT)
	.1.. ..		DTTBL_RECOVERABLE	Table is a recoverable UMT
	..1. ....		DTTBL_INCOMPLETE	One or more gaps in table (CMT only)
	...1 ....		DTTBL_LOAD_EOF	Set by the END_LOAD service when loader has reached EOF
	.... 1...		DTTBL_LOAD_GAP	The previous record was discarded during loading, so the next accepted record will need a gap before it
	.... .1..		DTTBL_LOAD_DISC	A record with a key above the highest loaded key was discarded since the previous loading request, so a gap is needed if the next loaded record has a higher key
	.... ..1		DTTBL_ADD_GAP	Within add processing, this indicates whether the entry is being added within a gap
	.... ..1		*	Reserved
(25)	BITSTRING	1	DTTBL_T_FLAGS	Table shared access flags
	1... ..		DTTBL_AVAILABLE	Table available for access. Set when table reaches a stage at which it is available for shared access (for a CMT - when the load load has been initiated, for a UMT - at completion of loading). Never turned off again until table is closed.
	.111 1111		*	Reserved
(26)	CHARACTER	2	*	Reserved for alignment
(28)	FULLWORD	4	DTTBL_FILE_COUNT	Number of associated files

(30)	FULLWORD	4	DTTBL_DSNAME_LEN	Length of data set name
(34)	FULLWORD	4	DTTBL_LOAD_ID	Identifying counter of the valid loading task for this table
(38)	CHARACTER	16	DTTBL_STATS	External statistics about internal (loading) requests
(38)	UNSIGNED	4	DTTBL_LOAD_COUNT	Requests to load a record
(3C)	UNSIGNED	4	DTTBL_REJECT_COUNT	Loads rejected by user exit
(40)	UNSIGNED	4	DTTBL_FULL_COUNT	Loads failed due to full tbl
(44)	UNSIGNED	4	DTTBL_ENTRY_HWM	Entry count high water mark
(48)	FULLWORD	4	DTTBL_KEY_LEN	Length of record key
(4C)	FULLWORD	4	DTTBL_KEY_OFFSET	Offset of key within record
(50)	FULLWORD	4	DTTBL_MAX_RECLEN	Maximum record length
(54)	ADDRESS	4	DTTBL_LOAD_HIGH_KEY	Address of copy of highest key accepted during loading, which must be changed only by switching the pointer to a new copy, to allow for concurrent read access
(58)	ADDRESS	4	DTTBL_LOAD_DISC_KEY	Address of copy of lowest discarded key above previous highest loaded key (valid if discarded key flag is set), also used as alternate area for highest loaded key area, swapped over at each change
(5C)	CHARACTER	16	DTTBL_ENTRY_INFO	Entry information, primarily for record manager DFHDTRM
(5C)	ADDRESS	4	DTTBL_ENTRY_ALET_PTR	Table entry ALET pointer
(60)	ADDRESS	4	DTTBL_ENTRY_POOL	Record entry pool token
(64)	FULLWORD	4	DTTBL_ENTRY_COUNT	Number of entries in use
(68)	FULLWORD	4	DTTBL_ENTRY_LIMIT	Limit specified for table
(6C)	CHARACTER	12	DTTBL_ADD_SAVE	Temporary saved position within add processing while locating the previous record
(6C)	UNSIGNED	4	*(3)	Position needs 3 fullwords
(78)	CHARACTER	20	DTTBL_INDEX_INFO	Index information, primarily for index manager DFHDTIX
(78)	ADDRESS	4	DTTBL_INDEX_ROOT	Root node for index tree
(7C)	ADDRESS	4	DTTBL_INDEX_ALET_PTR	Index storage ALET pointer
(80)	ADDRESS	4	DTTBL_INDEX_POOL	Index cell pool token
(84)	FULLWORD	4	DTTBL_INDEX_COUNT	Index cells in use
(88)	FULLWORD	4	DTTBL_INDEX_HWM	High water index cells
(8C)	CHARACTER	44	DTTBL_DATA_INFO	Data storage and data space information, primarily for DFHDTDM and DFHDTDA
(8C)	FULLWORD	4	DTTBL_DATA_SPACE	Index within DTDSP_VECTOR of entry for the data space to which this table is assigned
(90)	ADDRESS	4	DTTBL_DATA_ALET_PTR	Data space ALET pointer
(94)	ADDRESS	4	DTTBL_DATA_HEAD	Head of data frame chain

Offset Hex	Type	Len	Name (Dim)	Description
(98)	FULLWORD	4	DTTBL_DATA_FRAME	Size of each frame
(9C)	ADDRESS	4	DTTBL_DATA_START	Origin of first frame area
(A0)	ADDRESS	4	DTTBL_DATA_NEXT	Next unallocated frame
(A4)	ADDRESS	4	DTTBL_DATA_END	End of current frame area
(A8)	FULLWORD	4	DTTBL_DATA_SIZE	Total data storage in use
(AC)	ADDRESS	4	DTTBL_DATA_FREE	Head of free frame chain
(B0)	FULLWORD	4	DTTBL_DATA_COUNT	Number of data areas in use
(B4)	FULLWORD	4	DTTBL_DATA_HWM	High water data area count
(B8)	FULLWORD	4	DTTBL_RETRY_COUNT	Shared read retry count

The next field should always be addressed indirectly using DTTBL\_DSNAME\_PTR except when it is first set up. This allows new fields to be added in front of it, and means that it can be removed if it becomes unnecessary to store the DSN in the table.

(BC)	CHARACTER	44	DTTBL_DSNAME	Source data set name
------	-----------	----	--------------	----------------------

DTFIL\_BLOCK is a data tables file block. There is one such block for every UMT, and one for each file resource that refers to a source data set where one of the files is defined as a CMT.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	*	DTFIL_BLOCK	Data Tables File Block
(0)	CHARACTER	24	DTFIL_PREFIX	Standard CICS prefix
(0)	HALFWORD	2	DTFIL_LEN	Length including attributes
(2)	CHARACTER	1	DTFIL_ARROW	Eye catcher '>'
(3)	CHARACTER	5	DTFIL_DFHDT	Eye catcher 'DFHDT'
(8)	CHARACTER	8	DTFIL_ID	Eye catcher 'FILE'
(10)	CHARACTER	8	DTFIL_NAME	File resource name
(18)	CHARACTER	8	DTFIL_CHAIN	Align for block-concurrent fetch so reuse count can be used to validate chain field
(18)	ADDRESS	4	DTFIL_NEXT	Next in active or free chain or zero at end of chain
(1C)	UNSIGNED	4	DTFIL_REUSE_COUNT	Allocate and release count - odd when file block is in the active file chain (i.e. DTFIL_NEXT is valid for an active chain scan)
(20)	ADDRESS	4	DTFIL_TABLE_PTR	Pointer to table block
(24)	BITSTRING	1	DTFIL_FLAGS	File-related status flags

-- Shared access to a file uses the DTFIL\_ENABLED and DTFIL\_CONTINUE flags. DTFIL\_ENABLED flag on means file enabled for new requests. This flag is tested on shared access when the request specifies TEST\_ENABLE, but is ignored otherwise. The feature should never set this flag to disabled unless it knows from file control that the file really is disabled. The flag is therefore set ON when the file is opened, and reset to ON or OFF on a SET\_ENABLEMENT call. If the flag is OFF then new requests will fail with a DISABLED exception. DTFIL\_CONTINUE flag on means old requests can continue. When this flag is ON, existing requests to the file can continue. If the flag is OFF then all requests will fail with a DISABLED exception, regardless of whether or not they are continuations of existing requests (which do not test DTFIL\_ENABLED). This flag will always be ON unless a FORCE DISABLE is issued, when it will be set to OFF. A subsequent ENABLE request will turn it back on. The flag is set ON when the file block is opened. -----

	1... ..		DTFIL_ENABLED	Enabled for new requests
	.1. ....		DTFIL_INITIATOR	File initiated the table
	..1. ....		DTFIL_CONTINUE	Old requests can continue
	...1 1111		*	Reserved
(25)	BITSTRING	1	DTFIL_A_FLAGS	File shared access flags
	1... ..		DTFIL_AVAILABLE	Available for shared access. When set, file is visible. Set on once the enablement state of the file is known, never turned off until the file is closed.
	.111 1111		*	Reserved
(26)	CHARACTER	2	*	Reserved for alignment
(28)	FULLWORD	4	DTFIL_ATTRS_LEN	Length of attributes package
(2C)	CHARACTER	*	DTFIL_ATTRS	Saved file attributes

## DTRPS Data tables remote sharing anchor block

DTRHD\_BLOCK, the Data Tables Remote Header Block, is a unique CICS lifetime block which is getmained by CICS data tables remote initialization. It contains information which occurs once per application region which has connections to shared data tables in other regions. In the current implementation, this only consists of a pointer used for diagnostic purposes.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	24	DTRHD_BLOCK	Remote Header Block
(0)	CHARACTER	16	DTRHD_PREFIX	Standard CICS prefix
(0)	HALFWORD	2	DTRHD_LEN	Length of remote header
(2)	CHARACTER	1	DTRHD_ARROW	Eye catcher '>'
(3)	CHARACTER	5	DTRHD_DFHDT	Eye catcher 'DFHDT'
(8)	CHARACTER	8	DTRHD_ID	Eye catcher 'REMHEAD'
(10)	ADDRESS	4	*	Reserved for future use
(14)	ADDRESS	4	DTRHD_DTAOR_EP	DFHDTAOR module entry point for diagnostic purposes

## DTSPS Data tables SVC routine anchor blocks

DTSYS\_ANCHOR, the Data Tables System Anchor, is allocated once within an MVS image. It primarily provides an anchor point to enable code running in one address space to find out about data table servers running in other address spaces.

Each region using data tables initially accesses the system anchor via the internal CICS QSSCT chain starting at SSCTSUS2 in the "CICS" SSCVT, then saves the address in the region anchor for subsequent use. The address also appears in the server element for use by the EOM RESMGR routine.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	32	DTSYS_ANCHOR	Data Tables System Anchor
(0)	CHARACTER	16	DTSYS_PREFIX	Standard CICS prefix
(0)	HALFWORD	2	DTSYS_LEN	Length of system anchor
(2)	CHARACTER	1	DTSYS_ARROW	Eye catcher '>'
(3)	CHARACTER	5	DTSYS_DFHDT	Eye catcher 'DFHDT'
(8)	CHARACTER	8	DTSYS_ID	Eye catcher 'SYSTEM'
(10)	CHARACTER	8	DTSYS_ACTIVE_CLOCK	STCK value updated when files become available for shared access
(18)	ADDRESS	4	DTSYS_SERVER_HEAD	Head of active server chain
(1C)	UNSIGNED	4	DTSYS_CONNECTS_IN_FLIGHT	Number of in-flight CONNECT requests in this MVS image that cannot tolerate termination of their server

DTRGN\_ANCHOR, the Data Tables Region Anchor, is allocated once per region which is using shared data tables support, and is located via AFDTRGNP for the appropriate CICS QR TCB. It provides a common anchor for the data areas used by supervisor code for data tables server and connection processing. Note that the offset of DTRGN\_LOOKUP\_EP is relied on by code outside the SVC routine, and must remain fixed for any new version.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	76	DTRGN_ANCHOR	Data Tables Region Anchor
(0)	CHARACTER	16	DTRGN_PREFIX	Standard CICS prefix
(0)	HALFWORD	2	DTRGN_LEN	Length of region anchor
(2)	CHARACTER	1	DTRGN_ARROW	Eye catcher '>'
(3)	CHARACTER	5	DTRGN_DFHDT	Eye catcher 'DFHDT'
(8)	CHARACTER	8	DTRGN_ID	Eye catcher 'REGION'
(10)	ADDRESS	4	DTRGN_SYSTEM_PTR	Address of system anchor
(14)	CHARACTER	12	DTRGN_CONNECT_INFO	Connected region information
(14)	ADDRESS	4	DTRGN_REMOTE_PTR	Remote header block address set from global token passed on remote initialization
(18)	ADDRESS	4	DTRGN_LOOKUP_EP	Connect vector look-up entry point (DFHDTCV in ECSA) - CAUTION - THIS OFFSET MUST NOT CHANGE - see preceding block comment.

Offset Hex	Type	Len	Name (Dim)	Description
(1C)	ADDRESS	4	DTRGN_CONNECT_PTR	Connect block address, set up at remote initialization
(20)	CHARACTER	44	DTRGN_SERVER_INFO	Server region information
(20)	ADDRESS	4	DTRGN_HEADER_PTR	Local header block address, set from global token passed on local initialization
(24)	ADDRESS	4	DTRGN_RECMAN_EP	Record manager entry point, loaded during server initialization
(28)	ADDRESS	4	DTRGN_SERVER_PTR	Server element address, set during server logon
(2C)	UNSIGNED	4	DTRGN_EOM_TOKEN	EOM RESMGR token
(30)	CHARACTER	8	DTRGN_HOME_STOKEN	Home address space STOKEN
(38)	ADDRESS	4	DTRGN_ALET_LIST_PTR	Start of first section of list of PASN ALETs added by DTSVC, for DELETE validation
(3C)	ADDRESS	4	DTRGN_EXIT_WORKA_PTR	Address of work area for SYNCH exit to issue trial ALESERV for STOKEN checks
(40)	BITSTRING	1	DTRGN_FLAGS	Flag byte
	1... ..		DTRGN_TRANSWAP	SYSEVENT TRANSWAP was done
	.1.. ..		DTRGN_EOM_RESMGR_DELETE_ACTIVE	EOM RESMGR DELETE might be in progress
	..11 1111		*	Reserved
(41)	CHARACTER	3	*	Reserved for alignment
(44)	FULLWORD	4	DTRGN_DTAM_LENGTH	Length of DFHDTAM, set if CICS has loaded DTAM, zero if it is in the LPA
(48)	ADDRESS	4	DTRGN_DTAM_ORIGIN	Origin of DFHDTAM in storage, set if CICS has loaded DTAM, zero if it is in the LPA

DTSRV\_ELEMENT, a Data Tables Server element, is created in ECSA when a server region logs on. Its address is stored in the region anchor, and when it is active it can be located from other address spaces via a chain from the the system anchor. It contains the information needed to connect to an active server from another address space.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	56	DTSRV_ELEMENT	Data Tables Server Element
(0)	CHARACTER	24	DTSRV_PREFIX	Standard CICS prefix
(0)	HALFWORD	2	DTSRV_LEN	Length of block
(2)	CHARACTER	1	DTSRV_ARROW	Eye catcher '>'
(3)	CHARACTER	5	DTSRV_DFHD	Eye catcher 'DFHD'
(8)	CHARACTER	8	DTSRV_ID	Eye catcher 'SERVER'
(10)	CHARACTER	8	DTSRV_APPLID	Server generic CICS APPLID
(18)	ADDRESS	4	DTSRV_NEXT	Chain to next, zero if last
(1C)	ADDRESS	4	DTSRV_SYSTEM_PTR	Address of system anchor - Zero if this server element is neither in the active chain nor being used by any in-flight CONNECT requests
(20)	UNSIGNED	2	DTSRV_ASID	Server address space id
(22)	UNSIGNED	2	DTSRV_LX	Server PC linkage index - 1st bit is 1 if this server does not currently own an LX
(24)	UNSIGNED	4	DTSRV_ET_TOKEN	Server PC entry table token
(28)	ADDRESS	4	DTSRV_SEC_EP	Connect security entry point
(2C)	ADDRESS	4	DTSRV_SEC_TOKEN	Connect security block token - Zero if this server is not enforcing file security
(30)	FULLWORD	4	DTSRV_DTAM_LENGTH	Length of DFHDTAM, set if CICS has loaded DTAM, zero if it is in the LPA
(34)	ADDRESS	4	DTSRV_DTAM_ORIGIN	Origin of DFHDTAM in storage, set if CICS has loaded DTAM, zero if it is in the LPA

## DTXPS Data tables security anchor block

DTSEC\_BLOCK, the Data Tables Security Block, is allocated in ECSA by connect security initialization, called during server logon processing. It contains information from the server address space which will be needed for security checks at connect time, when the server private region is not accessible. It is pointed to by the security token in the server element.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	52	DTSEC_BLOCK	Data Tables Security Block
(0)	CHARACTER	16	DTSEC_PREFIX	Standard CICS prefix
(0)	HALFWORD	2	DTSEC_LEN	Length of security block

## D2CSB Csub block

CONTROL BLOCK NAME = DFHD2CSB  
 DESCRIPTIVE NAME = CICS DB2 Subtask block  
 FUNCTION =  
 The DFHD2CSB block contains state data for the CICS-DB2 subtask. It is also used as working storage by the subtask.  
 LIFETIME =  
 A DFHD2CSB is getmained when a Subtask TCB is attached. It is freemained when a subtask is detached.  
 LOCATION =  
 DFHD2CSB blocks are chained together off the DFHD2GLB and off either a DB2ENTRY or the pool or command thread section of the DFHD2GLB. There are a number of chains. Which chain a DFHD2CSB is on is governed by the state of the Thread. There are chains for free Tcbs, free protected threads, and active threads.  
 NOTES :  
 DEPENDENCIES = S/370  
 RESTRICTIONS = none  
 MODULE TYPE = Control block definition

## D2ENT Db2entry block

CONTROL BLOCK NAME = DFHD2ENT  
 DESCRIPTIVE NAME = CICS DB2 attach DB2ENTRY control block  
 FUNCTION =  
 The DFHD2ENT block represents a DB2ENTRY RDO object and holds state data and attributes to be used a transation or set of transactions when accessing DB2.  
 LIFETIME =  
 A DFHD2ENT is getmained when a DB2ENTRY entity is installed. It is freemained when a DB2ENTRY is discarded.  
 LOCATION =  
 DFHD2ENT resides above the 16MB line. It is located using Directory manager domain using its name as the key.  
 NOTES :

## D2GLB Cics/db2 global block

CONTROL BLOCK NAME = DFHD2GLB  
 DESCRIPTIVE NAME = CICS DB2 attach Global block  
 FUNCTION =  
 The DFHD2GLB block represents the DB2CONN RDO object and contains global state information for the CICS-DB2 connection. It also contains the state information for Pool threads and command threads. These are mapped by the generic DB2ENTRY structure DFHD2RCT but are included in the DFHD2GLB as there can only be one pool definition and command thread definition and hence are global in nature. A DB2CONN and hence a DFHD2GLB is the minimum required to operate the CICS-DB2 Attachment facility.

LIFETIME =  
 A DFHD2GLB is getmained when a DB2CONN entity is installed. It is freemained when a DB2CONN is discarded.

LOCATION =  
 DFHD2GLB is anchored off CICS/DB2 static storage (DFHD2SS). It resides above the 16MB line.

NOTES :  
 DEPENDENCIES = S/370  
 RESTRICTIONS = none  
 MODULE TYPE = Control block definition  
 DFHD2GLB block

## D2LOT Cics/db2 life of task block

CONTROL BLOCK NAME = DFHD2LOT  
 DESCRIPTIVE NAME = CICS DB2 attach Life of Task block  
 FUNCTION =  
 The DFHD2LOT block holds task lifetime information about the task currently accessing DB2. It is the CICS-DB2 equivalent of the TCA.  
 LIFETIME =  
 The DFHD2LOT is a mapping of the task Local work area of the CICS-DB2 TRUE DFHD2EX1. It is getmained by CICS the time a CICS task calls the CICS-DB2 TRUE. It is freemained by CICS at task termination time.  
 LOCATION =  
 DFHD2LOT resides above the 16MB line. It is located using UEPTAA in the TRUE's DFHUEPAR parameter list  
 NOTES :

## D2SS Cics/db2 static storage

CONTROL BLOCK NAME = DFHD2SS  
 DESCRIPTIVE NAME = CICS DB2 attach Static Storage  
 FUNCTION =  
 The DFHD2SS block contains global data for the CICS-DB2 connection established during CICS startup before the DFHD2GLB is created. It is also used to store data that needs to survive even if the DB2CONN is discarded and hence the DFHD2GLB freemained.  
 LIFETIME =  
 DFHD2SS is getmained by DFHSIB1C during CICS initialisation. Its lifetime is the lifteime of CICS, it is not freemained.  
 LOCATION =  
 DFHD2SS resides above the 16MB line. It is anchored off the static storage address list DFHSSAPS which is turn is anchored off the CSA optional features list.  
 NOTES :  
 DEPENDENCIES = S/370

## FBWAC File browse work area for data tables

CONTROL BLOCK NAME = DFHFBWAC  
DESCRIPTIVE NAME = CICS (FC) File Browse Work Area  
FUNCTION =  
Browse work area for browsing data tables.  
This control block is part of data tables support within CICS file control. It is used to keep track of the status of a browse to a data table. It is used for both shared data tables support and coupling facility data table support, although not all fields are used by both.  
An instance of the FBWA represents a browse thread by a unit of work to a data table, so there will be one FBWA per data table being browsed per UOW that is browsing.

LIFETIME =  
An FBWA is created when a START\_BROWSE is issued to a data table, and destroyed when the browse is ended.

STORAGE CLASS =  
FBWAs are getmained from one of the FC buffer pools in the FC\_ABOVE subpool, which is above the line, CICS key stg. It is freed back to the buffer pool when the browse ends.

LOCATION =  
The FBWA for a request is addressed by FRT\_FBWA\_ADDRESS in the FRTE.

INNER CONTROL BLOCKS =  
None.

NOTES :  
DEPENDENCIES = S/390  
RESTRICTIONS = None  
MODULE TYPE = Control block definition

EXTERNAL REFERENCES =  
No referenced items are defined outside this control block

DATA AREAS =  
No fields in operating system data areas are referenced

CONTROL BLOCKS =  
FBWA\_FREE\_CHAIN addresses the home buffer chain

GLOBAL VARIABLES (Macro pass) =  
No global macro variables are referenced

File Browse Work Area  
This area is used to record status information about a browse sequence. It is addressed via a pointer in the FRTE associated with the browse and created using an IO buffer of appropriate size obtained from a file control IO buffer pool.  
Some of the data relate to the state of the browse as perceived at the API, e.g. whether the browse is GENERIC and what key was last returned to the application.

CMT-specific fields  
Because browsing a CICS-maintained shared data table may require references to the source data set it may be necessary institute a source browse. Some data in the FBWA relate to the state of any such browse and its relationship to the API browse.

The following is an explanation of some of the less immediately obvious items which refer to the source data set browse.

**FBWA\_SOURCE\_CURRENT**

is meaningful only if FBWA\_SOURCE\_STARTED is on. It shows that the last browse request was satisfied by reference to the source so the next one could validly be processed by simply passing the request on to the source browse service.

**FBWA\_SOURCE\_IN\_SEQ**

is meaningful only if FBWA\_SOURCE\_STARTED is on. It shows that the browse is full key GTEQ and that the source browse is known to be positioned at a key less than or equal to that of the current API browse position.

It is used to determine whether a RESETBR can be safely omitted in some cases where recourse to the source browse is necessary to satisfy a request.

It is used solely for optimization and is set only in circumstances in which it is easy to be sure of its truth.

SOURCE\_IN\_SEQ is used to hold the value of the flag at the start of a request and the flag itself is set off. It is

set on again at the end of the request if appropriate.

**FBWA\_TOKEN\_VALID**

shows that the last browse request was satisfied from the table and that the token in the FRTE, FRT\_DT\_RECORD\_TOKEN, corresponds to the current browse key FBWA\_CURRENT\_KEY.

The token is used to optimize table access for sequential browse requests by avoiding the index search.

This field is also used for UMTs.

**FBWA\_NEXT\_KEY\_VALID**

shows that the key in FBWA\_NEXT\_KEY is valid. If a gap is encountered while browsing a table SDTF returns the next key in the table. This is copied into FBWA\_NEXT\_KEY and FBWA\_NEXT\_KEY\_VALID is set on. As long as the browse remains sequential, no attempt will be made to revert to table retrieval until this key value is reached.

**FBWA\_SEQUENTIAL**

shows that the next browse request may be treated as sequential provided that it satisfies the criteria. The indicator is set only after a request has completed with an OK or ENDFILE response so that continuation in any other case, e.g. after NOTFND, will be treated as a reposition.

This field is also used for UMTs and CFDTs.

**UMT-specific fields**

There are no fields used exclusively for UMTs.

**CFDT-specific fields**

There are no fields used exclusively for CFDTs.

## FCPEC File control cfdt pool element

CONTROL BLOCK NAME = DFHFCPEC  
 DESCRIPTIVE NAME = CICS FC Pool Element (FCPE)  
 FUNCTION =  
 DFHFCPE describes the DSECT for a File Control Pool Element. A pool element represents one connection to a Coupling Facility Data Table Pool. Coupling Facility Data Tables are organised into pools, each of which is similar in scope and function to a CICS FOR.

For each table pool which can be accessed by a given MVS image, there is a table server region running in that image which manages access to the pool.

A pool element is created and chained to FC static when a file definition that refers to the pool is installed and there is not already a pool element for that CFDR pool. A connection to the CFDT server is made when CICS opens the first table for the pool, and a flag in the FCPE is set to indicate that the pool is now connected. If the CFDT server goes down the FCPE will be marked connect\_failed when CICS realises the server has gone. This flag is only reset when the server returns and a new connection is successfully made. Note : it is important that the testing of the connect\_failed flag is always serialised with any connect that may already be in progress, by waiting on the connect complete ECB. The address of the head of the FCPE chain in FC Static is field FC\_FCPE\_CHAIN.

FCPEs are getmained from the FCPE subpool which is created by DFHFCRP during File Control Initialisation. File Control Pool Elements are freemained by DFHFCSD at CICS shutdown when pool disconnections are issued.

LIFETIME =  
 Created during installation of a file definition that refers to the associated pool.  
 Deleted at shutdown (when disconnects are also issued for all pools to which CICS is currently connected).

STORAGE CLASS =  
 Above 16M line. CICS key.

LOCATION =  
 INNER CONTROL BLOCKS = None.

NOTES :

---

**FCPWC      File control cfdt pool wait element**

CONTROL BLOCK NAME = DFHFCPW  
 DESCRIPTIVE NAME = CICS FC CFDT Pool Wait Element  
 FUNCTION =  
 DFHFCPW describes the DSECT for a File Control CFDT Pool Wait Element. A pool wait element represents a task which has tried to issue a request to a coupling facility data table that resides in a particular server pool, but which has to wait because the number of requests allowed in the server at any one time has been reached. Depending on the kind of request, the FCPW will represent either a 'Locking request slot' waiter or a 'MaxReqs' waiter. A Locking request slot waiter is a Locking request (one which will acquire locks) that has to wait because all the slots allocated to Locking requests are currently in use. A MaxReqs waiter is a non-locking request which has to wait because the maximum number of requests (of any kind) allowed in the server has been exceeded. Thus the Locking request slots are a subset of the MaxReqs slots. Different kinds of waiter are chained on separate queues. When a request has to wait, it needs to be appended to a chain anchored from the pool element, and unchained when the request can be resumed. The different kinds of waiter are chained on separate wait queues. FCPWs are getmained from the FCPW subpool which is created by DFHFCRP during File Control Initialisation. A file control CFDT Pool Wait Element is freemained when the waiter that it represents has been successfully resumed.

The FCPW contains the following fields:

- Pointer to next FCPW in chain
- Pointer to previous FCPW in chain
- Suspend token
- Task token for the waiting task
- Suspend start time (for monitoring)
- Transaction number (for debug - so it appears in a dump)
- The priority at which the task should be resumed (it will be set to a higher priority when it is dequeued, to give it more chance of restarting)
- Some flags, indicating: type of waiter

LIFETIME =  
 The lifetime of an FCPW is the time during which the waiter task has to wait. It is created by the module issuing the request when it is discovered that the request will have to wait, and destroyed by that module when the request is resumed.

STORAGE CLASS =  
 Above 16M line. CICS key.

LOCATION =  
 The addresses for the heads of the different FCPW wait chains are in the pool element for the server pool being accessed, in fields FCPE\_LRS\_WAIT\_CHAIN (for the Locking request slot waiters) and FCPE\_WAIT\_CHAIN (for the MaxReqs waiters).

File Control Quiesce Receive Element

Declare the FC Quiesce Receive Element (FCQRE) and associated structures and constants.

-

Element

Each quiesce request received from VSAM RLS via the quiesce exit results in DFHFCQX, the quiesce exit module, creating an FCQRE which is passed to DFHFCQR, the quiesce receive system task module. FCQREs reside in MVS getmaind storage because DFHFCQX has no access to CICS services. They are chained in a one-way linked list anchored in FC static field FC\_FCQRE\_FIRST.

Because DFHFCQX runs under a different MVS TCB to DFHFCQR, standard compare-and-swap chain manipulation logic is used when processing the chain. DFHFCQX adds a new FCQRE to the front of the chain. DFHFCQR isolates the chain then reverses the order of the FCQREs so that processing occurs oldest first. The isolated chain is anchored in FC static field FC\_FCQRE\_ISOLATE.

There is also a permanent Error FCQRE used for communicating errors between DFHFCQX and DFHFCQR. This is addressed from FC static field FC\_FCQRE\_ERROR, and is added to the chain when an error occurs.

All FCQREs appear in a CICS system dump, including the Error FCQRE if it is in use at the time.

## FCQSE File control quiesce send element

-

File Control Quiesce Send Element

Declare the FC Quiesce Send Element (FCQSE) and associated structures and constants.

-

Element

Each quiesce request initiated by CICS results in DFHFCQI, the quiesce initiate module, creating an FCQSE which is passed to DFHFCQS, the quiesce send module. FCQSEs reside in subpool FC\_ABOVE, the token for which is in FC static. They are chained in a two-way linked list anchored in FC static fields FC\_FCQSE\_FIRST and FC\_FCQSE\_LAST.

FCQSEs are added to the end of the chain by DFHFCQI. The chain is scanned from the front by DFHFCQS, so the oldest FCQSE is processed first.

All FCQSEs appear in a CICS system dump.

## FCUPC File control cfdt uow pool block

CONTROL BLOCK NAME = DFHFCUPC  
 DESCRIPTIVE NAME = CICS (FC) CFDT UOW Pool Block  
 FUNCTION =  
 The FCUP block represents recoverable updates made within a unit of work to tables within a coupling facility data table pool.  
 THE FCUP block is used by the CF data tables part of the File Control component. Each FCUP block represents the RMC link to a CF data table pool within a unit of work. This means that within a unit of work, each CF data table pool which contains one or more CF data tables to which the UOW has made recoverable updates will be represented by an FCUP block: there is one FCUP block per UOW per recoverably-updated CFDT pool.  
 FCUP blocks are getmained from the FCUP subpool which is created by DFHFICRP during File Control Initialisation.

LIFETIME =  
 The lifetime of an FCUP block is the same as that of the RMC Link which it represents.  
 An FCUP block is created by the CF data tables request processor, DFHFICDR, when the first recoverable update is made within a unit of work to a table which resides in the CF data table pool to which the FCUP block will refer.  
 The FCUP block is created at the same time as an RMC link is created, and it represents File Control's interest in that link.  
 The FCUP block is freed at syncpoint time by the CFDT Syncpoint processor, DFHFICDW, at the successful completion of syncpoint for that pool within the unit of work.

STORAGE CLASS =  
 Above 16M line. CICS key.

LOCATION =  
 The FCUP blocks for a unit of work are chained from the FRAB, addressed by FRAB\_FCUP\_CHAIN\_ADDRESS.

INNER CONTROL BLOCKS =  
 None

NOTES :  
 DEPENDENCIES = S/390  
 RESTRICTIONS = None  
 MODULE TYPE = Control block definition

EXTERNAL REFERENCES =  
 None

DATA AREAS =  
 None

CONTROL BLOCKS =  
 THE FCUP block contains pointer to the pool element for the CFDT pool it represents, and a back-pointer to the FRAB from which it is chained.

GLOBAL VARIABLES (Macro pass) =  
 None

## FEP03 VTAM acb work area

CONTROL BLOCK NAME = DFHSZDAC  
 DESCRIPTIVE NAME = CICS (FEPI) VTAM ACB Work Area  
 FUNCTION = Define 24-bit memory requirements for FEPI  
 VTAM control blocks.  
 1 control block will exist for each active  
 VTAM ACB managed by FEPI. The area is released  
 whenever the ACB is deactivated.  
 LIFETIME = Created by DFHSZRIO during INSTALL processing.  
 Deleted by DFHSZRCA during node deactivation.  
 STORAGE CLASS = 24-bit addressable.  
 LOCATION = Located from the DFHSZDND which describes the  
 node to which the VTAM ACB relates. The DFHSZDND  
 is chained from the DFHSZDCM.  
 INNER CONTROL BLOCKS =  
 NOTES :  
 DEPENDENCIES = S/370

## FEP04 Bind request save area

CONTROL BLOCK NAME = DFHSZDBI  
 DESCRIPTIVE NAME = CICS (FEPI) BIND Request Save Area  
 FUNCTION =  
     Defines the BIND Request Save Area.  
     This data area is a part of the FEPI Resource Manager.  
     It defines the format of the Bind Request Save Area which  
     is used when a BIND is received by the SCIP exit and a  
     Connection Block is not yet available.  
 Lifetime = Until OPNSEC can be completed  
 Storage class = 31-bit addressable  
 Location = Chained from a Node block  
 Inner control blocks = Not applicable

## FEP05 Connection descriptor

CONTROL BLOCK NAME = DFHSZDCD  
 DESCRIPTIVE NAME = CICS (FEPI) Connection Descriptor  
 FUNCTION = Represents a connection to the resource manager.  
 Contains all of the information and references needed by the resource manager to manage a network connection between the front-end node and the back-end target system.  
 LIFETIME = Created by DFHSZRIC during INSTALL processing.  
 Deleted by DFHSZRDC during DISCARD processing.  
 STORAGE CLASS = 31-bit addressable.  
 LOCATION = Located from the DFHSZDPD which describes the pool to which the connection belongs. The DFHSZDPD is chained from the DFHSZDCM.

**NOTE**

End of portion that must match DFHSZDQE. The following 2 fields are identically placed in node, targets and conn's.

(30)	HALFWORD	2	SZD_CD_TRINTVL	Timer retry interval
(32)	HALFWORD	2	SZD_CD_TRTYPE	Retry type required
(34)	FULLWORD	4	*	Unused available

These portion is used for queuing the connection to a target for REQSESS processing.

(38)	CHARACTER	12	SZD_CD_RE_WE	RE WE
(38)	BITSTRING	8	SZD_CD_RE_QCB	RE QCB
(38)	ADDRESS	4	SZD_CD_RE_QC	Next entry
(3C)	ADDRESS	4	*	Unused
(40)	FULLWORD	4	SZD_CD_RE_REQ	Request type

**Connection control flags**

This word (SZD\_CD\_FLAGS\_ALLOC) is tested for zero. A value of zero indicates that the connection is OK to be allocated. Therefore, all flags in this word must be such that one makes the connection unavailable for use.

Offset Hex	Type	Len	Name (Dim)	Description
These flags allow DFHSZRDC to determine what additional cleanup may be required when this connection is removed. Each flag identifies a parent node whose deletion is pending the removal of all of the connections to which it relates. CONN is always set if a connection is being deleted. One or all of the other bits may be set.

## FEP06 Common data area

CONTROL BLOCK NAME = DFHSZDCM  
 DESCRIPTIVE NAME = CICS (FEPI) Common data area  
 FUNCTION = Base FEPI resource manager data area from which all other FEPI data areas may be located. Also contains all globally referenced single instance data areas. There is one DFHSZDCM.  
 LIFETIME = Obtained by DFHSZSIP during resource manager initialisation. Released by DFHSZSIP during resource manager termination.  
 STORAGE CLASS = 31-bit RW  
 LOCATION = Addressed by DFHSZSDS static area structure.  
 INNER CONTROL BLOCKS =  
 NOTES :  
 DEPENDENCIES = S/370  
 RESTRICTIONS =  
 MODULE TYPE = Control block definition  
 EXTERNAL REFERENCES =  
 DATA AREAS =

## FEP07 Conversation data area

CONTROL BLOCK NAME = DFHSZDCV  
 DESCRIPTIVE NAME = CICS (FEPI) Conversation Data Area  
 FUNCTION = Contains the information needed by the resource manager to control an allocated connection (a conversation). One CVCB will exist for each allocated connection.  
 LIFETIME = Created during ALLOCATE processing.  
 Deleted during FREE processing.  
 STORAGE CLASS = 31-bit addressable.  
 LOCATION = Located from the DFHSZDCD which identifies the conversation which currently owns the connection.  
 Also located from DFHSZDCM on two chains:  
 (1) All active conversations.  
 (2) All inactive conversations. ie. those conversations relinquished with FREE(PASS).  
 INNER CONTROL BLOCKS =  
 NOTES :  
 DEPENDENCIES = S/370  
 RESTRICTIONS =  
 MODULE TYPE = Control block definition  
 EXTERNAL REFERENCES =  
 DATA AREAS =  
 CONTROL BLOCKS = DFHSZDEC (Eyecatcher structure definition)  
 GLOBAL VARIABLES (Macro pass) =

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	116	DFHSZDCV	
(0)	CHARACTER	32	SZD_CV_EYE	eye catcher
(0)	HALFWORD	2	SZD_EC_LENGTH	
(2)	CHARACTER	1	SZD_EC_GT	
(3)	CHARACTER	8	SZD_EC_NAME	
(B)	CHARACTER	5	*	
(10)	CHARACTER	8	SZD_EC_SPID	
(18)	UNSIGNED	4	SZD_EC_CBID	
(1C)	CHARACTER	4	*	
These fields chain the conversation off of DFHSZDCM. A conversation exists on one or other of the inactive or active conversation lists.				
(20)	ADDRESS	4	SZD_CV_PREV	previous conversation
(24)	ADDRESS	4	SZD_CV_NEXT	next conversation
Associated connection				
(28)	ADDRESS	4	SZD_CV_CDPTR	connection address
Maximum buffer size allowed on conversation.				
(2C)	FULLWORD	4	SZD_CV_BSIZE	
(2C)	ADDRESS	4	SZD_CV_PDPTR	browse pool

Offset Hex	Type	Len	Name (Dim)	Description
(2C)	ADDRESS	4	SZD_CV_PSPTR	browse property
Conversation ID. Constructed during ALLOCATE processing. It uniquely identifies a particular conversation.				
(30)	BITSTRING	8	SZD_CV_ID	
(30)	ADDRESS	4	SZD_CV_NDPTR	browse node
(30)	ADDRESS	4	SZD_CV_IDX	
(34)	ADDRESS	4	SZD_CV_TDPTR	browse target
(34)	ADDRESS	4	SZD_CV_IDY	
The following three fields combine to uniquely identify the present owner of the conversation. When a conversation is inactive then these are zero.				
(38)	CHARACTER	12	SZD_CV_TID	collective terminal ID
(38)	CHARACTER	4	SZD_CV_TRANID	
(3C)	CHARACTER	4	SZD_CV_TERMID	
(40)	CHARACTER	4	SZD_CV_TASK_NUM	
This field is the root for a list of API requests scheduled for this conversation.				
(44)	ADDRESS	4	SZD_CV_APIQ	
(44)	HALFWORD	2	SZD_CV_RTYPE	BROWSE request type
(46)	HALFWORD	2	*	padding
Conversation control flags				
(48)	BITSTRING	4	SZD_CV_FLAGS	
	1... ....		SZD_CV_BROWSE	This is a BROWSE conversation
This corresponds to the unit-of-work identifier. It is presently unused.				
(4C)	CHARACTER	27	SZD_CV_FQCC	
(67)	CHARACTER	1	*	
(68)	FULLWORD	4	SZD_CV_BTFSIZE	
(6C)	FULLWORD	4	SZD_CV_ECOUNT	
(70)	ADDRESS	4	SZD_CV_BTTPTR

## FEP08 Device support extension

CONTROL BLOCK NAME = DFHSZDDS  
 DESCRIPTIVE NAME = CICS (FEPI) Device Support Extension  
 FUNCTION = Contains device specific information associated with a particular connection. 1 DFHSZDDS exists for each defined DFHSZDCD within a pool designated as being in formatted mode.  
 LIFETIME = Created by DFHSZRIC during INSTALL processing. Deleted by DFHSZRDC during DISCARD processing.  
 STORAGE CLASS = 31-bit addressable.  
 LOCATION = Located from the DFHSZDCD which describes the connection to which this extension relates. The DCD may be located from the DFHSZDPD which owns the connection.  
 INNER CONTROL BLOCKS =  
 NOTES :  
 DEPENDENCIES = S/370  
 RESTRICTIONS =  
 MODULE TYPE = Control block definition  
 EXTERNAL REFERENCES =  
 DATA AREAS =  
 CONTROL BLOCKS = DFHSZDEC (Eyecatcher structure definition)  
 GLOBAL VARIABLES (Macro pass) =

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	248	DFHSZDDS

End of portion that must match DFHSZDQE  
 P1GPTR is also the base address of the area whose length is contained in DLENGTH. This is the address used to release storage if the connection is discarded.  
 P1APTR thru P1CPTR are the base addresses of the various attribute planes needed to support 3270. The storage for all of the planes is obtained at BIND time.  
 P1CPTR is only allocated if one of the 3279 device-types was specified.  
 P1X, P1S and P1V are only allocated if the EDS flag is set in the LU profile at BIND time.  
 This allows for a storage efficient operating mode of non-EDS monochrome.

(30)	ADDRESS	4	SZD_DS_P1GPTR	graphic plane pointer
(34)	ADDRESS	4	SZD_DS_P1APTR	attribute plane
(38)	ADDRESS	4	SZD_DS_P1XPTR	ext. hilite plane
(3C)	ADDRESS	4	SZD_DS_P1SPTR	Char. selection plane
(40)	ADDRESS	4	SZD_DS_P1VPTR	xparency/validation
(44)	ADDRESS	4	SZD_DS_P1CPTR	Colour plane

CCP is the current cursor position. It is affected by inbound datastream and by API keystroke or image data.

(48)	FULLWORD	4	SZD_DS_CCP	current cursor pos.
------	----------	---	------------	---------------------

CBA provides a common index value into all of the data planes identified above. It represents the 3270's perception of where buffer activity will take place.

(4C)	FULLWORD	4	SZD_DS_CBA	current buffer address
(50)	FULLWORD	4	SZD_DS_TBPA	temp. buffer address
(54)	FULLWORD	4	SZD_DS_DBPA	dest. buffer address

(68)	FULLWORD	4	SZD_DS_LA	last attribute index
(6C)	FULLWORD	4	SZD_DS_IDPTR	input data index
(70)	FULLWORD	4	SZD_DS_MDPTR	modified data index
(74)	ADDRESS	4	SZD_DS_IDATA	input data address
(78)	FULLWORD	4	SZD_DS_IDLEN	input data length
(7C)	FULLWORD	4	SZD_DS_CHAIN	chain save area

Offset Hex	Type	Len	Name (Dim)	Description
<p>Implicit partition (00) dimension information PSIZE is calculated at BIND time and is used to determine the amount of dynamic storage required and to detect wraparound during buffer processing. It is recalculated each time the session is bound or an ERASE/WRITE is received. Default default and alternate sizes are set based upon the device-type value provided in the pool. When the BIND is received, the BIND values override. The BIND also determines whether or not the device can switch between default and alternate.</p>				
(80)	FULLWORD	4	SZD_DS_PSIZE	plane size
(84)	BITSTRING	1	SZD_DS_P SX	PS width (current)
(85)	BITSTRING	1	SZD_DS_P SY	PS depth -do-

## FEP19 Terminal simulation facility

CONTROL BLOCK NAME = DFHSZDSR  
 DESCRIPTIVE NAME = CICS (FEPI) Terminal Simulation Facility  
 FUNCTION = Identifies the nodes and targets associated with a given resource pool.  
 One DSR is created for each node and target associated with each pool. It contains a pointer to either a node or target (depending upon which it represents)  
 LIFETIME = for the life of a node-pool or target-pool association. Created during INSTALL POOL/ ADD POOL processing, and deleted as a result of DISCARD POOL, DISCARD NODE, DISCARD TARGET or DELETE POOL processing.  
 STORAGE CLASS = 31-bit addressable  
 LOCATION = The DSR may be located from the DPD, DND or DTD data areas.  
 INNER CONTROL BLOCKS = DFHSZDEC eyecatcher data structure.  
 NOTES :  
 DEPENDENCIES = S/370  
 RESTRICTIONS =  
 MODULE TYPE = Control block definition  
 EXTERNAL REFERENCES =  
 DATA AREAS =  
 CONTROL BLOCKS =  
 GLOBAL VARIABLES (Macro pass) =

Offset Hex	Type	Len	Name (Dim)	Description

## FLLBC File control locks locator block

CONTROL BLOCK NAME = DFHFLB  
 DESCRIPTIVE NAME = CICS FC Locks Locator Block (FLLB)  
 FUNCTION =  
 DFHFLB describes the DSECT for the File Control Locks Locator Block. This block records a UOW that held locks for a Lost Locks data set or a UOW for which the 'override' condition exists for a data set it is using, or a UOW which made updates to an RLS file prior to an OFFSITE=YES restart being performed. The override, or 'NonRLSupdatePermitted', condition is returned by VSAM when a file is opened with RLS access for a dataset which has had its retained locks overridden by a non-RLS batch program. Offsite recovery occurs when a remote site recovery is performed which involves data sets that were open in RLS mode. In the case of the Lost Locks condition and for offsite recovery, FLLBs are created by DFHFCRR. In the case of the override condition, FLLBs are created by DFHFCO1 immediately after a file open which has returned the 'override' reason code. In all cases the FLLBs are chained from both the associated DSNB and the associated FRAB. The address of the head of the FLLB chain in the DSNB is at field FCTBC\_FLLB\_CHAIN, and in the FRAB is at field FRAB\_FRAB\_FLLB\_CHAIN\_ADDRESS. There is one FLLB per file per UOW. FLLBs are getmained from the FLLB subpool which is created by DFHFCRP during File Control Initialisation. File Control Locks Locator Blocks are freemained by DFHFCRC when lost locks recovery has been completed or by DFHFCRC at commit time when there are no longer any flabs with retain\_reason of not\_retained for the dataset.

LIFETIME =  
 In the case of Lost Locks condition :  
 Created when processing lost locks at RLS restart.  
 Deleted at end of Lost Locks Recovery.  
 In the case of the override condition :  
 Created when a file is opened for a data set that VSAM has recorded as having had retained locks overridden by a non-RLS batch program.  
 Deleted at commit time by DFHFCRC.  
 In the case of offsite recovery :  
 Created when processing an OFFSITE=YES RLS restart.  
 Deleted at commit time by DFHFCRC.

## KCB Kernel anchor block

CONTROL BLOCK NAME = DFHKEGBL  
 DESCRIPTIVE NAME = CICS (KE) Kernel Global.  
 FUNCTION =  
 Kernel's Anchor for all other control blocks.  
 This anchor points to kernel programs, domain and task tables.  
 These blocks are described in DFHKECB.  
 The Kernel Anchor is addressed in two ways:  
 First, if the Kernel is Called the R13 -> Linkage that identifies the Kernel Global.  
 Secondly, the KCB can be addressed from the AFCS via low core, the TCB Extension and the AFCS.  
 The AFCS/AFCS/AFT is defined in DFHAFCP, a PLAS copy book.  
 LIFETIME = One per Space, for the duration of the CICS Run.  
 STORAGE CLASS =  
 LOCATION = See Above.  
 INNER CONTROL BLOCKS =  
 NOTES :

 This file contains the control block and constant declarations used by the Loader domain.  
 The file is included by each Loader domain module.

The control blocks are:  
 APE - Active Program Element.  
 BLDL - BLDL PARAMETER LIST.  
 CPE - Current Program Element.  
 CSECTL - CSECT LIST BLOCK AND ENTRY.  
 DUMMY\_CDE - used by SLD  
 DUMMY\_XTLST - used by SLD  
 DUMP - LOADER DUMP CODES.  
 GLOBAL - Loader global storage area.  
 LAFPB - LOADER AUTHORISED FACILITIES PARAMETER BLOCK.  
 LDBE - Loader Domain Browse Element.  
 LDWE - Loader Domain Wait Element.  
 LOB - LOADER OPTION BLOCK.  
 MSGS - LOADER MESSAGE NUMBERS.  
 PDB - Program Descriptor Block.  
 TRACE - Trace point definitions.

Each control block declaration is followed by the constant declarations related to it.

Notes:  
 Dependencies = S/370  
 Restrictions = none  
 Register Conventions = domain standard (no special usage)  
 Patch Label = N/A  
 Module Type = N/A  
 Attributes = N/A  
 A P E - ACTIVE PROGRAM ELEMENT  
 -----

For each instance of a program currently loaded there will be a associated APE. A program instance is associated with it's definition by chaining the APE to the CPE (Current Program Element).

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	136	APE	
(0)	CHARACTER	48	APE_PREFIX	
(0)	UNSIGNED	2	APE_LENGTH	APE control block length
(2)	CHARACTER	1	APE_ARROW	Control Block eyecatcher
(3)	CHARACTER	3	APE_DFH	
(6)	CHARACTER	2	APE_DOMAIN	
(8)	CHARACTER	8	APE_BLOCK_ID	
(10)	CHARACTER	8	APE_PROGRAM_NAME	Program name

Offset Hex	Type	Len	Name (Dim)	Description
APE Chain Fields, there are three APE chains: 1.The Global APE chain which is anchored in LD Global. This contains all the APEs in the system in ascending order of entry point. 2.The CPE/APE chain which is anchored in the CPE. This chains all the instances of a program to the program definition. The most recently acquired instance is at the head of the chain. 3.The APE Not-In-Use (NIU) chain which is anchored in LD Global This contains all the APEs in the system which have a use count of zero and are defined as REUSABLE. During program compression these programs are eligible to be removed. APEs are added to the head of the chain and only removed if the program is freemained or reused.				
(18)	CHARACTER	24	APE_CHAIN_FIELDS	APE chain fields.
(18)	ADDRESS	4	APE_NEXT	-> next APE in Global APE chain.
(1C)	ADDRESS	4	APE_PRIOR	-> previous APE in Global APE chain.
(20)	ADDRESS	4	APE_OLDER_APE	-> older APE in CPE/ APE chain
(24)	ADDRESS	4	APE_YOUNGER_APE	-> younger APE in CPE /APE chain
(28)	ADDRESS	4	APE_OLDER_APE_NIU	-> older APE in APE NIU chain.
(2C)	ADDRESS	4	APE_YOUNGER_APE_NIU	-> younger APE in APE NIU chain.
(30)	ADDRESS	4	APE_OWNING_CPE	Address of owning CPE
The Program Descriptor Block (PDB) is copied into the APE.				
(34)	CHARACTER	16	APE_PDB	Prog Descriptor flds
(44)	UNSIGNED	1	APE_STATUS	Status: active/freed
Attributes of the program associated with this APE.				
(45)	UNSIGNED	1	APE_FLAGS	Attributes of program instance
	1... ..		APE_LPA_LOADED	Program LPA resident
	.1.. ..		APE_RPL_LOADED	Program RPL loaded
	..1. ....		APE_REGION_LOADED	Program region loaded
	...1 ....		APE_RMODE_ANY	Program RMODE ANY
	.... 1...		APE_MUSTDELET	= PMARL_MUSTDELET
	.... .1..		*	Reserved
	.... ..1.		APE_AMODE_31	Program AMODE 31
	.... ...1		APE_AMODE_24	Program AMODE 24
(46)	UNSIGNED	1	APE_RECOVERY_FLAGS	Prog loaded during init.
	1... ..		APE_BUILT_BY_RESTART	Reserved
	.111 1111		*	Reserved
(47)	UNSIGNED	1	*	Reserved
(48)	FULLWORD	4	APE_COPY_NUMBER	Copy no. of the APE
(4C)	FULLWORD	4	APE_LOAD_POINT	Load point of program
(50)	FULLWORD	4	APE_ENTRY_POINT	Entry point of program
(54)	FULLWORD	4	APE_PROGRAM_LENGTH	length of program
(58)	FULLWORD	4	APE_CURRENT_USERS	No. of users
(5C)	FULLWORD	4	APE_STORAGE_SIZE	storage allocated to prog.
(60)	CHARACTER	12	APE_SUBPOOL_DATA	Subpool prog. was getmained from
(60)	CHARACTER	8	TOKEN	
(68)	UNSIGNED	4	DSA	
(6C)	FULLWORD	4	APE_CSECT_LIST_SIZE	No. of CSECT list blocks chained to this APE.
(70)	CHARACTER	8	APE_CSECT_LIST_CHAIN_FIELDS	Next and prior ptrs
(78)	CHARACTER	8	APE_ON_NIU_TIME	Time APE put on NIU chain
(80)	ADDRESS	4	APE_DUMMY_CDE	-> to dummy CDE
If APE_MUSTDELET is set, delete needs the loader token ...				
(84)	FULLWORD	4	APE_BLITO	offset within program
(88)	CHARACTER		*	

**BLDL\_LIST - BLDL PARAMETER LIST**  
 The BPAM directory entry is built by the MVS LLACOPY interface and contains a copy of the directory entry from the Partitioned Dataset (PDS) containing the named program.  
 The BLDL parameter list passed on the LLACOPY is a series of directory entries preceded by entry count and entry length fields.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	22	BLDL_LIST	
(0)	CHARACTER	18	BLDL_PREFIX	Control block eyecatcher
(0)	FULLWORD	4	BLDL_LENGTH	Control block length
(4)	CHARACTER	1	BLDL_ARROW	
(5)	CHARACTER	3	BLDL_DFH	

Offset Hex	Type	Len	Name (Dim)	Description
(8)	CHARACTER	2	BLDL_DOMAIN	
(A)	CHARACTER	8	BLDL_BLOCK_ID	
The BLDL macro parameter list				
(12)	CHARACTER	4	BLDL_MACRO_PLIST	
(12)	UNSIGNED	2	BLDL_NUMBER_IN_LIST	No of entries in list
(14)	UNSIGNED	2	BLDL_LENGTH_OF_ENTRY	
(16)	CHARACTER		BLDL_ENTRIES	Length of BLDL list The BLDL entries

The BLDL\_LIST\_ENTRY is a duplicate of the PDS entry for the program, hence, do not attempt to use any of the reserved fields.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	60	BLDL_LIST_ENTRY	BLDL list entry
(0)	CHARACTER	8	BLDL_PROGRAM_NAME	Program name
(8)	UNSIGNED	4	BLDL_TTRK	Track and record data

(22)	CHARACTER	26	*	Reserved

C P E - CURRENT PROGRAM ELEMENT  
-----  
A Current Program Element represents a program defined to Loader.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	176	CPE	
(0)	CHARACTER	24	CPE_PREFIX	Standard prefix
(0)	UNSIGNED	2	CPE_LENGTH	Control block length
(2)	CHARACTER	1	CPE_ARROW	Control block eyecatcher
(3)	CHARACTER	3	CPE_DFH	
(6)	CHARACTER	10	CPE_EYE_CATCH	
(6)	CHARACTER	2	CPE_DOMAIN	
(8)	CHARACTER	8	CPE_BLOCK_ID	
CPE chain is anchored in LD Global. It contains all the CPEs ( programs currently defined to the system ) stored in alphabetical order by program name.				
(10)	ADDRESS	4	CPE_NEXT	-> next CPE in chain
(14)	ADDRESS	4	CPE_PRIOR	-> previous CPE in chain

Offset Hex	Type	Len	Name (Dim)	Description
<p>The following are valid CPE statuses:            UNUSED - program has been defined but not yet acquired.            LOCATED - An LLACOPY has been issued for the program and it has been found in the DFHRPL library.            LOADED - The program has been loaded. It should be noted that a CPE defined as RELOAD will never have the status updated to loaded, hence, on every acquire a new program instance is loaded. Also, if a REFRESH PROGRAM is requested (CEMT S NEWCOPY) the status will be reduced to LOCATED for a DFHRPL loaded program.            DELETED - The program definition has been deleted ie DELETE_PROGRAM has been issued. The CPE has not been freemained as there are still active APEs chained off it. The CPE will be freemained when all the active APEs are released.            BAD - Invalid data has been detected in the CPE, hence, it is marked as unusable.            FREED - The CPE has been freemained. This status is solely to mark deleted CPEs in the case where they are not overwritten and they appear in a dump.</p>				
(18)	UNSIGNED	1	CPE_PROGRAM_STATUS	Status of the program
<p>The CPE control block lock is used to ensure that it is not possible to have multiple updates of a CPE. While a CPE is locked no other task may access it.            UNLOCKED - No task is currently attempting to update the CPE.            LPA_LOCATING - A task is currently attempting to locate a program in the LPA.            RPL_LOCATING - A task is currently attempting to locate a program in the DFHRPL library.            RPL_LOADING - A task is currently attempting to load a program from thr DFHRPL library.            DISCONNECTING - A task is currently disconnecting from the member in RPL</p>				
(19)	UNSIGNED	1	CPE_LOCK	CPE lock field
(1A)	UNSIGNED	1	CPE_RECOVERY_FLAGS	CPE built during init.
	1... ..		CPE_BUILT_BY_RESTART	
	.1.. ..		CPE_LOADED_BY_RESTART	Program loaded during init
	..1. ....		CPE_PRIVMOD	Program should be loaded from RPL even though it is resident in the LPA
	...1 ....		CPE_PROGRAM_ACQUIRED	
	.... 1..		CPE_OLD_COPY_IN_LPA	program loaded and has been ACQUIRED
	.... .1..		CPE_PMARL_VALID	Program has already been defined and is resident in the LPA. PMARL has been fetched@LEA = PMARL_MUSTDELET Reserved
	.... .1.		CPE_MUSTDELET	
	.... ...1		*	
(1B)	UNSIGNED	1	CPE_PDB_CATALOG_STATUS	Shows if PDB has been cataloged
<p>The CPE_DE (directory entry) is copied from the BLDL_LIST_ENTRY ,obtained when the LLACOPY is issued for the program. For details of the fields see the BLDL_LIST_ENTRY.</p>

(3E)	CHARACTER	26	*	

Offset Hex	Type	Len	Name (Dim)	Description
The Program Descriptor Block (PDB) is copied in here.				
(58)	CHARACTER	16	CPE_PDB	
CPE statistics				
(68)	FULLWORD	4	CPE_USES	Cummulative count of the no. of times a program is acquired.
(6C)	FULLWORD	4	CPE_CURRENT_USERS	No. of current users.
(70)	FULLWORD	4	CPE_LOAD_COUNT	No. of times a program has been loaded
CPE APE chain This chain contains an APE for each instance of THIS program currently in main storage. New APEs are added to the head of chain.				
(74)	FULLWORD	4	CPE_APE_CHAIN_SIZE	No. of APEs currently chained to this CPE
(78)	CHARACTER	24	CPE_APE_CHAIN_FIELDS	
CPE statistics These figures are the official statistics and are reset at the end of a statistics collection.				
(90)	CHARACTER	24	CPE_STATS	
(90)	FULLWORD	4	CPE_TIMES_USED	Cummulative count of the no. of times a program is acquired.
(94)	FULLWORD	4	CPE_FETCH_COUNT	No. of times a program has been loaded from the RPL or located in the LPA.
(98)	FULLWORD	4	CPE_LOAD_TIME	Cummulative load duration for all MVS loads.
(9C)	FULLWORD	4	CPE_COMPRESSIONS	No. of times a copy of this program has been removed due to proram compression
(A0)	FULLWORD	4	CPE_WAITS	No. of times tasks were forced to wait due to the CPE being locked.
(A4)	FULLWORD	4	CPE_REFRESHES	No. of times the program has been refreshed.
(A8)	ADDRESS	4	CPE_GLOB_PTR	-> back to global
(AC)	FULLWORD	4	CPE_BLITO	Offset to IEWBLIT
(B0)	CHARACTER		*	

**C E S E C T L - CSECT LIST**

The CESCTL list contain the CSECT name ,the address of the CSECT, the CICS version, the PTF level and time the CSECT was last updated. A CESCTL only contains four entries, therefore, several CESCTL blocks maybe chained off the APE. The CSECT details are obtained from the header data.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	176	CSECTL	
(0)	CHARACTER	24	CSECTL_PREFIX	Control block prefix
(0)	UNSIGNED	2	CSECTL_LENGTH	Control block length

(14)	ADDRESS	4	CSECTL_PRIOR	->to previous CSECTL block
CSECTL list entries.				
(18)	CHARACTER	38	CSECTL_ENTRIES (4)	

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	38	CSECTL_ENTRY	
(0)	CHARACTER	8	CSECTL_MODULE	CSECT name
(8)	ADDRESS	4	CSECTL_ADDRESS	Address of CSECT
(C)	CHARACTER	4	CSECTL_CICS_VERSION	CICS version
(10)	CHARACTER	8	CSECTL_PTF_LEVEL	PTF level of CSECT
(18)	CHARACTER	14	CSECTL_CREATION	Time CSECT last updated

**C D E - DUMMY CDE**

-----

The DUMMY CDE is used by SLD to detect mdules loaded by the CICS Loader. As the MVS LOADs are directed no CDE is built so we have to supply a dummy one so SLD can set its breakpoints.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	56	DUMMY_CDE	

Offset Hex	Type	Len	Name (Dim)	Description
(0)	CHARACTER	24	DUMMY_CDE_PREFIX	
(0)	UNSIGNED	2	DUMMY_CDE_LENGTH	
(2)	CHARACTER	1	DUMMY_CDE_ARROW	
(3)	CHARACTER	3	DUMMY_CDE_DFH	
(6)	CHARACTER	2	DUMMY_CDE_DOMAIN	
(8)	CHARACTER	8	DUMMY_CDE_BLOCK_ID	
(10)	CHARACTER	8	DUMMY_CDE_CHAIN	
(10)	ADDRESS	4	DUMMY_CDE_NEXT	
(14)	ADDRESS	4	DUMMY_CDE_PREV	

The following must be kept in step with the IHACDE DSECT SLD should only check CDCHAIN, CDNAME, CDEPTPT AND CDXMLJP.

(18)	CHARACTER	32	DUMMY_CDE_CONTENTS	
(18)	ADDRESS	4	DUMMY_CDCHAIN	-> next CDE
(1C)	ADDRESS	4	*	Reserved
(20)	CHARACTER	8	DUMMY_CDNAME	Name
(28)	FULLWORD	4	DUMMY_CDEPTPT	Entry point top bit set for amode
(2C)	ADDRESS	4	DUMMY_CDXMLJP	-> extent list (XTLST)
(30)	CHARACTER	8	*	Reserved

**X T L S T - Dummy Extent List**

-----  
 The DUMMY XTLST is used by SLD to detect modules loaded by the CICS Loader. As the MVS LOADs are directed no CDE or extent lists are built so we have to supply dummy ones so SLD can set its breakpoints.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	16	DUMMY_XTLST	

The following must be kept in step with the IHAXTLST DSECT SLD should only check XTLMBSLA and XTLMBSAA.

(0)	CHARACTER	8	*	Reserved
(8)	FULLWORD	4	DUMMY_XTLMBSLA	Pgm length
(C)	ADDRESS	4	DUMMY_XTLMBSAA	Load point

**G L O B A L - LOADER GLOBAL AREA**

The Loader Global area (anchor block) contains the domain status indicator, storage subpool tokens, lock tokens, CPE chain anchor, APE chain anchor, APE NIU chain anchor and the statistics buffer anchor.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	912	GLOBAL	
(0)	UNSIGNED	2	GLOBAL_LENGTH	Control block length
(2)	CHARACTER	1	GLOBAL_ARROW	Control block eyecatcher
(3)	CHARACTER	3	GLOBAL_DFH	
(6)	CHARACTER	2	GLOBAL_DOMAIN	
(8)	CHARACTER	8	GLOBAL_BLOCK_ID	

**Loader Domain Status Flags**

(10)	BITSTRING	2	LD_DOMAIN_STATUS	Status of Loader domain
(12)	UNSIGNED	1	LD_RPL_STATUS	Status of DFHRPL library
(13)	UNSIGNED	1	LD_LPA_STATUS	Status of LPA

	.... ..11		*	Reserved
(15)	BITSTRING	1	*	Reserved
(16)	UNSIGNED	1	LD_LLACOPY_STATUS	LLACOPY status
(17)	UNSIGNED	1	LD_SLD	SLD support?

**Storage Manager subpool tokens for Loader managed subpools.**

(18)	CHARACTER	8	LD_CONTROL_POOL	Control subpool token
------	-----------	---	-----------------	-----------------------

Offset Hex	Type	Len	Name (Dim)	Description
(20)	CHARACTER	8	LD_APE_CELL_POOL	APE subpool token
(28)	CHARACTER	8	LD_CSECTL_CELL_POOL	CSECTL subpool token
(30)	CHARACTER	8	LD_CPE_CELL_POOL	CPE subpool token
(38)	CHARACTER	8	LD_DUMMY_CDE_POOL	DUMMY_CDE subpool token
(40)	CHARACTER	12	LD_SUBPOOL_DATA2 (12)	Array of program subpools
(40)	CHARACTER	8	TOKEN2	Subpool token
(48)	UNSIGNED	4	DSA2	DSA identifier
Lock tokens				
(D0)	ADDRESS	4	LD_STATE_LOCK	Loader state lock token
(D4)	ADDRESS	4	LD_LIBRARY_LOCK	Loader library lock token
Loader chains				
There are six Loader chains anchored in Global storage:				
1. Global CPE chain - this contains all the CPEs (in alphabetical order of program name) for all the programs currently defined to the system.				
2. Global APE chain - this contains an APE for every program instance currently residing in CICS storage. Entries are in ascending order of entry point.				
3. The APE NIU chain - contains all the APEs associated with programs defined as REUSABLE which have a use count of zero. These programs are eligible to be removed on program compression.				
4. The LDWE chain - this contains a Loader Wait Element for each task that has been suspended due to a CPE being locked. LDWEs are added to the top of the chain.				
5. The LDBE chain - this chain contains a Loader Browse Element for each currently active browse session. New entries are added to the head of the chain.				
6. The DUMMY_CDE chain - managed on behalf of SLD. There is one CDE per loaded program.				
(D8)	FULLWORD	4	CPE_CHAIN_SIZE	Global CPE chain size
(DC)	CHARACTER	24	CPE_ANCHOR	
(F4)	FULLWORD	4	APE_CHAIN_SIZE	Global APE chain size
(F8)	FULLWORD	4	APE_NIU_CHAIN_SIZE	APE NIU chain size
(FC)	CHARACTER	48	APE_ANCHOR	
(12C)	FULLWORD	4	LDWE_CHAIN_SIZE	LDWE chain size
(130)	CHARACTER	24	LDWE_ANCHOR	
(148)	FULLWORD	4	LDBE_CHAIN_SIZE	LDBE chain size
(14C)	CHARACTER	24	LDBE_ANCHOR	
(164)	CHARACTER	24	DUMMY_CDE_ANCHOR	Dummy CDE chain
(17C)	ADDRESS	4	PRVMOD_PTR	-> area holding prog names that require loading from RPL rather than LPA
Global statistics				
(180)	ADDRESS	4	LD_STATS_BUFFER_PTR	-> Loader stats buffer
(184)	FULLWORD	4	STA_DEFINES	No. of DEFINE_PROGRAMs
(188)	FULLWORD	4	STA_DELETES	No. of DELETE_PROGRAMs
(18C)	FULLWORD	4	STA_INQUIRES	No. of INQUIRE_PROGRAMs
(190)	FULLWORD	4	STA_REFRESHES	No. of REFRESH_PROGRAMs
(194)	FULLWORD	4	STA_BROWSES	No. of START_BROWSEs
(198)	FULLWORD	4	STA_NOTIFIES	No. of SM notify calls received.
long name cache stats				
No. of times long name longer than cache key length				
(19C)	FULLWORD	4	STA_NAME2LONG	
Length of longest name given to CONVERT_NAME				
(1A0)	FULLWORD	4	STA_LONGEST_NAME	
No. of adds to cache = max cache size

(8)	CHARACTER	8	LAFPB_BLOCK_ID	
(10)	UNSIGNED	1	LAFPB_FUNCTION	Required auth. function
(11)	UNSIGNED	1	LAFPB_RESPONSE	Response from function
(12)	UNSIGNED	2	*	Reserved
Abend data saved on a LOAD failure				
(14)	UNSIGNED	2	LAFPB_ABEND	
(16)	UNSIGNED	2	LAFPB_REASON	
(18)	UNSIGNED	4	LAFPB_R0	

The following fields are used for RPL loads.  
 For DISCONNECT, LAFPB\_BLDL\_PLIST contains the MLTK.  
 For GET\_SMDE, LAFPB\_BLDL\_PLIST points at name list.  
 For LOAD\_WITH PMARL, the PMARL is returned in LAFPB\_DESERV\_AREA  
 For END, LAFPB\_DESERV\_AREA addresses the  
 Loader Information Table, mapped by IEWBLIT.

(1C)	ADDRESS	4	LAFPB_BLDL_PLIST	-> to BLDL_LIST
(20)	ADDRESS	4	LAFPB_LOAD_POINT	-> for directed load
(24)	CHARACTER	8	LAFPB_CREATION_STCK	time LAFPB created
(2C)	ADDRESS	4	LAFPB_DESERV_AREA	-> space for result
(30)	FULLWORD	4	LAFPB_DESERV_AREAL	length of result area
(34)	CHARACTER		*	

**L D B E - LOADER DOMAIN BROWSE ELEMENT**

-----  
 The LDBE represents a browse session. It contains the address of the last CPE browsed, the program name from the last CPE browsed, the address of the last APE browsed, the entry point address from the last APE browsed and the creation time of the LDBE.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	52	LDBE	
(0)	CHARACTER	24	LDBE_PREFIX	Control block prefix
(0)	UNSIGNED	2	LDBE_LENGTH	Control block length
(2)	CHARACTER	1	LDBE_ARROW	Control block eyecatcher
(3)	CHARACTER	3	LDBE_DFH	
(6)	CHARACTER	2	LDBE_DOMAIN	
(8)	CHARACTER	8	LDBE_BLOCK_ID	
(10)	ADDRESS	4	LDBE_NEXT	-> next LDBE in chain
(14)	ADDRESS	4	LDBE_PRIOR	-> previous LDBE in chain
(18)	ADDRESS	4	LDBE_LAST_ CPE_ADDRESS	
(1C)	ADDRESS	4	LDBE_LAST_ APE_ADDRESS	Addr last CPE browsed
(20)	ADDRESS	4	LDBE_LAST_ENTRY_POINT	Addr last APE browsed
(24)	CHARACTER	8	LDBE_LAST_ PROGRAM_NAME	Entry point from APE
(2C)	CHARACTER	8	LDBE_CREATION_STCK	Program name from CPE
(34)	CHARACTER	*	*	Time LDBE was created

## L D W E - LOADER DOMAIN WAIT ELEMENT

-----

The LDWE represents a task that has been suspended because the CPE it requires is currently locked. The LDWE contains the name of the program the task is waiting for, the associated suspend token and the time the LDWE was created.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	52	LDWE	
(0)	CHARACTER	24	LDWE_PREFIX	Control block prefix
(0)	UNSIGNED	2	LDWE_LENGTH	Control block length
(2)	CHARACTER	1	LDWE_ARROW	Control block eyecatcher
(3)	CHARACTER	3	LDWE_DFH	
(6)	CHARACTER	2	LDWE_DOMAIN	
(8)	CHARACTER	8	LDWE_BLOCK_ID	
(10)	ADDRESS	4	LDWE_NEXT	-> next LDWE on chain
(14)	ADDRESS	4	LDWE_PRIOR	-> previous LDWE on chain
(18)	ADDRESS	4	LDWE_SUSPEND_TOKEN	Dispatcher suspend token
(1C)	ADDRESS	4	LDWE_CPE_ADDRESS	Addr. of locked CPE
(20)	CHARACTER	8	LDWE_PROGRAM_NAME	Name of program
(28)	CHARACTER	8	LDWE_CREATION_STCK	Time LDWE created
(30)	FULLWORD	4	LDWE_RESUME_ REQUIRED	
(34)	CHARACTER	*	*	Flag to indicate task requires resuming

## L O B - LOADER OPTION BLOCK

-----

The LOB is used to save Loader SIT parameters (LPA usage and storage factor) and the sizes of the resident subpools. These figures are used on restart. It should be noted that irregardless of the type of start Loader always attempts to read the LOB from the catalog.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	24	LOB	
(0)	FULLWORD	4	LOB_STORAGE_FACTOR	Loader storage factor
(4)	UNSIGNED	1	LOB_LPA_STATUS	LPA status
(5)	UNSIGNED	1	LOB_LLACOPY_STATUS	
(6)	CHARACTER	2	*	

The resident subpool sizes. These are read from the catalog at initialisation and used to recreate the subpools with the same INITIAL\_FREE size as on the previous CICS run.

(8)	UNSIGNED	4	LOB_APE_ CELL_POOL_SIZE	APE subpool size
(C)	UNSIGNED	4	LOB_CSECTL_ CELL_POOL_SIZE	CSECTL subpool size
(10)	CHARACTER	8	LOB_CREATION_STCK	Time LOB created

Offset Hex (18)	Type	Len	Name (Dim)	Description
	CHARACTER		*	

P D B - PROGRAM DESCRIPTOR BLOCK  
 -----  
 A PDB describes a programs attributes.It is this control block that is written to one of the catalogs each time a program is defined ( unless CATALOG\_ MODULE(NO) is specified). On restart the PDBs are retrieved from the catalogs and CPEs are built.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	16	PDB	
(0)	CHARACTER	16	PDB_DESCRIPTOR_FIELDS	
PROGRAM_TYPE maybe PRIVATE, SHARED or TYPE_ANY. PRIVATE means the program will always be loaded into CICS managed storage. SHARED means the program resides in the LPA. TYPE_ANY means an LPA version of the program will be used if there is one otherwise an RPL version will be loaded.				
(0)	UNSIGNED	1	PDB_PROGRAM_TYPE	Where to load the program from
PROGRAM_USAGE maybe NUCLEUS or APPLICATION. If NUCLEUS is specified the PDB will be written to the LCD. If APPLICATION is specified the PDB will be written to the GCD.				
(1)	UNSIGNED	1	PDB_PROGRAM_USAGE	Where to catalog the definition
PROGRAM_ATTRIBUTE maybe RESIDENT, REUSABLE, TRANSIENT or RELOAD RESIDENT programs must be at least quasi_reentrant and are not eligible program compression.REUSABLE programs must be at least quasi_reentrant and are eligible for program compression. TRANSIENT programs must be at least quasi_reentrant and are removed from storage as soon as the use count reaches zero. RELOAD programs do not need to be reentrant a new version of the program is loaded each time the program is ACQUIRED. Such a program is removed from storage when it is RELEASED.				
(2)	UNSIGNED	1	PDB_PROGRAM_ATTRIBUTE	Prog load attribute
(3)	UNSIGNED	1	PDB_REQUIRED_RMODE	RMODE of the program, 24, ANY or default
(4)	UNSIGNED	1	PDB_REQUIRED_AMODE	AMODE of the program 31 24,ANY or default@P3A
(5)	UNSIGNED	1	PDB_CATALOG_MODULE	Indicates whether PDB should be cataloged
(6)	UNSIGNED	1	PDB_EXECUTION_KEY	EXECKEY of the program, CICS or USER
(7)	CHARACTER	1	*	reserved
(8)	CHARACTER	8	PDB_CREATION_STCK	Time PDB created
(10)	CHARACTER		*	

## Constants

Len	Type	Value	Name	Description
8	CHARACTER	APE	APE_ID_STRING	
8	CHARACTER	APE-ANCH	APE_ANCHOR_ID	
8	CHARACTER	CPE-APE	CPE_APE_ANCHOR_ID	
APE status				
1	HEX	80	APE_ACTIVE	
1	HEX	FF	APE_FREED	
BLDL associated constants.				
8	CHARACTER	BLDL_LST	BLDL_ID_STRING	
CPE associated constants.				
8	CHARACTER	CPE	CPE_ID_STRING	
8	CHARACTER	CPE-ANCH	CPE_ANCHOR_ID	
CPE program status				
1	HEX	00	CPE_UNUSED	Program defined
1	HEX	01	CPE_LOCATED	Program defined and located
1	HEX	02	CPE_LOADED	Program defined, located and loaded
1	HEX	0F	CPE_DELETED	Program definition deleted
1	HEX	F0	CPE_BAD	Corrupt CPE
1	HEX	FF	CPE_FREED	CPE freemained
CPE catalog status				
1	HEX	03	CPE_CC_DONE	PDB cataloged

Len	Type	Value	Name	Description
1	HEX	04	CPE_CC_REQD	PDB requires cataloging
CPE lock values. APE_CREATING and CSECTL_CREATING can occur while other CPE locks are held. They are added to the existing locks temporarily when SOS and a GETMAIN with SUSPEND(YES) is issued. Therefore, X'10' to X'13' and X'20' to X'23' are reserved.				
1	HEX	00	CPE_UNLOCKED	CPE not being updated.
1	HEX	01	CPE_LPA_LOCATING	Program being located in LPA
1	HEX	02	CPE_RPL_LOCATING	Program being located in RPL
1	HEX	03	CPE_RPL_LOADING	Program being loaded from RPL
1	HEX	04	CPE_DISCONNECTING	RPL member being disconnected
1	HEX	10	CPE_APE_CREATING	APE being created for CPE
1	HEX	20	CPE_CSECTL_CREATING	CSECTL lists being created P7A
6	CHARACTER	LDCPE	CPE_EYE_CATCH_I

POST-SVC CALL ( LDLD functional gate) level = 1 module = DFHLDDL3 Generated on return from the Loader's SVC service routine if a normal return code has been presented by the routine. DATA1 = Authorised Facility Plist < DATA2 > = DESERV GET o/p area (DESB)				
2	HEX	390C	TRLD3_SVC_RETURN	
DSA_ COMPRESSION (LDLD functional gate) level = 2 module = DFHLDDL1 Generated when a program instance is selected for deletion from a DSA by the program storage compression algorithms. DATA1 = Active Program Element (APE) DATA2 = DSA name				
2	HEX	1005	TRLD1_DSA_ COMPRESSION	
PRE_ LOAD (LDLD functional gate) level = 1 module = DFHLDDL1 Generated prior to issuing a CSVQUERY call to access an LPA resident module. DATA1 = Program name				
2	HEX	1007	TRLD1_PRE_CSVQUERY	
POST_ LOAD (LDLD functional gate) level = 1 module = DFHLDDL1 Generated after issuing a CSVQUERY call to access an LPA resident module. DATA1 = Program name DATA1 = Return code				
2	HEX	1008	TRLD1_POST_ CSVQUERY	
RECOVERY_ ENTERED ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 This trace entry is put out if the active recovery routine is driven. DATA1 = parameter list DATA2 = Kernel error data				
2	HEX	1701	TRLD1_RECOVERY_ ENTERED	
INVALID_ FUNCTION ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 This trace entry is put out if a call is made to module LDLD1 specifying an invalid function. DATA1 = parameter list				
2	HEX	1801	TRLD1_INVALID_ FUNCTION	

Len	Type	Value	Name	Description
				SVC_ EXCEPTION ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1/DFHLDDMI Generated whenever a bad return code is received from the SVC service routine which provides Loader authorised facilities. DATA1 = Authorised Facility Plist < DATA2 > = BLDL Plist (BLDL or RPL load)
2	HEX	1802	TRLD1_SVC_EXCEPTION	
				SVC_ EXCEPTION ( LDLD functional gate) level = EXCEPTION module = DFHLDDL2 Generated on return from the Loader's SVC service routine if a bad return code has been presented by the routine. DATA1 = Authorised Facility Plist
2	HEX	2906	TRLD2_SVC_EXCEPTION	
				SVC_ EXCEPTION ( LDLD functional gate) level = EXCEPTION module = DFHLDDL3 Generated on return from the Loader's SVC service routine if a bad return code has been presented by the routine. DATA1 = Authorised Facility Plist < DATA2 > = DESERV GET o/p area (DESB)
2	HEX	390D	TRLD3_SVC_EXCEPTION	
				MODE CHANGE FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL3 These trace entries are put out whenever a request for change of dispatch mode fails. DATA1 = Call Parameter list.
2	HEX	390E	TRLD3_MODE_CHANGE	
				Long name value input to CONVERT_ NAME (LDLD gate) level = EXCEPTION the convert has just failed module = DFHLDDL3 DATA1 = LDLD_ LONG_NAME parameter input to convert
2	HEX	3910	TRLD3_LONG_NAME	
				CORRUPT CONTROL BLOCK ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 This trace entry is put out whenever a bad control block field is detected. DATA1 = Control block address. DATA2 = Control block identifier. DATA3 = Control block.
2	HEX	1803	TRLD1_BAD_STRUCTURE	
				LOAD EXCEPTION ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 Generated whenever a CSVQUERY call fails to locate a module in the LPA. DATA1 = Program name DATA1 = Return code
2	HEX	1804	TRLD1_CSVQUERY_EXCEPTION	
				APE GETMAIN FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 This trace entry is put out whenever a GETMAIN for an APE fails. DATA1 = Call Parameter list.
2	HEX	1903	TRLD1_APE_GETMAIN	
				CSECTL GETMAIN FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 This trace entry is put out whenever a GETMAIN for a CSECTL fails. DATA1 = Call Parameter list.
2	HEX	1905	TRLD1_CSECTL_GETMAIN	
				PGM GETMAIN FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 This trace entry is put out whenever a GETMAIN for program storage. DATA1 = Call Parameter list.
2	HEX	1907	TRLD1_PGM_GETMAIN	
				CDE GETMAIN FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 This trace entry is put out whenever a GETMAIN for a dummy CDE fails. DATA1 = Call Parameter list.
2	HEX	1928	TRLD1_CDE_GETMAIN_FAIL	
				STATE LOCK FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 These trace entries are put out whenever a LOCK request fails for the state lock. DATA1 = Call Parameter list.
2	HEX	1910	TRLD1_STATE_LOCK	
2	HEX	1911	TRLD1_STATE_LOCK_1	
2	HEX	1912	TRLD1_STATE_LOCK_2	
2	HEX	1913	TRLD1_STATE_LOCK_3	
2	HEX	1914	TRLD1_STATE_LOCK_4	
2	HEX	1902	TRLD1_STATE_LOCK_5	
2	HEX	192D	TRLD1_STATE_LOCK_6	
				STATE UNLOCK FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 These trace entries are put out whenever an UNLOCK request fails for the state lock. DATA1 = Call Parameter list.
2	HEX	1915	TRLD1_STATE_UNLOCK	
2	HEX	1916	TRLD1_STATE_UNLOCK_1	
2	HEX	1917	TRLD1_STATE_UNLOCK_2	
2	HEX	1918	TRLD1_STATE_UNLOCK_3	

Len	Type	Value	Name	Description
2	HEX	1929	TRLD1_STATE_UNLOCK_4	
LIBRARY LOCK FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 These trace entries are put out whenever a LOCK request fails for the library lock. DATA1 = Call Parameter list.				
2	HEX	1919	TRLD1_LIBRARY_LOCK	
2	HEX	191A	TRLD1_LIBRARY_LOCK_1	
2	HEX	191B	TRLD1_LIBRARY_LOCK_2	
2	HEX	192B	TRLD1_LIBRARY_LOCK_3	
2	HEX	3909	TRLD3_LIBRARY_LOCK	
2	HEX	390E	TRLD3_LIBRARY_LOCK_1	
LIBRARY UNLOCK FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 These trace entries are put out whenever an UNLOCK request fails for the library lock. DATA1 = Call Parameter list.				
2	HEX	191C	TRLD1_LIBRARY_UNLOCK	
2	HEX	191D	TRLD1_LIBRARY_UNLOCK_1	
2	HEX	191E	TRLD1_LIBRARY_UNLOCK_2	
2	HEX	191F	TRLD1_LIBRARY_UNLOCK_3	
2	HEX	192C	TRLD1_LIBRARY_UNLOCK_4	
2	HEX	390A	TRLD3_LIBRARY_UNLOCK	
2	HEX	390F	TRLD3_LIBRARY_UNLOCK_1	
MODE CHANGE FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 These trace entries are put out whenever a request for change of dispatch mode fails. DATA1 = Call Parameter list.				
2	HEX	1920	TRLD1_MODE_CHANGE	
2	HEX	1921	TRLD1_MODE_CHANGE_1	
2	HEX	192A	TRLD1_MODE_CHANGE_2	
NO OS STORAGE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL1 Generated whenever an MVS LOAD or BLDL request fails due to lack of OS storage. DATA1 = Call Parameter list.				
2	HEX	1922	TRLD1_NO_OS_STORAGE	
2	HEX	1923	TRLD1_NO_OS_STORAGE_1	
LIBRARY I/O ERROR level = EXCEPTION module = DFHLDDL1 Generated whenever an MVS LOAD or BLDL request fails due to I/O errors on the library. DATA1 = Call Parameter list.				
2	HEX	1924	TRLD1_LIBRARY_IO_ERROR	
2	HEX	1925	TRLD1_LIBRARY_IO_ERROR_1	
SVC REQUEST FAILURE level = EXCEPTION module = DFHLDDL1 Generated whenever an MVS LOAD or BLDL request fails due to no specific reason. DATA1 = Call Parameter list.				
2	HEX	1926	TRLD1_SVC_REQUEST_FAILURE	
2	HEX	1927	TRLD1_SVC_REQUEST_FAILURE_1	
RECOVERY ENTERED ( LDLD functional gate) level = EXCEPTION module = DFHLDDL2 This trace entry is put out if the active recovery routine is driven. DATA1 = parameter list DATA2 = Kernel error data				
2	HEX	2701	TRLD2_RECOVERY_ENTERED	
FAILED CATALOG WRITE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL2 This trace entry is put out if a catalog write request returns a response other than ok. DATA1 = CCCC parameter list. DATA2 = Data to be written.				
2	HEX	2901	TRLD2_CC_WRITE	
2	HEX	2909	TRLD2_CC_WRITE_2	
CATALOG DELETE FAILED ( LDLD functional gate) level = EXCEPTION module = DFHLDDL2 This trace entry is put out if a bad response is returned by the catalog when requested to delete a program definition record as part of a Loader DELETE_ PROGRAM request. DATA1 = CCCC parameter list				
2	HEX	2902	TRLD2_CC_DELETE	
CPE GETMAIN FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL2 This trace entry is put out whenever a GETMAIN for a CPE fails. DATA1 = Call Parameter list.				
2	HEX	2903	TRLD2_CPE_GETMAIN	

Len	Type	Value	Name	Description
RECOVERY ENTERED ( LDLD functional gate) level = EXCEPTION module = DFHLDDL3 This trace entry is put out if the active recovery routine is driven. DATA1 = parameter list DATA2 = Kernel error data				
2	HEX	3701	TRLD3_RECOVERY_ENTERED	
FAILED CATALOG WRITE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL3 This trace entry is put out if a catalog write request returns a response other than ok. DATA1 = CCCC parameter list. DATA2 = Data to be written.				
2	HEX	3901	TRLD3_CC_WRITE	
2	HEX	3905	TRLD3_CC_WRITE_PDB1	
2	HEX	3906	TRLD3_CC_WRITE_PDB2	
2	HEX	3907	TRLD3_CC_WRITE_PDB3	
2	HEX	3908	TRLD3_CC_WRITE_PDB4	
LDBE GET FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL3 This trace entry is put out if a GETMAIN for an LDBE fails whilst processing a start browse. DATA1 = parameter list				
2	HEX	3902	TRLD3_LDBE_GETMAIN	
PRVMOD GETMAIN FAILURE ( LDLD functional gate) level = EXCEPTION module = DFHLDDL3 This trace entry is put out if the GETMAIN for PRVMOD fails. DATA1 = parameter list				
2	HEX	3904	TRLD3_PRVMOD_GETMAIN	
DOMAIN ENTRY ( LDNT SM Notify gate) level = 1 module = DFHLDNT Generated as the first operation on entry to the domain for SM STORAGE_ NOTIFY requests. caller. DATA1 = SMNT Parameter list				
2	HEX	4001	TRNT_ENTRY_TRACE	
DOMAIN EXIT ( LDNT SM Notify gate) level = 1 or EXCEPTION module = DFHLDNT Generated as the final operation prior to performing return via the Kernel to the Loader's caller. DATA1 = SMNT Parameter list				
2	HEX	4002	TRNT_EXIT_TRACE	
RECOVERY ENTERED ( LDNT compression gate) level = EXCEPTION module = DFHLDNT This trace entry is put out if the active recovery routine is driven. DATA1 = parameter list DATA2 = Kernel error data				
2	HEX	4701	TRNT_RECOVERY_ENTERED	
INVALID FORMAT ( LDNT compression gate) level = EXCEPTION module = DFHLDNT This trace entry is put out if a call is made to the LDNT gate using the incorrect parameter list format DATA1 = parameter list				
2	HEX	4801	TRNT_INVALID_FORMAT	
INVALID FUNCTION ( LDNT compression gate) level = EXCEPTION module = DFHLDNT This trace entry is put out if a call is made to the LDNT gate specifying an invalid function. DATA1 = parameter list				
2	HEX	4802	TRNT_INVALID_FUNCTION	
INVALID PARAMETERS ( LDNT compression gate) level = EXCEPTION module = DFHLDNT This trace entry is put out if an invalid combination of parameters is detected. DATA1 = parameter list				
2	HEX	4803	TRNT_INVALID_PARAMETERS	
LOCK FAILURE ( LDNT compression gate) level = EXCEPTION module = DFHLDNT This trace entry is put out if a request to LOCK the Loader state lock fails. DATA1 = parameter list				
2	HEX	4901	TRNT_LOCK_FAILURE	
UNLOCK FAILURE ( LDNT compression gate) level = EXCEPTION module = DFHLDNT This trace entry is put out if a request to UNLOCK the Loader state lock fails. DATA1 = parameter list				
2	HEX	4902	TRNT_UNLOCK_FAILURE	
DOMAIN ENTRY (LDST Statistics gate) level = 1 module = DFHLDST Generated as the first operation on entry to the domain for ST COLLECT_ STATISTICS requests. caller. DATA1 = STST Parameter list				
2	HEX	5001	TRST_ENTRY_TRACE	
DOMAIN EXIT ( LDST Statistics gate) level = 1 or EXCEPTION module = DFHLDST Generated as the final operation prior to performing return via the Kernel to the Loader's caller. DATA1 = STST Parameter list				
2	HEX	5002	TRST_EXIT_TRACE	

Len	Type	Value	Name	Description
				RECOVERY ENTERED ( LDST statistics gate) level = EXCEPTION module = DFHLDST This trace entry is put out if the active recovery routine is driven. DATA1 = parameter list DATA2 = Kernel error data
2	HEX	5701	TRST_RECOVERY_	ENTERED
				INVALID FORMAT ( LDST statistics gate) level = EXCEPTION module = DFHLDST This trace entry is put out if a call is made to the LDST gate using the incorrect parameter list format DATA1 = parameter list
2	HEX	5801	TRST_INVALID_	FORMAT
				INVALID FUNCTION ( LDST statistics gate) level = EXCEPTION module = DFHLDST This trace entry is put out if a call is made to the LDST gate specifying an invalid function. DATA1 = parameter list
2	HEX	5802	TRST_INVALID_	FUNCTION
				INVALID PARAMETERS ( LDST statistics gate) level = EXCEPTION module = DFHLDST This trace entry is put out if an invalid combination of parameters is detected. DATA1 = parameter list
2	HEX	5803	TRST_INVALID_	PARAMETERS
				LOCK FAILURE ( LDST statistics gate) level = EXCEPTION module = DFHLDST This trace entry is put out if a request to LOCK the Loader state lock fails. DATA1 = parameter list
2	HEX	5901	TRST_LOCK_	FAILURE
				UNLOCK FAILURE ( LDST statistics gate) level = EXCEPTION module = DFHLDST This trace entry is put out if a request to UNLOCK the Loader state lock fails. DATA1 = parameter list
2	HEX	5902	TRST_UNLOCK_	FAILURE
				DOMAIN ENTRY ( LDDM init/term gate) level = 1 module = DFHLDDM Generated as the first operation on entry to the domain for all calls. caller. DATA1 = Domain Manager Parameter list
2	HEX	6001	TRDM_ENTRY_	TRACE
				DOMAIN EXIT ( LDDM init/term gate) level = 1 or EXCEPTION module = DFHLDDM Generated as the final operation prior to performing return via the Kernel to the Loader's caller. DATA1 = Domain Manager Parameter list
2	HEX	6002	TRDM_EXIT_	TRACE
				PRE-SVC CALL ( LDLD functional gate) level = 2 module = DFHLDDM Generated immediately prior to issuing an SVC to invoke the Loader's authorised facilities module. DATA1 = Authorised Facility Plist < DATA2 > = BLDL Plist (BLDL or RPL load)
2	HEX	6003	TRDM_SVC_	CALL
				POST SVC-CALL ( LDLD functional gate) level = 2 module = DFHLDDM Generated on return from the Loader's SVC service routine if a normal return code has been presented by the routine. DATA1 = Authorised Facility Plist < DATA2 > = BLDL Plist (BLDL or RPL load)
2	HEX	6004	TRDM_SVC_	RETURN
				POST SVC-CALL ( LDLD functional gate) level = EXCEPTION module = DFHLDDM Generated whenever a bad return code is received from the SVC service routine which provides Loader authorised facilities. DATA1 = Authorised Facility Plist < DATA2 > = BLDL Plist (BLDL or RPL load)
2	HEX	6005	TRDM_SVC_	EXCEPTION

SET ANCHOR ( LDDM initialisation) level = EXCEPTION module = DFHLDDM These trace entries are put out if a bad response is encountered whilst defining the Loaders global storage to the Kernel. DATA1 = parameter list.				
2	HEX	6919	TRDM_SET_ANCHOR	
2	HEX	691A	TRDM_SET_ANCHOR_1	
ADD LOCK ( LDDM initialisation) level = EXCEPTION module = DFHLDDM These trace entries are put out if a bad response is encountered whilst adding one of the Loaders locks. DATA1 = parameter list.				
2	HEX	691B	TRDM_ADD_LOCK	
2	HEX	691C	TRDM_ADD_LOCK_1	
UNLOCK ( LDDM initialisation) level = EXCEPTION module = DFHLDDM These trace entries are put out if a bad response is encountered whilst UNLOCKing one of the Loader locks. DATA1 = parameter list.				
2	HEX	691D	TRDM_UNLOCK	
2	HEX	691E	TRDM_UNLOCK_1	
INQUIRE START ( LDDM pre-initialise) level = EXCEPTION module = DFHLDDM This trace entry is put out if a bad response is returned when we check whether this CICS startup is cold or not. (using INQUIRE_ START). DATA1 = DMDM parameter list. DATA2 = PAGP parameter list				
2	HEX	691F	TRDM_INQUIRE_START	
PRE-SVC CALL ( LDDM initialisation) level = 1 module = DFHLDDMI Generated immediately prior to issuing an SVC to invoke the Loader's authorised facilities module. DATA1 = Authorised Facility Plist < DATA2 > = BLDL Plist (BLDL or RPL load) Up to the first 200 characters				
2	HEX	7003	TRDMI_SVC_CALL	
POST SVC-CALL ( LDDM initialisation) level = 1 module = DFHLDDMI Generated on return from the Loader's SVC service routine if a normal return code has been presented by the routine. DATA1 = Authorised Facility Plist < DATA2 > = BLDL Plist (BLDL or RPL load) Up to the first 200 characters				
2	HEX	7004	TRDMI_SVC_RETURN	
PRE-LOAD (initialisation) level = 1 module = DFHLDDMI Generated prior to issuing a CSVQUERY call to access an LPA resident module. DATA1 = Program name				
2	HEX	7005	TRDMI_PRE_CSVQUERY	
POST LOAD (initialisation) level = 1 module = DFHLDDMI Generated after issuing a CSVQUERY call to access an LPA resident module. DATA1 = Program name DATA2 = Return code				
2	HEX	7006	TRDMI_POST_CSVQUERY	
RECOVERY ENTERED ( LDDM initialisation) level = EXCEPTION module = DFHLDDMI This trace entry is put out if the active recovery routine is driven. DATA1 = parameter list DATA2 = Kernel error data				
2	HEX	7701	TRDMI_RECOVERY_	
			ENTERED	
SVC EXCEPTION ( initialisation) level = EXCEPTION module = DFHLDDMI Generated whenever a bad return code is received from the SVC service routine which provides Loader authorised facilities. DATA1 = Authorised Facility Plist < DATA2 > = BLDL Plist (BLDL or RPL load) Up to the first 200 characters				
2	HEX	7801	TRDMI_SVC_EXCEPTION	
INVALID PDB ( LDDMI init rtne) level = EXCEPTION module = DFHLDDMI This trace entry is put out if an invalid PDB is detected. DATA1 = program name DATA2 = PDB				

Len	Type	Value	Name	Description
2	HEX	7802	TRDMI_BAD_PDB	LOAD EXCEPTION ( initialisation ) level = EXCEPTION module = DFHLDDMI Generated whenever a CSVQUERY call fails to locate a module in the LPA. DATA1 = Program name DATA1 = Return code
2	HEX	7803	TRDMI_CSVQUERY_EXCEPTION	LOAD EXCEPTION ( initialisation ) level = EXCEPTION module = DFHLDDMI Generated when a CSVQUERY call fails when attempting to locate DFHSIP. DATA1 = Program name DATA1 = Return code
2	HEX	7832	TRDMI_DFHSIP_NOT_FOUND	GET PARMS ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out if a bad response is encountered whilst requesting start-up override parameters. DATA1 = parameter list.
2	HEX	7903	TRDMI_GET_PARMS	APE GETMAIN FAILURE ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever a GETMAIN for an APE fails. DATA1 = Call Parameter list.
2	HEX	7905	TRDMI_APE_GETMAIN	WAIT PHASE ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out when the request to wait for the global catalog fails DATA1 = Call Parameter list.
2	HEX	7906	TRDMI_WAIT_PHASE	LOCAL CATALOG ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever a LOCAL catalog request fails. DATA1 = Call Parameter list.
2	HEX	7907	TRDMI_LOCAL_CATALOG	GLOBAL CATALOG ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever a GLOBAL catalog request fails. DATA1 = Call Parameter list.
2	HEX	7908	TRDMI_GLOBAL_CATALOG	DFHLDNT ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out when a problem is encountered in establishing the SMNT gate or in defining program DFHLDNT DATA1 = Call Parameter list.
2	HEX	7909	TRDMI_DFHLDNT	DFHLDST ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out when a problem is encountered in establishing the STST gate or in defining program DFHLDST DATA1 = Call Parameter list.
2	HEX	790A	TRDMI_DFHLDST	LIBRARY LOCK FAILURE ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever a LOCK request fails for the library lock. DATA1 = Call Parameter list.
2	HEX	790B	TRDMI_LIBRARY_LOCK	LIBRARY UNLOCK FAILURE ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever an UNLOCK request fails for the library lock. DATA1 = Call Parameter list.
2	HEX	790C	TRDMI_LIBRARY_UNLOCK	
2	HEX	7935	TRDMI_LIBRARY_UNLOCK_2	
2	HEX	790D	TRDMI_START_BROWSE	START BROWSE ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever a START_ BROWSE request fails. DATA1 = Call Parameter list.
2	HEX	790E	TRDMI_END_BROWSE	END BROWSE ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever an END_ BROWSE request fails. DATA1 = Call Parameter list.
2	HEX	790F	TRDMI_CPE_GETMAIN	CPE GETMAIN FAILURE ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever a GETMAIN for a CPE fails. DATA1 = Call Parameter list.
2	HEX	7910	TRDMI_BDL_GETMAIN	BLDL GETMAIN FAILURE ( LDDM initialisation ) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever a GETMAIN for a BDL plist fails. DATA1 = Call Parameter list.

Len	Type	Value	Name	Description
CSECTL GETMAIN FAILURE ( LDDM initialisation) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever a GETMAIN for a CSECTL fails. DATA1 = Call Parameter list.				
2	HEX	7912	TRDMI_CSECTL_GETMAIN	
MODE CHANGE FAILURE ( LDDM initialisation) level = EXCEPTION module = DFHLDDMI This trace entry is put out whenever a request for change of dispatch mode fails. DATA1 = Call Parameter list.				
2	HEX	7913	TRDMI_MODE_CHANGE	
INQUIRE START ( LDDM initialisation) level = EXCEPTION module = DFHLDDMI This trace entry is put out if a bad response is encountered whilst requesting value of START= SIT parameter. DATA1 = parameter list.				
2	HEX	7914	TRDMI_INQUIRE_START	
TYPE PURGE ( LDDM initialisation) level = EXCEPTION module = DFHLDDMI This trace entry is put out if a bad response is encountered whilst attempting a TYPE_ PURGE to the Catalog domain. DATA1 = parameter list.				
2	HEX	7915	TRDMI_TYPE_PURGE	
STATE LOCK ( LDDM initialisation) level = EXCEPTION module = DFHLDDMI These trace entries are put out if a bad response is encountered whilst LOCKing the Loader state lock. DATA1 = parameter list.				
2	HEX	7920	TRDMI_STATE_LOCK	
2	HEX	7921	TRDMI_STATE_LOCK_1	
2	HEX	7922	TRDMI_STATE_LOCK_2

2	HEX	792E	TRDMI_STATE_UNLOCK_8	
2	HEX	7933	TRDMI_STATE_UNLOCK_9	
ADD GATE ( LDDM initialisation) level = EXCEPTION module = DFHLDDMI These trace entries are put out if a bad response is encountered whilst adding the LDLD gate. DATA1 = parameter list.				
2	HEX	7930	TRDMI_ADD_GATE	
2	HEX	7931	TRDMI_ADD_GATE_1	
DISPATCHER CALL FAILURES ( LDDM initialisation) level = EXCEPTION module = DFHLDDMI These trace entries are put out if a bad response is returned from DSSR SUSPEND, DSSR ADD_ SUSPEND and DSSR DELETE_ SUSPEND. DATA1 = parameter list.				
2	HEX	7934	TRDMI_ADD_SUSPEND	
2	HEX	7938	TRDMI_SUSPEND_FAIL	
2	HEX	7936	TRDMI_DELETE_ SUSPEND_FAIL	
SMGF GETMAIN ( LDDM initialisation) level = EXCEPTION module = DFHLDDMI This trace entry is put out if a bad response is returned from SMGF GETMAIN when attempting to getmain a LDWE. DATA1 = parameter list.				
2	HEX	7937	TRDMI_LDWE_GETMAIN	

## LGANC      Logger domain anchor block

-

This anchor block contains the global storage for the LG domain.  
It is divided into two distinct halves, one half for DFHLGxx modules and one half for DFHL2xx modules.

(400)	CHARACTER	1024	LGA_L2_PART	
-				
This portion of the Log Manager anchor block is for the exclusive use of the DFHL2xx modules. The data is owned by DFHL2DM and is mapped by copybook DFHL2xxC.				
(400)	CHARACTER	1024	*	
--				
(800)	CHARACTER		LGA_END	

-

Stream data represents the state of a single MVS log stream.

The entire set of MVS log streams is stored as an AVL tree structure. The tree header and element leaf pointers are maintained by the BB/LX building block and are not mapped here

The stream data tree is maintained by DFHLGST but some other routines within the logger domain do modify individual stream data entries.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	56	LGSD_STREAM_DATA	
(0)	CHARACTER	26	LGSD_STREAM	MVS log stream name
(1A)	UNSIGNED	1	LGSD_SYSTEM_LOG	Is log a system log? 1=Yes, 2=No
(1B)	UNSIGNED	1	LGSD_FAILED_LOG	Has stream failed 1=Yes, 2=No
(1C)	FULLWORD	4	LGSD_USE_CT	Count of users of stream
(20)	ADDRESS	4	LGSD_STREAM_LOCK	Stream lock token
(24)	ADDRESS	4	LGSD_LOGBUF_TKN	-> Buffers etc.

Offset Hex	Type	Len	Name (Dim)	Description
(28)	CHARACTER	16	LGSD_STRUCTURE_NAME	MVS LS structure name

--  
-

The data retained for each explicitly opened general log.

A storage block table (pointed to by lga\_gd\_hdr\_ptr) contains pointers to each glog\_data entry

The glog data is processed solely by DFHLGGL

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	36	LGGD_GLOG_DATA	
(0)	ADDRESS	4	LGGD_LOG_TOKEN	Log token for this block
(4)	CHARACTER	8	LGGD_USER_TOKEN	Opener's reference
(C)	ADDRESS	4	LGGD_STREAM_TOKEN	Log stream token for MVS Logbuf token for SMF
(10)	CHARACTER	8	LGGD_JNAME	Journal name
(18)	CHARACTER	2	LGGD_COMPONENT	Component identifier
(1A)	UNSIGNED	1	LGGD_LOGTYPE	1=Mvs, 2=Smf, 3=Dummy
(1B)	CHARACTER	1	*	Reserved
(1C)	FULLWORD	4	LGGD_DOMAIN_NO	Domain opening log
(20)	FULLWORD	4	LGGD_ERROR_GATE	Gate# for error callback

--  
-

Journal Info represents the state of a single CICS user journal.

The entire set of Journals is stored as an AVL tree structure. The tree header and element leaf pointers are maintained by the BB/LX building block and are not mapped here

The journal info tree is used only by DFHLGJN.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	60	LGJI_JOURNAL_INFO	
(0)	CHARACTER	8	LGJI_JNAME	Journal name
(8)	CHARACTER	26	LGJI_STREAM	MVS log stream name
(22)	UNSIGNED	1	LGJI_LOG_TYPE	1=Mvs, 2=Smf, 3=Dummy
(23)	UNSIGNED	1	LGJI_SYSTEM_LOG	Is jnl a system log? 1=Yes, 2=No
(24)	UNSIGNED	1	LGJI_STATUS	Journal status 1=Connected 2=Disconnected 3=Disabled 5=Failed
(25)	UNSIGNED	1	LGJI_FAIL_REASON	Failure reason code (same as lgjn_reason) 6=unable_to_create_jnl 7=system_log_conflict 9=jnl_has_failed 10=error_opening_log 11=write_error
(26)	CHARACTER	2	*	
(28)	ADDRESS	4	LGJI_STREAM_TOKEN	Log stream token Logbuf token for SMF
(2C)	FULLWORD	4	LGJI_JNLWRITE_COUNT	Stats - write count
(30)	BITSTRING	8	LGJI_JNLWRITE_BYTES	- bytes total
(38)	FULLWORD	4	LGJI_JNLFLUSH_REQS	- flushes

--  
-

The data retained for each browse of a log manager resource.

A storage block table (pointed to by lga\_br\_hdr\_ptr) contains pointers to each browse\_data entry

The Browse data is used for all browses in DFHLGST, DFHLGJN, DFHLGLD

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	31	LGBR_BROWSE_DATA	
(0)	ADDRESS	4	LGBR_BROWSE_TOKEN	Token for this block
(4)	UNSIGNED	1	LGBR_TYPE	Resource type
(5)	CHARACTER	26	LGBR_KEY	Browse key
(5)	CHARACTER	8	LGBR_JNAME	Journal name
(5)	CHARACTER	8	LGBR_JMNAME	JournalModel name
(5)	CHARACTER	26	LGBR_STREAM	Stream name

--  
-

JournalModel content represents a single installed JournalModel resource.

The set of installed JournalModels are maintained on the global catalog. In storage they are maintained as a linked list.

NOTE: Templates names are stored in an internal format where values.

The JournalModel content is used only by DFHLGLD

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	52	LGJMC_JOURNALMODEL_CONTENT	
(0)	CHARACTER	8	LGJMC_JOURNALMODEL_NAME	JournalModel name
(8)	CHARACTER	8	LGJMC_JNL_TEMPLATE_X	Jnl template-extnl format
(10)	CHARACTER	8	LGJMC_JNL_TEMPLATE_I	Jnl template-intnl format
(18)	CHARACTER	26	LGJMC_STREAM_PROTO	Prototype Log stream name
(32)	UNSIGNED	1	LGJMC_LOG_TYPE	1=Mvs, 2=Smf, 3=Dummy
(33)	CHARACTER	1	*	

--  
-

The data retained for each unit of work that has written log records with the Force\_at\_sync option

The data is maintained as a simple linked list anchored in the uow\_token.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	12	LGUOW_HEADER	Work unit header
(0)	ADDRESS	4	LGUOW_CHAIN_HEAD	Chain header
(4)	CHARACTER	8	LGUOW_TIME_STAMP	Time of first log write

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	12	LGUOW_STREAM_FORCE	Streams used
(0)	ADDRESS	4	LGUOW_CHAIN_NEXT	Chain link
(4)	ADDRESS	4	LGUOW_STREAM_TOKEN	
(8)	ADDRESS	4	LGUOW_FORCE_TOKEN

## LGFL Log of logs failure record

-

The CICS log manager domain will write a record to user journal DFHLGLOG when it detects a write error to any MVS logger log stream. Records will not be written for failed attempts to connect to a log stream.

There will be one record for the stream itself and, if the stream is used as a journal, a record for each CICS journal name that uses the stream.

This record is preceded by the normal CICS log record header.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	36	LGFL_RECORD	
(0)	UNSIGNED	2	LGFL_DATA_TYPE	Record type
1=Stream Failure 2=Journal Failure

(1C)	CHARACTER	8	LGFL_JNL_NAME	Journal name

### Constants

Len	Type	Value	Name	Description
2	DECIMAL	1	LGFL_STREAM_FAIL_REC	
2	DECIMAL	2	LGFL_JNL_FAIL_REC	

## LGSF System log format

The CICS System Log is a special log where CICS keeps enough data to satisfy the requirements of transaction backout, emergency restart and indoubt resolution. It resides upon the MVS Logger. The System Log comprises a sequence of contiguous blocks on two physical log streams, the primary and the secondary. Blocks are written to the primary. They may be moved to the secondary at a later point in time so that the tail of the primary can be periodically deleted. This is a performance optimization.

Each block comprises a block header followed by a variable number of CICS records. The format of the block header is defined by the dssect "lgsl\_block\_header"

Each CICS record comprise a record header followed by caller data normally belonging to CICS Recovery Manager (RM). The record header is defined by the dssect "lgsl\_record\_header".

The format of the caller data is unknown at the Log Manager functional level. The RM caller data is defined by the Recovery Manager domain.

The following diagram shows the physical layout of a System Log block.

```

system log
__ first system log block
__ __ block header (lgsl_block_header)
__ __ __ first cics record
__ __ __ __ record header (lgsl_record_header)
__ __ __ __ caller data (RM)
__ __ __ __ next cics record
__ __ __ __ ...
__ __ __ __ last cics record
__ __ __ __ ...
__ next system log block
__ ...
__ last system log block
__ ...
    
```

This copybook defines the block header, record header, and user headers for the System Log.

Each block starts with a block header as defined here.

--  
-

Each record starts with a header as defined here, followed by RM data.

The header comprises two parts. The first part is common to all records, and contains a link to the previous record on this logstream. This enables the entire logstream to be sequentially read back on a record basis (during CICS emergency restart). This is known as the 'master chain'.

The second part identifies the different record types. There are four record types, as described below.

- A record written to the primary log as part of a UOW. Contains a link to the previous record in the UOW on the primary.

- A special fork record written to the primary log as part of a UOW. Contains a link to the previous record in the UOW on the primary (the dead tail) and the previous record in the UOW on the secondary.

- A record written to the secondary log as part of a UOW. Contains a link to the previous record in the UOW on the secondary.

- A record written to the primary log by a user and not part of any UOW (unchained).

The UOW links described above enable a UOW to be sequentially read back on a record basis (during dynamic backout). Note that the RM data starts immediately after the chain header finishes, so the RM data starts at a different offset for each different record type.

-
```

The CICS API supports writing directly to the System Log using the EXEC CICS WRITE JOURNALNAME command. This takes as input the journal type, user data and optional user prefix data. These elements are put together in dsect "cl\_user\_header" plus some extra transaction related data as shown in dsect "sl\_user\_header".

NOTE: "sl\_user\_header" followed by "cl\_user\_header" form a particular case of 'caller data' referred to above. This is the only case where caller data is not defined by RM.

The following diagram shows how the two user headers appear within a System Log record.

```
system log
__ ...
__ system log block
___ block header (lgsl_block_header)
___ first cics record
___ ...
___ next cics record
___ record header (lgsl_record_header)
___ user header (sl_user_header)
___ user header (cl_user_header)
___ rest of caller data
___ last cics record
___ ...
```

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	16	SL_USER_HEADER	
(0)	STRUCTURE	16	*	
	IsA(SYSLOGUSER)			
(0)	CHARACTER	16	SL_UH_TRAN_DATA	
(0)	UNSIGNED	4	SL_UH_TD_LENGTH	length of this header
(4)	CHARACTER	4	SL_UH_TD_TASKNO	task number
(8)	CHARACTER	4	SL_UH_TD_TRANID	tranid
(C)	CHARACTER	4	SL_UH_TD_TERMID	termid
(10)	CHARACTER		SL_UH_END	general user header follows

```
--
-
```

The CICS API supports writing directly to a user journal (which may be a General Log or the System Log) using the EXEC CICS WRITE JOURNALNAME command. This takes as input the journal type, user data and optional user prefix data. These elements are put together as shown in the dsect "cl\_user\_header".

NOTE: "cl\_user\_header" is a particular case of 'caller data' referred to above.

In this case "glrh\_rec\_compid" will be set to 'UJ'.

The following diagram shows how a user header appears within a General Log record.

```
general log
__ ...
__ general log block
___ block header (lgbh_block_header)
___ first cics record
___ ...
___ next cics record
___ record header (glrh_record_header)
___ user header (cl_user_header)
___ rest of caller data
___ last cics record
___ ...
```

NOTE: "cl\_uh\_prefix\_length" shows the number of bytes of data that is contained in the user prefix. The user prefix data, if present, immediately follows this header, which in turn is followed by the user data.

Offset Hex	Type	Len	Name (Dim)	Description

(54)	CHAR Protected	16	*	reserved

Offset Hex	Type	Len	Name (Dim)	Description
------------	------	-----	------------	-------------

--  
-

Declare Block associated types. There are types for BlockContext, BlockBuffer, and ReadCursor. Refer to DFHL2LFC for the definition of Blockid, BlockNumber and FlatBlock.

-

A BlockContext provides context information for a Block object. It is held on Block's behalf by Stream, and is passed to Block on those methods that require context information. Essentially it enables a Block object to know about the other Blocks that have been used by a given Stream.

**SHARED DATA**

**Declared Data**

(0)	CHAR Public	32	BLOCKCONTEXT	
(0)	CHAR Public	8	CURR_BLOCK_NUM	block number of last block created
(8)	CHAR Public	8	LAST_BLOCK_ID	block id of last block written to MVS
(10)	CHAR Public	8	LAST_BLOCK_TIME	creation time of last block written to MVS
(18)	UNSIGNED Public	1	*	reserved
(19)	UNSIGNED Public	1	*	reserved
(1A)	CHAR Public	6	*	reserved
(20)	CHAR Public		*	

(0)	CHAR Protected	12	BLOCKBUFFER	
(0)	ADDRESS Protected	4	START	Start of the buffer
(4)	SIGNED Protected	4	LEN	Length of the buffer
(8)	ADDRESS Protected	4	CURRENT	Current append point in the buffer
(0)	CHAR Protected	20	READCURSOR	
(0)	ADDRESS Protected	4	BLOCK_PTR	
(4)	ADDRESS Protected	4	HARD_STREAM_PTR	
(8)	CHAR Protected	8	LIMIT_BLOCK_ID

## L2BS Log manager browseable stream class

-

The BrowseableStream class declaration contains signatures for the methods, declarations of instance and class data, and implementations of the methods.

-

The BrowseableStream class is declared and is a subclass of the Stream class. Some of Stream's methods are inherited unchanged, others over-ridden and some methods are introduced specific to BrowseableStream.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	DeclareClass	728	BROWSEABLESTREAM	
<b>INSTANCE DATA</b>				
<b>Inherited Data</b>				
(0)	CHAR Private	4	*	

Offset Hex	Type	Len	Name (Dim)	Description
-				
An instance of Stream class consists of:				
- An eyecatcher.				
- A double chain link to other streams in the chain of all streams.				
- A stream lock which is used to manage concurrent requests made against the stream. Note that a Stream method requiring both the stream lock and the domain lock should acquire the stream lock first to prevent possible deadlock.				
- Two block-oriented data structures called StreamBlocks used for managing writes and deferred writes. At any given time one is for the Current block and the other is for the Previous block.				
- Pointers to the two StreamBlocks above. One identifies the Current, the other identifies the Previous.				
- The ForceToken currently associated with this stream. This is updated on every buffer switch.				
- The activity keypoint frequency of the stream, set to zero if activity keypoints do not apply, and an associated count which is used to monitor when activity keypoints are to be triggered.				
- Some context data which is owned by the Block class, and is passed to those Block methods that require it.				
- The HardStream object that is associated with this stream.				
- Whether the stream is an MVS Logger log or an SMF log.				
- The logstream name. This is for MVS Logger logs only.				
- The journal name. This is a real journal name for SMF logs, or is fabricated from the last qualifier of the logstream name for MVS Logger logs.				
- Whether the stream is for a System Log or General Log.				
- Some flags indicating progress through the initialization of a Stream object.				
- A flag indicating whether the deferred flush mechanism is active for the stream.				
- Various statistics for monitoring the number of tasks forced to wait while writing to the stream.

If set to no the data is deleted when it matures beyond the retention period and an IXGDELETE call has been issued.</p> <ul style="list-style-type: none"> <li>- A maximum block size.</li> </ul> <p>This is a constant, being the maximum block size allowed for the MVS System Logger log stream or MVS SMF log.</p> <ul style="list-style-type: none"> <li>- An MVS log stream token.</li> </ul> <p>This is the token that denotes the MVS Logger log stream at its interface. The MVS System Logger returns this value on the connect operation.</p> <ul style="list-style-type: none"> <li>- A buffer pointer.</li> </ul> <p>This is the address of the buffer to be written. It is kept here because of the possibility of the need to retry later due to a recoverable error returned from MVS Logger.</p> <ul style="list-style-type: none"> <li>- A buffer length.</li> </ul> <p>This is the length of the buffer to be written. It is kept here because of the possibility of the need to retry later due to a recoverable error returned from MVS Logger.</p>

Offset Hex	Type	Len	Name (Dim)	Description
				- An ECB.  This is the ECB used when writing to the MVS Logger log stream or MVS SMF log.
				- A write answer area.  This is the area where the MVS Logger returns its asynchronous response and diagnostic data.
				- A block id.  This is the area where the MVS Logger returns the block id of the block just written.
				- A block timestamp.  This is the area where the MVS System Logger returns timestamp of the block just written.
				- Warning received indicator.  Set to 'Y' on receipt of a warning exception from the MVS Logger. Reset to 'N' on the first 'ok' response following the warning. Used to limit the number of times a warning message is issued.
				- Broken log indicator.  Set to 'Y' on receipt of an unrecoverable error from the MVS Logger. Maintains this state until the log is disconnected. Subsequent calls to a broken log will receive the same response as the original failure, which are kept in the broken response and reason fields.
				- Broken response.
				- Broken reason.
				- SMF response.  This field is the internal response of an SMF write.
				- SMF reason.  This field is the internal reason of an SMF write.
				- Various statistics.  These are the stats fields that HardStream supports, which are incremented when appropriate and reported/reset on request. For SMF type log streams all stats fields are not used.
				- ixg_stck  This is set to the current STCK value just before calling the MVS logger. This is used by the heartbeat task to determine whether it is appropriate to 'touch' the MVS logger.
				- ixgwrite_stck  This is set to the current STCK value just before calling the MVS logger macro IXGWRITE. This is used to evaluate the IXGWRITE latency.
				- ixgwrite_latency  This is set to the time it took to execute the last IXGWRITE call. If the call is made SYNChronously then this is simply the time taken to execute the call and return. If the call is made ASYNChronously then this includes the initial plus the wait period to the posting of the ECB. This is used to cap the LG defer period. This is measured in milliseconds.

In addition to the instance data inherited from the Stream class, instances of the BrowseableStream class consist of:

- an eyecatcher,
- a double chain link to other browseable streams in the chain of all browseable streams,
- a record token pointing to the head of the master chain of records,
- a record token pointing to the next record to be read as part of a master chain browse of records on this browseable stream.
- some flags indicating progress through the initialisation of a browseable stream object,
- some flags set aside for general use,
- some space reserved for future use.

## L2CH Log manager chain class

-

The L2CH Class declaration contains the signatures for the methods, the declaration of the instance and class data, and the implementations of the internal, inlineable methods.

The copybook protects itself against multiple inclusion.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	DeclareClass	248	CHAIN	
<b>INSTANCE DATA</b>				
<b>Inherited Data</b>				
(0)	CHAR Private	4	*	

Offset Hex	Type	Len	Name (Dim)	Description
An instance of Chain class consists of:				
- an eyecatcher,				
- a link allowing the instance to be collected into the global list of chains,				
- a link allowing the instance to be placed on a free list of chains,				
- a record token object referring to the last record written to the chain (the 'head' of the chain).				
- the log stream token of the primary system log stream,				
- primary and secondary system log stream history points,				
- a lock manager lock to enable access to the chain to be serialised,				
- flags: whether or not the instance is on the free chain, whether or not the chain is active (an inactive chain exists just to assist the backwards scan of the log during system restart), whether or not the primary log is a dummy, and whether or not a chain browse is processing the secondary log,				
- a record token referring to the next record to be read by a chain browse,				
- read tokens for primary and secondary log stream browses which are used to browse the chain,				
- reserved space to be used for APAR fixes etc. which want to avoid causing large numbers of recompilations.				
NOTE: All the instances of chain are kept on the global list of chains. Those that are on the free chain are flagged so that their 'allocated' bit is zero. This avoids the overhead of adding and removing chains from the global list during typical create() and destroy() method calls. A consequence is that unallocated chains must be skipped in all browses of the global list.

**L2HP Log manager history point class**

What follows defines the Log Manager HistoryPoint class.

History points provide a means of remembering the age of records written to logs. They are used by the System Log class and the Chain class, so are only of relevance to the system log.

The history point of a log record consists of the store clock value that was stored in the record when it was written to the buffer together with a block id, where the block id is not later than the block containing the record.

The history points of a chain are the history points of the oldest records on the primary and secondary log streams belonging to the live part of the chain. If there is no oldest record on either log stream the corresponding history point is in the 'ultimate future' (the latest possible history point).

If the oldest block id is unknown then the history point is in the 'ultimate past' (the oldest possible history point). This occurs, for example, during browse all when the first record of the chain has not yet been browsed, or on a very early write to a log stream after a cold start.

The current history point of a log stream is the history point of the most recently written record on that log stream. If the most recently written record is unknown, then the history point is in the ultimate past. An empty log stream is an example of this.

The HistoryPoint class has instance data but no class data.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	DeclareClass	24	HISTORYPOINT	

An instance of the HistoryPoint class consists of a store clock value, a block id, and a history point type.

There are three different history point types:

- Ultimate past. This is the earliest possible history point, and has a low values store clock and a null block id.

- Normal. This is a history point strictly between ultimate past and ultimate future, and has a real store clock and a real block id.

- Ultimate future. This is the latest possible history point, and has a high values store clock and a null block id.

## L2HS Log manager hard stream class

-

The HardStream Class declaration contains the signatures for the methods, the declaration of the instance data, and the implementations of the internal methods.

This class provides the following operations, all of which operate on a single object of the HardStream class:-

- Connect

Connect to the MVS Logger or SMF logstream and initialize the HardStream object.

- Disconnect

Disconnect from the logstream and destroy the HardStream object.

- Delete\_all

Delete all blocks of data from the logstream (MVS Logger only).

- Delete\_history

Delete all blocks of data from the logstream that are strictly older than a specified block (MVS Logger only).

- Get\_block\_size

Returns the maximum block size allowed for the logstream.

- Get\_current\_block

Returns the block id and block of the youngest block on the logstream (MVS Logger only).

- Start\_read

Start a browse in order to read blocks back from the logstream (MVS Logger only).

- Read\_block

Read a specified block from the logstream (MVS Logger only).

- End\_read

End a browse.

- Start\_write

Write a block of data to the logstream without waiting for the result. A subsequent wait\_write operation is used to obtain the result.

- Wait\_write

Obtain the result of a previously issued write of a block of data, waiting for the write to complete if necessary.

- Collect\_statistics

Return statistics data for the logstream (MVS Logger only).

- Reset\_statistics

Reset statistics data for the logstream (MVS Logger only).

Offset	Type	Len	Name (Dim)	Description
Hex				
(0)	DeclareClass	280	HARDSTREAM	
<b>INSTANCE DATA</b>				
<b>Inherited Data</b>				
(0)	CHAR Private	4	*	

An instance of HardStream class consists of

- An eyecatcher.

This helps dump navigation.

- A log stream name.

This is the log stream name which denotes the MVS System Logger log stream on connect operation, which returns a stream token.

- A journal name.

This is the journal name from the log stream name, used as the resource name when a task is suspended.

- A log type.

This is either 'mvs' or 'smf'.

- A connected/disconnected indicator.

When 'connected' the HardStream object is operational, and when 'disconnected' it has been disconnected and it about to be destroyed.

- A System Log indicator.

If 'Y' the log stream forms part of the System Log.

- dasd\_only(y/n)

This flag indicates whether the log stream is of type DASDONLY or CF based.

- structname

If the log stream is CF based, this is the structure name used by the log stream, otherwise this is set to binary 0 (meaning not applicable).

- retention\_period

The log stream retention period is the number in days that the data must be kept before it can be physically deleted by the MVS logger.

- auto\_delete

Auto delete flag, if set to yes the MVS logger automatically deletes the data as it matures beyond the retention period, irrespective of any IXGDELETE calls. If set to no the data is deleted when it matures beyond the retention period and an IXGDELETE call has been issued.

- A maximum block size.

This is a constant, being the maximum block size allowed for the MVS System Logger log stream or MVS SMF log.

- An MVS log stream token.

This is the token that denotes the MVS Logger log stream at its interface. The MVS System Logger returns this value on the connect operation.

- A buffer pointer.

This is the address of the buffer to be written. It is kept here because of the possibility of the need to retry later due to a recoverable error returned from MVS Logger.

- A buffer length.

This is the length of the buffer to be written. It is kept here because of the possibility of the need to retry later due to a recoverable error returned from MVS Logger.

Offset Hex	Type	Len	Name (Dim)	Description
				- An ECB.  This is the ECB used when writing to the MVS Logger log stream or MVS SMF log.
				- A write answer area.  This is the area where the MVS Logger returns its asynchronous response and diagnostic data.
				- A block id.  This is the area where the MVS Logger returns the block id of the block just written.
				- A block timestamp.  This is the area where the MVS System Logger returns timestamp of the block just written.
				- Warning received indicator.  Set to 'Y' on receipt of a warning exception from the MVS Logger. Reset to 'N' on the first 'ok' response following the warning. Used to limit the number of times a warning message is issued.
				- Broken log indicator.  Set to 'Y' on receipt of an unrecoverable error from the MVS Logger. Maintains this state until the log is disconnected. Subsequent calls to a broken log will receive the same response as the original failure, which are kept in the broken response and reason fields.
				- Broken response.
				- Broken reason.
				- SMF response.  This field is the internal response of an SMF write.
				- SMF reason.  This field is the internal reason of an SMF write.
				- Various statistics.  These are the stats fields that HardStream supports, which are incremented when appropriate and reported/reset on request. For SMF type log streams all stats fields are not used.
				- ixg_stck  This is set to the current STCK value just before calling the MVS logger. This is used by the heartbeat task to determine whether it is appropriate to 'touch' the MVS logger.
				- ixgwrite_stck  This is set to the current STCK value just before calling the MVS logger macro IXGWRITE. This is used to evaluate the IXGWRITE latency.
				- ixgwrite_latency  This is set to the time it took to execute the last IXGWRITE call. If the call is made SYNCronously then this is simply the time taken to execute the call and return. If the call is made ASYNCronously then this includes the initial plus the wait period to the posting of the ECB. This is used to cap the LG defer period. This is measured in milliseconds.

## L2LF Log manager log formats

-

What follows declares the types that are used when building log blocks and records, and any associated constants.

A block is the unit by which data is written to and read from a logstream. Each block comprises a block header followed by a number of records. Each record comprises a record header followed by caller data. Records on the system log additionally contain links to other records on the logstream. The links are known as chain headers.

There are type declarations for block headers, record headers, chain headers, and the flattened form of a record token, plus the simple types that comprise them.

## L2LT Log manager lock tracker class

What follows defines the Log Manager LockTracker class.

Several Log Manager objects contain a lock. Such objects are Chains, Streams and Domain Manager. Under certain circumstances, notably when its recovery routine has been driven, a module that uses such an object needs to know whether a method it called has acquired the lock. This is so the lock can be released. It is therefore necessary to track the status of the lock. This requires knowing both the address of the object and whether the lock is held or not.

This is achieved by declaring a LockTracker variable for each object lock the module is interested in. Each LockTracker must be explicitly initialised by the module using the I2lt\_set\_free method. Whenever the lock is acquired or released the LockTracker is automatically updated by the object using the I2lt\_set\_held and I2lt\_set\_free methods. If the module recovery routine is driven it must call the lock\_release method of the object. This uses the I2lt\_inq\_status and I2lt\_inq\_token methods, and will only release the lock if the LockTracker indicates the lock is held.

Only one Chain lock, one Stream lock and the Domain Manager lock may be tracked within a given module. This is because a LockTracker is not passed as a parameter to Stream or Chain.

The LockTracker class has instance data but no class data.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	DeclareClass	8	LOCKTRACKER	

An instance of the LockTracker class consists of a token to identify the object in question, plus the status of the lock.

### INSTANCE DATA

Declared Data

(5)	CHAR Protected	3	*	reserved

## L2RT Log manager record token class

What follows defines the Log Manager RecordToken class.

A RecordToken provides a means of identifying the location of a log record that is being written to or read from a logstream. It consists of a pointer to the Block object for the block containing the record, and an index which gives the offset of the record within that block.

A 'flattened' form of a RecordToken is also required, so that the information contained within a RecordToken may be stored in log records, and later unflattened when the record is read back. The FlatRecordToken is defined with the log formats in DFHL2LFC.

Whenever a RecordToken is created (by building, copying or unflattening) we immediately register interest in it. This holds the Block, and means that the Block can not disappear from under our caller's feet. When our caller has finished with the RecordToken he must deregister interest, and we will release the hold on the Block. Releasing the last hold destroys the Block.

The RecordToken class has instance data but no class data.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	DeclareClass	24	RECORDTOKEN	
<b>INSTANCE DATA</b>				
<b>Inherited Data</b>				
(0)	CHAR Private	4	*	

An instance of the RecordToken class consists of a pointer to the associated Block object, and an index which is the offset of the record within that block. Note that the largest size block that MVS allows is 64K bytes.

A null RecordToken has no underlying Block and so has a null pointer and an index of zero.

<b>Declared Data</b>				
(8)	CHAR Protected	10	INSTANCE_ DATA_BLOCK	
(8)	ADDRESS Protected	4	BLOCK_PTR	pointer to Block object
(C)	UNSIGNED Protected	4	INDEX	offset within block
(10)	CHAR Protected	2	*	reserved

## L2SL Log manager system log class

What follows defines the Log Manager SystemLog class.

The CICS system log consists of two MVS Logger logstreams, the primary (journal name DFHLOG) and the secondary (journal name DFHSHUNT). The SystemLog class knows which log stream objects are used for these (that is, which instances of the BrowseableStream class). It is responsible for opening the log streams at CICS startup, and for deleting all records from the log streams when CICS is cold started. It provides inquiry methods so other classes can obtain the tokens (actually BrLogStreamTokens) for the primary and secondary streams.

It is possible for the user to define the primary and/or secondary stream as a dummy stream. If the primary is a dummy then this implies that the secondary is also a dummy (it does not make sense otherwise). A special dummy BrLogStreamToken is used to indicate that a stream is a dummy, and is returned by the inquiry method. It is the inquirer that decides upon the appropriate action to take.

The SystemLog class owns the activity keypoint frequency (AKPFREQ). It provides methods for inquiring and setting its value. It also passes on the value of the activity keypoint frequency to the primary stream object. The activity keypoint frequency can be set at CICS startup and using the CICS API. If it is set at CICS startup and if the primary stream has not yet been opened, the call to the primary stream object is deferred until the open takes place.

The SystemLog class must be notified of any failures that occur when writing critical data to or reading critical data from the primary or secondary stream. This normally results in a termination of CICS.

The SystemLog class has no instance data as there are no instances of this class. All data is stored in class data and is accessed by class methods. It has both internal and external methods.

Offset	Type	Len	Name (Dim)	Description
Hex				
(0)	DeclareClass	4	SYSTEMLOG	
<b>INSTANCE DATA</b>				
<b>Inherited Data</b>				
(0)	CHAR Private	4	*	

The SystemLog class data consists of the tokens for the primary and secondary streams, the activity keypoint frequency, the inhibit delete indicator, some deferred event indicators used when opening and deleting all records from the secondary stream and when passing on the activity keypoint frequency, and a flag that is set to indicate CICS is quiescing due to a lost data failure.

The BrLogStreamToken for each stream can take one of the following values:

- Null - the stream has not been opened
- Dummy - the stream is defined as a dummy
- A real BrLogStreamToken - the stream is real and was successfully opened

## L2SR Log manager stream class

What follows defines the Log Manager Stream class.

A Stream object provides the ability to write data records to and read data records from an MVS Logger or SMF logstream. It provides a layer between the logstream user and the code that actually calls MVS. This layer is necessary to hide the details involved with writing to and reading from logstreams. In particular, it provides a record-level interface for the logstream user, and it hides various performance related techniques such as double buffering and deferred force of buffers.

A logstream may be viewed as consisting of a number of blocks. These are the units by which data is written to the physical medium. A logstream will typically comprise a number of such blocks on the physical medium (referred to as +hard+), plus two buffers called +Current+ and +Previous+ which provide the double buffering when writing data (referred to as +soft+), plus possibly some +Read+ buffers used when reading blocks back from the logstream.

A Block object represents an individual block on the hard stream or a buffer. A Stream object therefore cooperates with several Block objects when writing and reading data. However a Block is not independent of the Stream that it belongs to. A Block object requires some context information, primarily to implement its block numbering scheme. This context data is owned by Block, is held as part of a Stream object, and is passed to Block methods where appropriate.

A General Log logstream is represented by a Stream object. However, a System Log logstream is more complex and is represented by a BrowseableStream object. The BrowseableStream class inherits from the Stream class, and so has all the properties of Stream declared here.

The Stream class has both instance and class data. It has both internal and external methods.

Offset	Type	Len	Name (Dim)	Description
Hex				
(0)	DeclareClass	608	STREAM	
<b>INSTANCE DATA</b>				
<b>Inherited Data</b>				
(0)	CHAR Private	4	*	

Offset Hex	Type	Len	Name (Dim)	Description
-				
An instance of Stream class consists of:				
- An eyecatcher.				
- A double chain link to other streams in the chain of all streams.				
- A stream lock which is used to manage concurrent requests made against the stream. Note that a Stream method requiring both the stream lock and the domain lock should acquire the stream lock first to prevent possible deadlock.				
- Two block-oriented data structures called StreamBlocks used for managing writes and deferred writes. At any given time one is for the Current block and the other is for the Previous block.				
- Pointers to the two StreamBlocks above. One identifies the Current, the other identifies the Previous.				
- The ForceToken currently associated with this stream. This is updated on every buffer switch.				
- The activity keypoint frequency of the stream, set to zero if activity keypoints do not apply, and an associated count which is used to monitor when activity keypoints are to be triggered.				
- Some context data which is owned by the Block class, and is passed to those Block methods that require it.				
- The HardStream object that is associated with this stream.				
- Whether the stream is an MVS Logger log or an SMF log.				
- The logstream name. This is for MVS Logger logs only.				
- The journal name. This is a real journal name for SMF logs, or is fabricated from the last qualifier of the logstream name for MVS Logger logs.				
- Whether the stream is for a System Log or General Log.				
- Some flags indicating progress through the initialization of a Stream object.				
- A flag indicating whether the deferred flush mechanism is active for the stream.				
- Various statistics for monitoring the number of tasks forced to wait while writing to the stream.

Offset Hex	Type	Len	Name (Dim)	Description
				- An ECB.  This is the ECB used when writing to the MVS Logger log stream or MVS SMF log.
				- A write answer area.  This is the area where the MVS Logger returns its asynchronous response and diagnostic data.
				- A block id.  This is the area where the MVS Logger returns the block id of the block just written.
				- A block timestamp.  This is the area where the MVS System Logger returns timestamp of the block just written.
				- Warning received indicator.  Set to 'Y' on receipt of a warning exception from the MVS Logger. Reset to 'N' on the first 'ok' response following the warning. Used to limit the number of times a warning message is issued.
				- Broken log indicator.  Set to 'Y' on receipt of an unrecoverable error from the MVS Logger. Maintains this state until the log is disconnected. Subsequent calls to a broken log will receive the same response as the original failure, which are kept in the broken response and reason fields.
				- Broken response.
				- Broken reason.
				- SMF response.  This field is the internal response of an SMF write.
				- SMF reason.  This field is the internal reason of an SMF write.
				- Various statistics.  These are the stats fields that HardStream supports, which are incremented when appropriate and reported/reset on request. For SMF type log streams all stats fields are not used.
				- ixg_stck  This is set to the current STCK value just before calling the MVS logger. This is used by the heartbeat task to determine whether it is appropriate to 'touch' the MVS logger.
				- ixgwrite_stck  This is set to the current STCK value just before calling the MVS logger macro IXGWRITE. This is used to evaluate the IXGWRITE latency.
				- ixgwrite_latency  This is set to the time it took to execute the last IXGWRITE call. If the call is made SYNCronously then this is simply the time taken to execute the call and return. If the call is made ASYNCronously then this includes the initial plus the wait period to the posting of the ECB. This is used to cap the LG defer period. This is measured in milliseconds.

--  
-

The Stream class data consists of

- An eyecatcher.
- The anchor of a doubly-linked list of all Streams.
- An object factory instance used to allocate Stream objects.
- The current value of the deferred flush interval.

**SHARED DATA**

**Declared Data**

(0)	CHAR Protected	128	CLASSDATABLOCK

Declare Stream associated types. There is a type for the token by which a Stream may be referred to, for the Stream view of a Block, for the state that this view may be in, and for an element used to identify a task that suspends while writing to Current or forcing Current or Previous.

(0)	ADDRESS Public	4	LOGSTREAMTOKEN	
(0)	FIXED Protected	1	BLOCKSTATUS	

Stream has its own view of a Block and the state it is in. Each Stream object contains two of these. At any given time, one will be for Current and the other will be for Previous. Each such StreamBlock contains:

- A pointer to the actual corresponding Block object.
- The current state of the block, which is used to manage the deferred force, write and wait protocols.
- The ForceToken associated with the block. Stream also uses this to uniquely identify the block. It will be zero if no records have yet been appended.
- When the block is in +flushed+ state, the pointer to the new Block object to be used as the new Current when the next buffer switch occurs.
- The nominal owner of the block. This is set when deferring the force of the Current block or waiting for the Previous block to harden, and is the transaction number of the task performing the action. It is only for debugging purposes.
- A queue of tasks which are suspended waiting for a force or write to complete for the block.

(0)	CHAR Protected	64	STREAMBLOCK

Offset Hex	Type	Len	Name (Dim)	Description
--				
				Declare a type for an element used to identify a task that suspends while writing to Current or forcing Current or Previous. This contains:
				- A link to other such elements in a chain.
				- The default suspend token for the task.
				- The owner of this element, ie, the suspending task.
				- The state of the associated block when the task suspended.
				- The ForceToken of the associated block when the task suspended, enabling the task to see if the block was forced while it was suspended.
				- A flag indicating if the task has been resumed and dechained, used to implement Dispatcher protocol.

**MEMMS Message table definition**

MODULE NAME = DFHMEMMS COPY  
 DESCRIPTIVE NAME = CICS MESSAGE DOMAIN - STRUCTURE OF DATA  
 IN MESSAGE DEFINITION MODULE (DFHMET)  
 to be generated

FUNCTION= This member describes the structure of data contained  
 in the Message Definition Table (DFHMET). It provides  
 symbolic access to the message templates, together  
 with the globals in storage created by message domain  
 initialisation.  
 (a) The Message Domain (DFHME<sub>x</sub>)  
 (b) Message Module CMS Utility (DFHMEU) to build  
 the message module from CMS Source data in DFHMET.

**Module Header**

FUNCTION= This member describes the structure of data contained  
 in the Message Definition Table (DFHMET). It provides  
 symbolic access to the message templates, together  
 with the globals in storage created by message domain  
 initialisation.

EXTERNAL REFERENCES = None
DATA AREAS = None
CONTROL BLOCKS = None
GLOBAL VARIABLES (Macro pass) = None
Monitor Authorised Facilities Parm Block -- M A F P B --
The Monitor Authorised Facilities Parameter Block contains:
    The authorised facility function code.
    The function return code.
    The SMF record address
    The SYSEVENT record address
    The MVS Workload Manager fields
    The creation time of the MAFPB
    
```

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	68	MAFPB	
Prefix fields for restructured control blocks				
(0)	CHARACTER	16	MAFPB_PREFIX	
(0)	UNSIGNED	2	MAFPB_LENGTH	
(2)	CHARACTER	1	MAFPB_ARROW	
(3)	CHARACTER	3	MAFPB_DFH	
(6)	CHARACTER	2	MAFPB_DOMAIN	
(8)	CHARACTER	8	MAFPB_BLOCK_ID	
Function the Monitoring authorised module should perform, ie SMF write, or MVS SRM notify				
(10)	UNSIGNED	2	MAFPB_FUNCTION	
Monitoring authorised module return code. It is not the SMF or SYSEVENT return code. If this is set to MAFPB_SYSEVENT_ERROR or MAFPB_SMF_ERROR, the respective return code is in MAFPB_SYSEVENT_RC or MAFPB_SMF_RC.				
(12)	UNSIGNED	1	MAFPB_RESPONSE	
Indicator to Monitoring authorised module whether to perform GTF tracing.				
(13)	BITSTRING	1	* MAFPB_GTF_TRACE_FLAG *	
Address of SMF record if SMF write is required.				
(14)	ADDRESS	4	MAFPB_SMF_RECORD	
Address of SYSEVENT record if MVS SRM notification is required.				
(18)	ADDRESS	4	MAFPB_SYSEVENT_RECORD	
SMF and SYSEVENT return codes				
(1C)	UNSIGNED	1	MAFPB_SMF_RC	
(1D)	UNSIGNED	1	MAFPB_SYSEVENT_RC	
(1E)	UNSIGNED	2	*	
MVS Return Code registers after SYSEVENT or SMFEWTM macros have been issued.				
(20)	FULLWORD	4	MAFPB_RTNREG0	
(24)	FULLWORD	4	MAFPB_RTNREG1	
(28)	FULLWORD	4	MAFPB_RTNREG15	

Offset Hex	Type	Len	Name (Dim)	Description
MVS Workload Manager Connect Token, Performance Block Token, and the Transaction End Time for Report or Notify.				
(2C)	UNSIGNED	4	MAFPB_WLM_CONNECT_TOKEN	
(30)	UNSIGNED	4	MAFPB_WLM_PERFORMANCE_BLOCK	
(34)	BITSTRING	8	MAFPB_WLM_TRAN_END_TIME	
STCK timestamp of either the MAFPB creation time, or the last time a record was written to SMF, or passed to the MVS SRM (SYSEVENT).				
(3C)	CHARACTER	8	MAFPB_CREATION_STCK	
(44)	CHARACTER		*	

## Constants

Len	Type	Value	Name	Description
2	DECIMAL	1	MAFPB_SMFEWTM

## MNCBS Monitoring domain control blocks

CONTROL BLOCK NAME = DFHMNCBS  
 DESCRIPTIVE NAME = CICS/MVS Monitoring (MN) Domain  
 Control Block declarations.

Function =  
 This file contains the control block and constant declarations used by the Monitoring domain.  
 The file is included by each Monitoring domain module.  
 The control blocks are:  
 TMA - Transaction Monitoring Area.  
 GLOBAL - Monitoring global storage area.  
     - Dictionary Entry.  
     - Connector Arrays.  
 DUMP - Dump control values.  
 MSGS - Message Numbers.  
 TRACE - Trace point definitions.

Each control block declaration is followed by the constant declarations related to it.

## NQB Enqueue domain browse element

-

NQ domain browse element (NQB)

This control block represents a single enqueue browse. One of these control blocks exists for each enqueue browse that is in progress.

NQBs are chained together in a singularly linked list. The head of the list is in the NQA (anchor block).

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	*	NQB	
(0)	CHARACTER	84	NQB_PREFIX	
(0)	UNSIGNED	2	NQB_LENGTH	Control block length
(2)	CHARACTER	14	NQB_EYECATCHER	>DFHNQBROWSE
(10)	ADDRESS	4	NQB_NEXT_BROWSE_ELEMENT	Next browse element
(14)	ADDRESS	4	NQB_RMWT_BROWSE_TOKEN	Browse token of underlying RMWT browse
(18)	BITSTRING	1	NQB_FLAGS	
			NQB_STABLE_ENQUEUES	Stable enqueues specified
			NQB_ENQSCOPE	Enqscope specified
(19)	CHARACTER	1	*	Reserved
(1A)	UNSIGNED	2	NQB_NAME_LENGTH	Length of name filter
(1C)	CHARACTER	4	NQB_SCOPE_FILTER	Enqscope filter
(20)	CHARACTER	8	NQB_UOWID_FILTER	Local uowid if browse filtered or nulls if not
(28)	CHARACTER	8	NQB_CURRENT_UOWID	Local uowid of current UOW in RMWT browse
(30)	ADDRESS	4	NQB_CURRENT_UOW_TOKEN	UOW token of current UOW in RMWT browse
(34)	ADDRESS	4	NQB_OWNER_EXTENSION	Address of owner history extension for current UOW
(38)	ADDRESS	4	NQB_WAITER_EXTENSION	Address of waiter history extension
(3C)	ADDRESS	4	NQB_CURRENT_ENQUEUE_OWNER	UOW token of current enqueue being returned
(40)	ADDRESS	4	NQB_STABLE_NQEA	Last enq returned by STABLE_ENQUEUES browse
(44)	CHARACTER	4	NQB_BROWSING_TRANID	Transaction id of txn performing the browse
(48)	CHARACTER	4	NQB_BROWSING_TRANNUM	Transaction number of txn performing the browse
(4C)	CHARACTER	8	NQB_BROWSING_TXN_TOKEN	Transaction token of txn performing the browse
(58)	CHARACTER	*	NQB_NAME_FILTER	Name filter

## NQEA Enqueue domain queue element area

### Queue Element Area (NQEA)

A single NQEA is used to represent each resource that is currently enqueued upon. Tasks waiting to gain control of a resource are also represented by an NQEA. A flag indicates whether the NQEA represents the resource owner or a task that is waiting for that resource.

Another flag indicates the scope (region or sysplex) of the enqueue.

Both owning and waiting NQEAs are chained from the 'NQ' work token in the UOW associated with them. Owning NQEAs are chained from the hash table in the NQPL (Enqueue Pool) that the resource belongs to. Waiting NQEAs are chained from the owning NQEA in FIFO order.

NQEAs that aren't in use are placed on a free chain anchored from their associated NQPL.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	*	NQEA	
(0)	CHARACTER	4	NQEA_PREFIX	
(0)	CHARACTER	4	NQEA_EYECATCHER	NQEA
(4)	CHARACTER	4	*	Overlaid fields
(4)	ADDRESS	4	NQEA_UOW_NEXT	Pointer to next NQEA owned or being waited on by UOW
(4)	ADDRESS	4	NQEA_NEXT_FREE	Next NQEA if on free chain
(8)	ADDRESS	4	NQEA_HASH_PREV	Previous NQEA on hash collision chain
(C)	ADDRESS	4	NQEA_HASH_NEXT	Next NQEA on hash collision chain
(10)	CHARACTER	16	NQEA_CLEARED_FIELDS	Fields to cleared
(10)	ADDRESS	4	NQEA_NEXT_WAITER	Chain of NQEAs waiting for this resource. Head of chain is the current owner
(14)	BITSTRING	1	NQEA_CLEARED_FLAGS1	Various flags

(40)	CHARACTER	8	NQEA_WAIT_START_TIME	Time enqueue wait started if waiting
(40)	CHARACTER	8	NQEA_RETAINED_START_TIME	Time enqueue went into retained state if retained
(48)	ADDRESS	4	NQEA_POOL_POINTER	NQPL that NQEA belongs to
(4C)	FULLWORD	4	NQEA_NAME2_LENGTH	Length of enqueue_name2 parameter if supplied
(50)	CHARACTER	4	NQEA_ENQSCOPE	MVS enqscope name
(54)	CHARACTER	4	NQEA_SYSEQ_ECB	ECB used for ENQ macro@L1A
(58)	CHARACTER	4	NQEA_HASHMARK	Word which precedes name
(58)	FULLWORD	4	NQEA_NAME_LENGTH	Length of enqueue name
(5C)	CHARACTER	*	NQEA_NAME	Start of Enqueue name

### Constants

Len	Type	Value	Name	Description
4	DECIMAL	92	NQEA_FIXED_LENGTH	

## NQOX Enqueue domain browse owner extension

NQ domain browse owner extension (NQOX)

This variable length vector is used to maintain a history of the enqueues names returned so far in the browse.

The start of the vector is used to store some names permanently for the duration of the browse.

After the permanent records are names that are stored temporarily for the current UOW in the browse.

The NQOX is addressed from the NQB (browse element) of the browse it relates to.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	*	NQOX	
(0)	CHARACTER	16	NQOX_PREFIX	
(0)	FULLWORD	4	NQOX_LENGTH	Control block length
(4)	CHARACTER	12	NQOX_EYECATCHER	>DFHNQOWNERX
(10)	ADDRESS	4	NQOX_SPARE_ NAME_STG_PTR	Address of spare name block storage
(14)	FULLWORD	4	NQOX_SPARE_ NAME_STG_LEN	Length of spare name block storage
(18)	FULLWORD	4	NQOX_MAXIMUM_ SLOTS	Number of slots in this extension
(1C)	FULLWORD	4	NQOX_TEMP_ SLOTS_USED	Number of temporary slots currently in use
(20)	FULLWORD	4	NQOX_PERM_ SLOTS_USED	Number of permanent slots in use for enqueues whose owner changed mid browse
(24)	CHARACTER	4	*	Reserved
(28)	CHARACTER	16	NQOX_OWNER_SLOT (*)	
(28)	ADDRESS	4	NQOX_ENQUEUE_ OWNER	UOW token of enqueue owner
(2C)	ADDRESS	4	NQOX_ENQUEUE_ POOL	Addr of enqueue pool
(30)	FULLWORD	4	NQOX_ENQUEUE_ NAME_LEN	Length of enqueue name
(34)	ADDRESS	4	NQOX_ENQUEUE_ NAME_PTR	Addr of enqueue name copy

### Constants

Len	Type	Value	Name	Description
4	DECIMAL	16	NQOX_DEFAULT_ MAX_SLOTS	

## NQPL Enqueue domain enqueue pool

### Enqueue Pool control block (NQPL)

This control block represents a single enqueue pool. One of these control blocks exists for each enqueue pool that is created.

NQPL\_SYSPLEX\_SCOPE has been added to record the scope of enqueues in this pool.

NQPLs are chained together in a singularly linked list. The chain is ordered alphabetically by pool name. The head of the list is in the NQA.

For performance reasons the NQPL is divided into three separate sections. Ensure that new fields are added to the correct section of the control block.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	384	NQPL	
(0)	CHARACTER	64	NQPL_SECTION_1	Performance sensitive
(0)	CHARACTER	4	NQPL_PREFIX

(42)	CHARACTER	*	*	

PLCB - PG Program Level Control Block.  
 This block contains the PG domain storage for a logical level within a transaction.  
 ALLOCATED : as part of link to a logical level. There is no explicit GETMAIN in PG because it resides in automatic storage.  
 FREED : on return from the logical level. There is no explicit FREEMAIN in PG because it resides in automatic storage.  
 WHERE : automatic storage supplied by the Kernel.  
 HOW TO FIND : chained from the PTA for the transaction.  
 PLCBs are in a singly linked list.

**PGWE**  
 The PGWE represents a task which is attempting to acquire the program lock. If the program lock is locked, the PGWE is added to the PGWE chain and the task is suspended.  
 ALLOCATED : when Program Manager attempts to obtain the program lock.  
 FREED : when the lock is obtained successfully.  
 WHERE : obtained from the pgwe subpool.  
 HOW TO FIND : elements are chained to the PGWE chain anchored in the PG anchor block by pga\_pgwe\_head.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	24	PGWE	
(0)	CHARACTER	8	PGWE_PREFIX	
(0)	ADDRESS	4	PGWE_NEXT	
(4)	ADDRESS	4	PGWE_PREV	set to 0 when remove from queue

Len	Type	Value	Name	Description
Language Name Declarations.				
Values are declared here for both the language as defined by the caller of PGDD DEFINE_ PROGRAM and as deduced by LE.				
The ppte_ lang_defined cannot have the value ppte_ not_deduced or ppte_ cobol2				
The ppte_ lang_defined value of ppte_ not_defined means that the program was EXEC LOADED, and language establishment could not find any language. The program is usually treated as not deduced. It is separated from not deduced so that language establishment is only done once.				
The following equates to apli values are done to improve performance. The ppte_ not_deduced value has no meaning to apli. The value of 255 is used as it cannot be given by CDURUN.				
4	DECIMAL	1	PSTE_NOT_DEFINED	not def'd by user
4	DECIMAL	255	PSTE_NOT_DEDUCED	not deduced by LE
4	DECIMAL	2	PSTE_ASSEMBLER	(or ada)
4	DECIMAL	4	PSTE_C370

## PGHM Handle manager declarations

```
=====
Handle Table Block
The Handle Manager owns and manages the repository of the data
which needs to be held to record a user program's EXEC CICS Handle
requests.
Data for each unique Condition, AID or Abend is retained as a
single entry in the repository: an entry in this repository is
known as a Handle Table Entry. There are three such tables of
entries: The Conditions Table which contains the entries for all
handled Conditions, the AIDs Table which contains the entries for
all handled AIDs and the Abend Table which contains the entry -
there can only be one entry in this table - for a handled Abend.
In addition, 16 bits are set aside in the Block to hold a set of
flags used to indicate whether any of the following conditions
have been handled by the user: RDATT, WRBRK, EOF, SIGNAL,
OVERFLOW, NOSPACE, QBUSY, NOSTG, ENQBUSY, NOJBUFSP, SYSBUSY and
SESSBUSY. These flags are used by various EXEC CICS API handling
modules and are provided to improve run-time performance in their
respective areas.
A Handle Table Block therefore holds all data representing a
single level of the handle state. A multi-level handling system
is enabled with this technique because the current Handle Table
Block can be stacked at any time, for example as a result of a
PUSH command, and a new level instated: similarly, a previous
level can be reinstated following a POP.
Addressability to the current Handle Table Block is via a pointer
named the Handle Level Token which is defined in the Program
Level Control Block owned by the PG Domain. The Program Level
Control Block is addressed via the PG Domain Transaction Storage
which is in turn anchored off the PG Transaction Token,
managed by the Transaction Manager. The Handle Manager obtains
addressability to the PG Token and thus to the Handle Level Token
using the DFHXMIQ Inquire_Transaction-Token service.
Whenever a Handle Table Block is PUSHed onto the stack and a new
Block created, the new Block contains a pointer, in its
htb_prev_table field, to the PUSHed Block. This both facilitates
the reinstatement of the previous Block if a POP is driven, but
also allows for the speedy freeing up of all Handle Table Blocks
at program termination.
A Handle Table Block is acquired out of the HTB subpool.

```

=====
Handle Table Entry
An unique entry exists in the appropriate table for every
possible condition, AID or abend.
Handle Condition entries are held within the table known as
htb_conditions_table: Handle AID entries are held within the
htb_aids_table: and the single Handle Abend entry is held in
htb_abend_table. All three tables form part of the current
Handle Table Block.
The first byte of every entry - named HTE_ACTIVE - is used to
denote whether or not that particular entry is active, ie that
some user handle for that condition, AID or abend has been issued
at the current level.
Should HTE_ACTIVE be 00, ie FALSE, then the entry is not active.
For any value of HTE_ACTIVE other than 00, the entry IS active.
=====

-
Program Manager Transaction Token

This is a special token, managed by the Transaction Manager, and
owned by the PG Domain.

The Handle Manager will use this token in order to find the
address of the PG Domain's transaction storage: this latter area
contains the Handle Level Token which is used by the Handle
Manager to access the current Handle Table Block.

The PG Transaction Token is accessed by the Handle Manager using
the DFHXMIQ Inquire_Transaction-Token service.

(4)	ADDRESS	4	TRANSACTION_STG_PTR	

```
=====
Handle Manager Register Save Area
A register save area has to be acquired by CICS during the
processing of Handle requests for Cobol programs: the area is
needed to hold the contents of the user's registers as at the
time of the Handle command. These register values remain
unchanged for the duration of that handle, and do not alter for
any intervening EXEC CICS commands.
The Handle registers are necessary because, in the case of Cobol
programs only, when a handled event occurs, CICS passes control
back to the program instruction immediately following the Handle:
this instruction is a Cobol 'goto lab1, lab2.... depending on
dfheigdi' statement and it needs the register values at the
original handle in order to operate correctly.
A single register save area is acquired when needed out of the
HMRSA subpool. Every distinct event within a single command is
able to share the same registers, therefore in order to assist
with the management of the save areas, a count is maintained for
each area. For every event in any one Handle command the
rsa_ user_count field is incremented by one. Whenever a new
handle for an event is issued, thereby rendering the first save
area unwanted for that event, the count is decremented. When the
count reaches zero, the register save area is returned to the
subpool.
Register save areas are chained together so that those in use may
be speedily freed during program termination.

## PRS Partner domain static storage area

```

CONTROL BLOCK NAME = DFHPRSPS
DESCRIPTIVE NAME = CICS Partner Static Storage Area
FUNCTION =
    This control block provides the global information for
    the Partner Resource Manager which must be around for
    the duration of the CICS execution.
    It contains:
        Partner Resource Manager subpool token
        Partner Resource Manager initialization suspend token
        Partner Resource Manager status
        Addresses of Partner Resource Manager gates
LIFETIME =
    The control block is created during CICS initialization
    by DFHPRIN1, and exists for as long as the CICS system.
STORAGE CLASS =
    The control block is in subpool DFHAPDAN. The token for
    this subpool is stored in the CSA optional features list
    in field CSADSANT.
LOCATION =
    The Partner Static Area is located by field SSZPRM in
    the static storage address list.

## PTE Partner table entry

```

=====
CONTROL BLOCK NAME = DFHPTEPS
DESCRIPTIVE NAME = CICS (PARTNER)
    Partner Table Entry
FUNCTION =
    Defines the layouts of entries in the Partner Table,
    as it exists both in main storage and in the CICS catalog.
    The Partner Table is owned by the Partner component, also
    called the Partner Resource Manager, which encapsulates
    all accesses to the table.
    The Partner Table is the CICS implementation of the Side
    Information Table introduced by SAA CPI-C. (See the SAA
    CPI Communications Reference for details.) Each entry in
    the Partner Table contains information needed to
    initialize a conversation with a partner program on a
    remote LU, which can thus be specified by the application
    by specifying only the name of the entry (known as the
    sym_dest_name).
    An entry in the Partner Table contains the following
    pieces of information:
    - partner_LU_name
      indicates the name of the LU where the partner program
      is located. It can be either a simple network LU
      name, or netname, of one to eight characters, or else
      a fully qualified name of the form network.netname
      where network is a one to eight character network id
      and netname is a one to eight character network LU
      name.
    - profile_name
      the name of the CICS communication profile. This
      profile contains a mode_name which is used to designate
      the properties for the session which will be allocated
      for the conversation.
    - TP_name
      the name of the remote transaction program.
    Note that this implementation accesses the mode_name of
    the side information indirectly via the CICS profile.
LIFETIME =
    PTEs are created and destroyed only via the PRPT gate of
    the Partner Resource Manager, module DFHPRPT.
STORAGE CLASS =
    Storage for PTEs is drawn from a subpool created by
    DFHPRRP for this sole purpose.
LOCATION =
    PTEs are located via scatter tables managed by DFHTMP.

## RDUB Resource definition update block

CONTROL BLOCK NAME = DFHRDUB  
 DESCRIPTIVE NAME = CICS Resource definition update Block  
 SOURCE = DFHRRAB DESIGN part of DFHAPRDR DESIGN  
 FUNCTION =

DFHRDUB describes the DSECT for the Resource definition Update Block. This block lists deletions that have been made by this unit-of-work from tables. It is chained both from the RRAB and from the RDAB.

When an add or quiesce is performed, the contents of RDUBs for other tasks are examined to see if we would overwrite an entry which may be backed out subsequently. If one is found the taskid and tranid are returned as though they had been locks found by TMP.

The Resource Definition Update Block is built by Table Builder Services as part of the processing of an Install or Delete. It is added both to a chain from the Resource definition Recovery Anchor Block (RRAB), and from the Resource Definition Anchor Block (RDAB).

The Resource Definition Update Block is deleted when the associated RRAB is deleted.

Consider the following cases :-

Task 1 deletes an entry for terminal ABCD  
 Task 2 must not be allowed to add another entry for ABCD until Task 1 has committed its unit of work. We used to use TMP to hold a global lock until Task1's syncpoint but this means that we are very limited in the number of install requests that can be processed. So now we hold a list of update requested TCT names in the RDUB which allows us to ensure that full concurrency can occur.

Another case is that if Task 1 adds an entry for WXYZ we must show it to Task 1, but not to Task 2 or 3. For tasks which dont specify SHOW\_UPDATES on ZGTI this happens because TCTTEDAP,TCTTEDDP,TCSEDAP or TCSEDDP are on. If SHOW\_UPDATES(YES) is specified, ZGTI will INQUIRE\_LOCK find out if this entry is soft-locked by another task and if so, it will not be returned to the requestor.

LIFETIME =  
 Created when the first Table Builder call that causes a delete is processed.  
 Deleted at end of a UOW.

STORAGE CLASS =  
 Above 16M line.

LOCATION =  
 Chained from the RRAB and the RDAB.

INNER CONTROL BLOCKS =

## RMLK Recovery manager link class data

-

This is the declaration for the rmlk\_class\_data class.

-

The link class data consists of a list of all the links in the system and a tokenset.

(94)	CHAR Protected	4	*	
(98)	CHAR Protected	32	POLLER	Poller instance.
(98)	CHAR Private	4	*	

Offset Hex	Type	Len	Name (Dim)	Description
--				
				vote is the result of the poll so far.
				coordinator is the address of the coordinator voter or zero if there is no coordinator voter.
				indoubt determines whether or not we are in the indoubt state. If we are indoubt, then there must be a coordinator voter otherwise there would be no way of resolving the indoubt.
				resynchronisation_ in_progress records the resynchronisation state. This prevents multiple concurrent attempt to resynchronise and also protects us from a forced decision during resynchronisation.
				read_ only is 'yes' if and only if all the voters polled so far have indicated that they are read-only.
				continue is 'yes' if there will be a next UOW. Sometimes there will be a next UOW even when continue is 'no'. This is due to some voter preventing the next UOW from continuing even though the application requested it. In such cases, the next UOW is always aborted without the application having a chance to do further work.
(A0)	CHAR Protected	17	INSTANCE_ DATA_BLOCK	RMPO instance data
(A0)	ADDRESS Protected	4	COORDINATOR	coordinator voter for this poller
(A4)	UNSIGNED Protected	1	VOTE	result of polling so far

--				
				As &ci. class is a subclass of &id. class each &ci. is an &id..
				Each &ci. also records the client type, the domain and gate for calls back to the named client. They also have a chain representing tasks waiting to call back a client that has not yet set its gate. The objects on the waiters chain are contained in the automatic storage of the waiting task.
				The Send method allows one call to be made to the client before the gate is set without suspending the calling task. In this case the parameter list being sent to the client is copied and hung off the &ci. by rmc_i_sent_plist_ptr.

(34)	CHAR Private	4	*	
(38)	OBJECT	32	RMLS_POLLER	Poller Object
	IsA(RMPO)			
	Protected			
(38)	CHAR Private	4	*	

vote is the result of the poll so far.

coordinator is the address of the coordinator voter or zero if there is no coordinator voter.

indoubt determines whether or not we are in the indoubt state. If we are indoubt, then there must be a coordinator voter otherwise there would be no way of resolving the indoubt.

resynchronisation\_ in\_progress records the resynchronisation state. This prevents multiple concurrent attempt to resynchronise and also protects us from a forced decision during resynchronisation.

read\_ only is 'yes' if and only if all the voters polled so far have indicated that they are read-only.

continue is 'yes' if there will be a next UOW. Sometimes there will be a next UOW even when continue is 'no'. This is due to some voter preventing the next UOW from continuing even though the application requested it. In such cases, the next UOW is always aborted without the application having a chance to do further work.

## RMRO Recovery manager resource owner instance

-

All classes in &rm. domain inherit from the &rm. Object Class (RMOB). This class is completely virtual and contains no data, either class or instance. It merely provides signatures for common methods that all &rm. domain classes may need. As virtual methods, it is the responsibility of a concrete class inheriting from RMOB to provide implementations of these methods.

Currently there are two such methods. Both are class methods (they don't take an object of the class as a parameter).

The class data consists of the identity object for system logging. Its purpose is to allow the delivery method to distinguish records which are being delivered from RMSL from those which are being delivered from RMUW. In most cases, the content of the records is sufficient to make this distinction, but using different identities (i.e. with different scope values) for system and UOW logging is more general and allows identical log records to be logged to RMSL and RMUW without risk of confusion on delivery.

## RMUW Recovery manager unit of work instance

-

The rmuw class is the Recovery Manager Unit of Work.

It may only be used by Recovery Manager. It is used to implement the RMUW gate.

rmuw inherits from rml0 and, via simulated inheritance, from rmpo and rmlg.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	DeclareClass	1360	RMUW	
<b>INSTANCE DATA</b>				
<b>Inherited Data</b>				
(0)	CHAR Private	4	*	

The instance data of a RMUW object includes an instance of a Poller since the inheritance from Poller is simulated.

(98)	CHAR Private	4	*	

vote is the result of the poll so far.

coordinator is the address of the coordinator voter or zero if there is no coordinator voter.

indoubt determines whether or not we are in the indoubt state. If we are indoubt, then there must be a coordinator voter otherwise there would be no way of resolving the indoubt.

resynchronisation\_ in\_progress records the resynchronisation state. This prevents multiple concurrent attempt to resynchronise and also protects us from a forced decision during resynchronisation.

read\_ only is 'yes' if and only if all the voters polled so far have indicated that they are read-only.

continue is 'yes' if there will be a next UOW. Sometimes there will be a next UOW even when continue is 'no'. This is due to some voter preventing the next UOW from continuing even though the application requested it. In such cases, the next UOW is always aborted without the application having a chance to do further work.

Offset Hex	Type	Len	Name (Dim)	Description
--				
				The RMRO instance is prepared by preparing the corresponding Resource Owner.
--				
				The RMRO instance is committed by committing the corresponding Resource Owner.
--				
				The instance data for a Resource Owner object includes its identity.
				A type is declared for force tokens and a null force token is declared.
				A log header type is declared the length field of which includes the length of the resource id. which is appended to the header structure. Whether or not there is a resource id. is indicated by the resource id. existence bit. The source field in the discriminant is always 'private' for a resource owner log record as this class is the source of the log record as far as the RM classes are concerned since RM doesn't own or understand the format of data which is passed on the APPEND function.
				The backout structure is used during backout and backout retry to track the progress of backout. If the pointer to this structure is null, then either backout has not yet started or else backout has completed successfully. The backout structure itself is declared internally to the class as the users of the class should be insensitive to it.
				The commit structure is used for forget processing. If the pointer to this structure is null, then there has been no request forget. The commit structure itself is declared internally to the class as the users of the class should be insensitive to it.

## RMUW Recovery manager unit of work class data

-

This is the declaration for the rmuw\_class\_data class.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	DeclareClass	2520	RMUW_CLASS_DATA	

The UOW class data consists of some types, the address of a pro-forma UOW, a couple of token sets for UOW and UOW browse tokens, respectively, a chain of UOWs, a chain of UOW browses, a UOW factory, and a register of UOW log clients.

### INSTANCE DATA

#### Declared Data

(0)	CHAR Protected	2516	CLASS_DATA_BLOCK	RMUW class data
(0)	STRUCTURE IsA(RM_EYE_CATCHER) Protected	16	UOW_CD_EYE_CATCHER	
(0)	UNSIGNED Public	2	RM_EYE_LEN	Eye-catcher object length
(2)	UNSIGNED Public	2	RM_EYE_OFFSET	offset of eye-catcher in object
(4)	CHAR Public	12	RM_EYE_STRING	'>DFHRMxxxxxx'
(10)	ADDRESS Protected	4	PROFORMA_ UOW_POINTER	
(14)	CHAR Protected	4	*	Pro-forma UOW address Reserved
(18)	OBJECT IsA(HOP_DCHAIN) Protected	40	UOW_CHAIN	Global UOW chain

#### Inherited Data

(18)	CHAR Private	4	*

## RRAB Resource definition recovery definitions

CONTROL BLOCK NAME = DFHRRAB  
 DESCRIPTIVE NAME = CICS Resource definition Recovery Anchor  
 FUNCTION =  
 DFHRRAB describes the DSECT for the Resource definition Recovery Anchor Block. This block serves as an anchor for the set of Resource Recovery Anchor Blocks with Names (RABNs) and also two action-lists containing Resource Definition Action Lists (RDALs). These action-lists and RABNs describe the work undertaken during an Install process for communication resources (terminals, typeterms, connections and sessions). It also contains a flag which indicates whether Terminal Object Resolution needs to be driven at the end of the UOW. There is only one RRAB for each UOW, fresh requests reuse an existing RRAB.

The RRAB also points to a list of Resource definition update blocks which list the definitions that have been locked during this UOW. This list is checked before an add to ensure that we are not attempting to add a defn which another UOW is attempting to delete.

The Resource definition Recovery Anchor Block is built by Table Builder Services as part of the processing of an Install (or Delete) request. It is also built by Terminal Object Resolution during Install or Delete Requests. It is used as the Recovery Manager Client token for 'APRD'.

The Resource definition Recovery Anchor Block is deleted when all the action-lists and RABN chain are empty the TOR flag is reset, the RDUB chain is empty, eith by TBS, TOR or DFHAPRD. At the same time Recovery Manager token is reset to zero.

LIFETIME =  
 Created when the first Table Builder or Terminal Object Resolution request that is recoverable is processed, or a lock is obtained.  
 Deleted at end of transaction.

STORAGE CLASS =  
 Above 16M line.

LOCATION =  
 Issuing an INQUIRE\_WORK\_TOKEN to the recovery manager with Client Name 'APRD' returns the address of the Resource Recovery Anchor Block.

CONTROL BLOCK NAME = DFHRABN
DESCRIPTIVE NAME = CICS Resource Recovery Atom Block Name
SOURCE = DFHRRAB DESIGN part of DFHAPRDR DESIGN
FUNCTION =
  DFHRABN describes the DSECT for the Resource Recovery
  Atom Block Name. This block serves as an anchor for an
  action-list. It defines the set of actions that are
  performed for a named 'atom' of resource recovery for
  either a Pipe-Line or a Connection definition. It retains
  a flag that describes the back-out of the atom in case
  further actions for that atom arrive, so that they can
  be prevented.
  The Resource Recovery Atom Block Name is built by Table
  Builder Services as part of the processing of an Install
  request. It is added to a chain from the Resource
  definition Recovery Anchor Block (RRAB), and pointed to as
  the active RABN.
  The Resource Recovery Anchor Block is deleted when an
  END_ATOMS call is made or the UOW ends. The action-list
  is transferred to the delayed-action-list on the RRAB.
LIFETIME =
  Created when the first Table Builder or Terminal Object
  Resolution request that is recoverable for an atom is
  processed.
  Deleted at end of a UOW.
STORAGE CLASS =
  Above 16M line.
LOCATION =
  Chained from the RRAB.

## RUEI Logger reusable extended iliffe vector class

-

The RUEI and MRUEI classes are both collected into the DFHLGUDC copybook which may then in turn be included by calling code.

-

RUEI is the Reusable Extended Iliffe Vector class.

Before declaring this class, the user should declare a constant RUEI\_SIZE to indicate the number of elements which may be set in this particular vector.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	DeclareClass	20	RUEI	

--  
-

The reusable extended iliffe vector contains an array of elements and a continuation pointer. Note that the continuation pointer follows the last element so that the browse need not record the current vector address as well as the current element address.

The vector also contains two sums of element lengths. One sum (ruei\_elem\_length\_sum) contains the total length of data elements pointed to by this vector alone. The other sum (ruei\_elem\_length\_sum\_sum) contains the sum of lengths of data elements in this vector plus the lengths of all the elements pointed to in the linked list of vectors pointed to by this ruei.

Finally, a public constant is included to denote the end of a browse.

(0)	CHARACTER	8	SMA_SUA_POOLHEAD	

PPA - Page Pool control Area  
 There is a PPA for each DSA (ie there are 8). The PPAs are chained from the SMA. In addition there is an array in the SMA which allows each PPA to be addressed directly.  
 Each SCA contains the address of the PPA from which that subpool is allocated.  
 Other blocks chained from the PPA are:  
 PPA\_ NEXT - address of next PPA.  
 PPA\_ PREV - address of previous PPA.  
 PPA\_ PPX\_FIRST - address of the first PPX for this DSA.  
 PPA\_ PPX\_LAST - address of the last PPX for this DSA.

QPH - Quickcell page header block.  
 Note that offsets must remain the same as within the inline  
 getmain/freemain macro DFHSMGFI.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	48	QPH	
(0)	CHARACTER	32	QPH_PREFIX	
(0)	HALFWORD	2	QPH_LENGTH	
(2)	CHARACTER	1	QPH_ARROW	
(3)	CHARACTER	3	QPH_DFH	
(6)	CHARACTER	2	QPH_DOMID	
(8)	CHARACTER	8	QPH_BLOCK_NAME	
(10)	CHARACTER	8	QPH_NAME	subpool name
(18)	ADDRESS	4	QPH_NEXT	-> next QPH
(1C)	ADDRESS	4	QPH_PREV	-> previous QPH
(20)	CHARACTER	16	*	
(20)	ADDRESS	4	QPH_NEXT_FREE	-> next QPH on free chain
(24)	ADDRESS	4	QPH_FIRST_FREE_CELL	-> first free cell
(28)	HALFWORD	2	QPH_NUMBER_FREE_CELLS	current free cells
(2A)	CHARACTER	2	QPH_FLAGS	
(2A)	BITSTRING	1	*	
			QPH_DONT_FREE_PAGE	= '1'b, don't free page when empty
			QPH_ON_FREE_CHAIN	= '1'B, page is on free chain
			*	reserved
(2B)	BITSTRING	1	*	reserved
(2C)	ADDRESS	4	QPH_SCAP	-> SCA owning subpool
(30)	CHARACTER		*	

QPF - quickcell page free element.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	8	QPF	
(0)	ADDRESS	4	QPF_SCAP	free element check field
(4)	ADDRESS	4	QPF_NEXT	-> next quickcell element

SCQ - quickcell element (for SCE and SCF descriptors)

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	24	SCQ	
(0)	ADDRESS	4	SCQ_NEXT	-> next quickcell element

SCE - element descriptor

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	24	SCE	
(0)	CHARACTER	16	SCE_PREFIX	
(0)	ADDRESS	4	SCE_NEXT	-> next element descriptor
(4)	ADDRESS	4	SCE_PREV	-> prev element descriptor
(8)	ADDRESS	4	SCE_ADDR	-> element storage
(C)	FULLWORD	4	SCE_LEN	element length
(10)	CHARACTER	8	*	
(10)	ADDRESS	4	SCE_PPXP	-> PPX
(14)	ADDRESS	4	*	reserved
(18)	CHARACTER		*	

SCF - free storage descriptor.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	24	SCF	
(0)	CHARACTER	16	SCF_PREFIX	
(0)	ADDRESS	4	SCF_NEXT	-> next SCF
(4)	ADDRESS	4	SCF_PREV	-> previous SCF
(8)	ADDRESS	4	SCF_ADDR	-> free storage block

Maxpool is the upper bound of the array of pool chains whose dimension is 0:maxpool. Maxpool is calculated as $(2 \text{ to the power } n) - 1$ where n is the number of open TCB types that can inherit a subspace. n is defined by the dispatcher as num_subspace_open_types. $(2 \text{ to the power of } n)$ is defined by the dispatcher as combo_subspace_open_types.				
4	DECIMAL	1	MAXPOOL	
Total number of types of open TCB.				
1	DECIMAL	3	NUM_OPEN_TYPES	
Number of types of open TCB which can inherit subspaces (ie DSIT_INHERIT_YES).				
1	DECIMAL	1	NUM_SUBSPACE_OPEN_TYPES	
Number of combinations of types of open TCB which can inherit subspaces (ie DSIT_INHERIT_YES). This number is 2 to the power NUM_SUBSPACE_OPEN_TYPES.				
4	DECIMAL	2	COMBO_SUBSPACE_OPEN_TYPES

### SOA Sockets anchor block

-

This anchor block contains the global storage for the SO domain.

It defines the domain state information, variables and constants required by the SO gates and other external programs such as DFHSOTRI, the domain trace interpretation routine.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	328	SOA

-

There is one LTE for each listening socket that is handled by the SO domain listener. The lte\_port is kept in the prefix for sorting and searching. The chain of LTE's is kept sorted in ascending order of port number.

Offset Hex	Type	Len	Name (Dim)	Description

## TIA Timer domain anchor block

CONTROL BLOCK NAME = DFHTIA  
DESCRIPTIVE NAME = CICS Timer Domain (TI) Control Blocks  
FUNCTION =

This file contains the data structure declarations used by the Timer Domain.

The data structures are:

DFHTIA - TI Anchor block  
TIMER\_REQUEST\_ELEMENT - TI Request Element

Notes:

Dependencies = S/370

Restrictions = none

Register Conventions = domain standard (no special usage)

Patch Label = N/A

Module Type = N/A

Attributes = N/A

TI domain Anchor Block storage definition

Offset Hex	Type	Len	Name (Dim)	Description

## UDB User domain user data block

DFHUSUDC US User Data Block

The UDB defines the operator data and user attributes associated with a user who has been added to the CICS system.

It is owned by the USAD Gate of the user domain.

It contains the non-security attributes of the user that have been obtained from the CICS and LANGUAGE segments in the External Security Manager's database. It also contains a pointer to the ACEE (Access Control Environment Element), but ONLY for the use of the EXEC CICS ADDRESS ACEE command. There are NO security capabilities contained in the UDB - only the External Security Manager has knowledge of these. If the User Data Block is enabled for timeout processing, then the user timeout queue entry (UTQE) token, which identifies the entry in the User Timeout Queue (UTQ), is stored in the user data block.

Offset Hex	Type	Len	Name (Dim)	Description

## USXD User domain transaction data

-

USXD\_TRANSACTION\_DATA

This structure defines the User-Domain-related transaction storage pointed to by the User Domain transaction token. There is one such structure for every transaction.

It contains one or more user tokens that have been associated with the transaction, together with the pointers to the associated User Data Blocks. One of these pointers is designated as the active UDB pointer, and that is the UDB referenced whenever user attributes for the transaction are queried.

Offset Hex	Type	Len	Name (Dim)	Description

## WBA1C      Web business logic compatibility interface

This copybook defines the 'parameter list' which is passed to program DFHWBA1 to perform the link to the business logic.

A brief description of the fields and their usage follows:

Variable

Type and Usage

wba1\_parms\_ptr

A pointer variable used as base for the interface parameter list

wba1\_parms

top level of the interface parameter list structure

wba1\_eyecatcher

A char(8) variable which should contain ' BLIP '

wba1\_converter\_program\_name

A char(8) field containing the name of the program for decode and encode.

wba1\_client\_address

The IP address of the client.

decode\_client\_address\_string

The IP address of the client in "ww.xx.yy.zz" format.

wba1\_data\_ptr

A pointer to the storage containing the HTTP request. For BLIO this is an offset.

wba1\_method\_offset

Offset into the HTTP request of the string containing the method specified for the request.

wba1\_http\_version\_offset

Offset into the HTTP request of the string containing the version for the request.

wba1\_resource\_offset

Offset into the HTTP request of the string identifying the CICS resource to be invoked for this request.

wba1\_header\_offset

Offset into the HTTP request of the first HTTP header.

wba1\_user\_data\_offset

Offset into the HTTP request to the "body" of the request - namely any forms data.

wba1\_method\_length

Length of the string containing the method.

wba1\_version\_length

Length of the string containing the version of HTTP supported by the client.

wba1\_resource\_length

Length of the string identifying the CICS resource to be invoked by this HTTP request.

wba1\_header\_length

Length of the HTTP header request information.(all the headers)

wba1\_user\_data\_length

Length of the HTTP request body.

wba1\_input\_data\_length

Length of the HTTP request body.

wba1\_server\_program\_name

A char(8) name identifying the CICS program that dfhwba1 is to invoke by an EXEC CICS LINK.

wba1\_user\_token

A fullword token which uniquely identifies the HTTP request being processed.

wba1\_outdata\_ptr

A pointer to the output data.For BLIO this is an offset.

wba1\_response

Response code of this request.

wba1\_data

Data for this request if the data is given by offset.

## WBBLC Web business logic interface parameters

This copybook defines the 'parameter list' which is passed to program DFHWBBLI to perform the link to the business logic.

A brief description of the fields and their usage follows:

### Variable

#### Type and Usage

wbbl\_parms\_ptr

A pointer variable used as base for the interface parameter list

wbbl\_length

A halfword binary number that must be set to the total length of the BLI parameter list.

wbbl\_eyecatcher

A 14-character field that must be set to the standard eyecatcher string '>DFHWBBLIPARMS'.

wbbl\_status\_size

A one-byte binary field that must be set to the length of the "wbbl\_status" substructure (currently 8).

wbbl\_mode

A single character that indicates the addressing mode for "wbbl\_indata" and "wbbl\_outdata". It must be set to 'P' to indicate that these values are pointers, or to 'O' to indicate that these values are offsets (from the start of the parameter list).

wbbl\_version

A halfword binary number that indicates which version of the BLI parameter list is currently being used. It should be set using the constant value "wbbl\_current\_version".

wbbl\_prolog\_size

A halfword binary number that must be set to the length of the "wbbl\_prolog" substructure (currently 56).

wbbl\_vector\_size

A halfword binary number that must be set to the length of the "wbbl\_vector" substructure (currently 64).

wbbl\_response

A fullword binary field in which DFHWBBLI returns its response code.

wbbl\_client\_address

A fullword 32-bit field that must be set to the binary IP address of the client, if this is known.

wbbl\_client\_address\_length

A one-byte binary field that must be set to the length of "wbbl\_client\_address\_string".

wbbl\_client\_address\_string

A string of up to 15 characters which are the "dotted-decimal" representation of "wbbl\_client\_address", padded on the right with binary zeroes.

wbbl\_converter\_program\_name

The eight-character name of the program that is to be used for converter DECODE and ENCODE functions.

wbbl\_server\_program\_name

The eight-character name of the application program that is to be used to process the request and produce the response.

wbbl\_user\_token

An eight-character field in which the caller of DFHWBBLI can pass data which identifies the current conversational state with the client. It is usually set to the first eight characters of the +query-string+ portion of the URL (that is, any data following a question mark (?)).

wbbl\_ssl\_keysize

Size of the encryption key negotiated during the SSL handshake, if secure sockets layer is being used. Zero if SSL is not being used.

wbbl\_indata\_ptr

If "wbbl\_mode" is 'P', this is the address of the HTTP request data that is to be passed to the application.

wbbl\_indata\_offset

If "wbbl\_mode" is 'O', this field is the offset (from the start of the parameter list) of the HTTP request data that is to be passed to the application.

wbbl\_indata\_length

A fullword binary number that must be set to the length of the data located by "wbbl\_indata\_ptr" or "wbbl\_indata\_offset".

wbbl\_outdata\_ptr  
 If "wbbl\_mode" is 'P', this is the fullword address in which DFHWBBLI will return the address of the response data from the application. This address is not necessarily the same as "wbbl\_indata\_ptr".

wbbl\_outdata\_offset  
 If "wbbl\_mode" is 'O', this is the fullword in which DFHWBBLI will return the offset (from the start of the parameter list) of the response data from the application. This offset is not necessarily the same as "wbbl\_indata\_offset".

wbbl\_outdata\_length  
 The fullword binary field in which DFHWBBLI will return the length of the response data located by "wbbl\_outdata\_ptr" or "wbbl\_outdata\_offset".

wbbl\_method\_offset, wbbl\_method\_length  
 Two fullword binary numbers that must contain the offset (from the start of the request data) and the length of the HTTP method that is to be used to process the request. The method should be one of: GET, POST, HEAD, PUT, DELETE, LINK, UNLINK, or REQUEUE.

wbbl\_http\_version\_offset, wbbl\_http\_version\_length  
 Two fullword binary numbers that must contain the offset (from the start of the request data) and the length of the version of the HTTP protocol that is to be used to process the request.

wbbl\_resource\_offset, wbbl\_resource\_length  
 Two fullword binary numbers that must contain the offset (from the start of the request data) and the length of the URI resource that is being requested (that is, the non-network part of the URL, starting at the first slash (/) in the URL).

wbbl\_header\_offset, wbbl\_header\_length  
 Two fullword binary numbers that must contain the offset (from the start of the request data) and the length of the HTTP headers associated with this request. This is a list of zero or more headers in the format:

header\_name: header\_valueCRLF

where the colon and space (: ) delimit the header name from the value, and CRLF (X'0D25') delimits the end of the header value. The end of the list is denoted by an empty header, which contains only a single CRLF.

The first CRLF-delimited line of an HTTP request is not regarded as a header. The offset to the start of the headers is to the character immediately following the CRLF that delimits the first HTTP request line (which may be another CRLF if no headers are present).

wbbl\_user\_data\_offset, wbbl\_user\_data\_length  
 Two fullword binary numbers that must contain the offset (from the start of the request data) and the length of the body of the HTTP request, if any.

wbbl\_client\_certificate\_offset, wbbl\_client\_certificate\_length  
 Two fullword binary numbers that must contain the offset (from the start of the request data) and the length of the X.509 client certificate, if any. If the certificate is present, it must be in its binary BER-encoded form, and not base-64 encoded.

Offset Hex	Type	Len	Name (Dim)	Description

## **WBEPC**      **Web error program parms**

-

These declarations define the commarea which is passed to the user replaceable Web Error program by the CICS WEB Interface via a Program Manager Domain EXEC\_LINK call.

Variable  
Meaning

< wbec\_length > (input)  
Length of DFHWBEP copybook

< wbec\_eyecatcher >  
A character field to contain an eyecatcher to help with diagnostics.  
The caller sets this to '>wbeca '  
before calling the Web Error Program

< wbec\_version >  
Version of DFHWBEP copybook being passed by CICS

< wbec\_error\_code > (input)  
The two byte signed binary number indicating the cause of the original error. Constants which this field may contain can be found in copybook DFHWBUCC.

< wbec\_abend\_code > (input)  
The four character abend code associated with this exception.

< wbec\_message\_number > (input)  
Message number associated with this exception

< wbec\_message\_ptr > (input)  
A pointer to the CICS message text associated with this exception

< wbec\_response\_len > (input)  
The full word length of the HTTP error response to be returned to the HTTP client. On entry to DFHWBEP this contains the default CICS HTTP error response for the reported error.

< wbec\_response\_ptr > (input)  
A pointer to the 32K buffer containing the HTTP error response to be returned to the HTTP client. On entry to DFHWBEP this contains the default HTTP error response returned by CICS for the reported error.

< wbec\_response\_len > (input)  
The full word length of the response message text associated with this exception.

< wbec\_client\_address\_len > (input)  
One byte field containing the length of the address contained in wbec\_client\_address

< wbec\_client\_address > (input)  
The 15 character TCPIP address of the client.

< wbec\_server\_address\_len > (input)  
One byte field containing the length of the address contained in wbec\_server\_address

< wbec\_server\_address > (input)  
The 15 character TCPIP address of the TCP/IP stack on which this request was received

< wbec\_tcpipservice\_name > (input)  
Name of the TCPIP SERVICE associated with the failing request

< wbec\_converter\_program > (input)  
The 8 character name of the converter program associated with this request

< wbep\_target\_program > (input)  
 The target program associated with the web request.

< wbep\_failing\_program > (input)  
 The program which CICS was invoking when the failure occurred

< wbep\_http\_response\_code > (input)  
 HTTP error response code CICS is returning for this error.  
 This can be overridden by changing the content of the buffer  
 containing the HTTP response

< wbep\_analyzer\_response > (input)  
 Response code returned by analyzer program

< wbep\_analyzer\_reason > (input)  
 Reason code returned by analyzer program

< wbep\_converter\_response > (input)  
 Response code returned by converter program

< wbep\_converter\_reason > (input)  
 Reason code returned by converter program

**WBUCC    Web interface urp constants**

This copybook defines the constants which are used by the User Replaceable Programs.

< Constant >  
Meaning

< URP\_DECODE >  
The call is to the decode function of the converter program.

< URP\_ENCODE >  
The call is to the encode function of the converter program.

< URP\_OK >  
The RESPONSE value from the User Replaceable Program is OK.

< URP\_EXCEPTION >  
The RESPONSE value from the User Replaceable Program is EXCEPTION.

< URP\_INVALID >  
The RESPONSE value from the User Replaceable Program is INVALID.

< URP\_DISASTER >  
The RESPONSE value from the User Replaceable Program is DISASTER.

< URP\_CORRUPT\_CLIENT\_DATA >  
An architected REASON for an EXCEPTION response produced by the converter decode function.

< URP\_SECURITY\_FAILURE >  
An architected REASON for an EXCEPTION response produced by the converter decode function.

< URP\_RESOURCE\_TOO\_SHORT >  
Reason code returned by CICS-supplied default Analyzer DFHWBADX if the URI on the HTTP Request is shorter than that expected by the default analyzer.

< URP\_FIRST\_SLASH\_MISSING >  
Reason code returned by CICS-supplied default Analyzer DFHWBADX if it cannot locate an EBCDIC "/" character in the URI of the incoming data.

< URP\_CONV\_NAME\_INVALID >  
Reason code returned by CICS-supplied default Analyzer DFHWBADX if it detects that the name of the converter program to be invoked for this request is greater than 8 bytes long or has a length of zero.

< URP\_TRAN\_NAME\_INVALID >  
Reason code returned by CICS-supplied default Analyzer DFHWBADX if it detects that the name of the transaction to be started by CICS to process this request is greater than 8 bytes long or has a length of zero.

< URP\_SERV\_NAME\_INVALID >  
Reason code returned by CICS-supplied default Analyzer DFHWBADX if it detects that the name of the target program to be invoked for this request is greater than 8 bytes long, or has a length of zero.

< URP\_USER\_TOKEN\_INVALID >  
 Reason code returned by CICS-supplied default Analyzer DFHWBADX  
 if  
 it detects that the name of the target program to be invoked for  
 this request is greater than 8 bytes long, or has a length of  
 zero.

< URP\_SERVER\_NAME\_MISSING >  
 Reason code returned by CICS-supplied default Analyzer DFHWBADX  
 if  
 it cannot identify the name of the target program from the URI in  
 the  
 HTTP request received.

< eyecatchers >  
 Definitions of the eyecatchers at the front  
 of the COMMAREAs passed to the Web Interface  
 user replaceable programs.

## WRB Web request block class

this copybook encapsulates the code and control blocks associated with the processing of an HTTP (or non-HTTP) request received on a port associated with a CICS Web TCPIP SERVICE.

Each request is represented by a WebRequest object (wrb). The WebRequests form a doubly-linked list which is anchored in the Web anchor block (wba). The WebRequest object contains all the information needed to process the request.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	DeclareClass	4	WEBREQ	
<b>INSTANCE DATA</b>				
<b>Declared Data</b>				
(0)	CHAR Private	4	*	

The following control blocks are defined:

WebRequest class anchor block (wra)  
 contains class related private information, including the anchor for the chain of class objects currently installed. Created during initialization of the Web Domain. Lives for the lifetime of CICS.

WebRequest class object (wrb)  
 Contains information about a Class object which is currently installed - created when incoming data arrives on a Port with CWXN specified as the transaction to be started to process the new work. Chained together as a linked list.

WebRequest class browse block (wrbr)  
 Contains information about an ongoing browse of the WebRequest objects. Created at INQUIRE START, and destroyed at INQUIRE END.

WRA - WebRequest class anchor block

## XCCBC External CICS interface control blocks

CONTROL BLOCK NAME = DFHXCCBC  
 DESCRIPTIVE NAME = CICS External CICS Interface Control  
 Block definitions

FUNCTION =  
 This file contains the control block and constant declarations used by the External CICS Interface. The file is included in each EXCI module.  
 The control blocks are:  
 XCGLOBAL - XCGLOBAL block  
 XCUSER - XCUSER block  
 XCPPIPE - XCPPIPE block

All blocks are MVS GETMAINED from storage above the 16MB line, subpool 1.

LIFETIME =  
 There is only ever one XCGLOBAL block per TCB, and it is created on the first Initialise\_user call for that TCB. It remains until TCB Termination.  
 An XCUSER Block is created for each new 'user' defined to the system via an Initialise\_user call. It remains until TCB termination.  
 An XCPPIPE block is created when an allocate\_pipe EXCI request is issued for a particular user. It is destroyed when a deallocate\_pipe request is issued, or at TCB termination.

LOCATION =  
 XCGLOBAL is chained off the batch AFCB.  
 XCUSER blocks are chained together and anchored off XCGLOBAL  
 XCPPIPE blocks for a particular user are chained together and anchored off the relevant XCUSER.

NOTES :  
 DEPENDENCIES = S/370  
 RESTRICTIONS = none  
 MODULE TYPE = Control block definition  
 XCGLOBAL Block

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	337	XCGLOBAL	
(0)	CHARACTER	16	XCG_PREFIX	Standard Prefix
(0)	HALFWORD	2	XCG_LENGTH	
(2)	CHARACTER	14	XCG_EYE	>XC_GLOBAL
Module addresses				
(10)	ADDRESS	4	XCG_PRH_ADDR	Entry Point of DFHXCPRH
(14)	ADDRESS	4	XCG_XFQ_ADDR	Entry Point of DFHXFQ
(18)	ADDRESS	4	XCG_EIP_ADDR	Entry Point of DFHXCEIP
(1C)	ADDRESS	4	XCG_TRP_ADDR	Entry Point of DFHXCTRP
(20)	ADDRESS	4	XCG_TR1_ADDR	Entry Point of DFHXCTRI
(24)	ADDRESS	4	XCG_DMP_ADDR	Entry Point of DFHXCDMP

## XMCAT Transaction manager catalog records

-

XM domain state catalog record

Currently the only piece of state that is saved over a CICS restart is the MXT limit.

The DTRTRAN isn't saved because no EXEC CICS SET DTRTRAN service is currently available. It is always read from the SIT so there is no need to save it over a warm start.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	4	XM_STATE_	
(0)	UNSIGNED	4	CATALOG_RECORD CAT_MXT_LIMIT	

--  
-

Transaction definition catalog record.

The transaction definition externals are catalogued together with each of the aliases that the definition has. The alias existence bits indicate whether the alias names stored later in the record are actually active.

Note that the 64 character TPName is not written to the catalog in the case when the definition does not have an active TPName alias.

Both the externals and the alias information are copied directly from the transaction definition to this catalog record. The alias information is defined as a LIKE as it needs to be interpreted when the definition is recovered from the catalog. The externals are copied directly into the recovered definition and don't need to be interpreted.

Offset Hex	Type	Len	Name (Dim)	Description

(74)	FULLWORD	4	TCL_TIMES_AT_PURGE_THRESHOLD	No. of times at purge threshold limit
(78)	CHARACTER	8	TCL_TOTAL_QUEUING_TIME	Time spent waiting by those that WERE queued
(80)	CHARACTER	*	*	Round to dword

## XMRLC Transaction manager resource lock element

-

DFHXMRLC - Resource Lock Control Blocks

Callers of the resource locking services must include both the resource lock element and the resource lock token control blocks.

-

Resource Lock Token

Each resource to be locked must have a double word "lock token" associated with it. The lock token must be initialised to nulls and consists of the head of the RLE chain plus an indication of the owner of the lock. If the definition is not locked then the 'owner' field will be blank.

The token must be defined on a word boundary.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	8	RESOURCE_LOCK_TOKEN	
(0)	ADDRESS	4	RESOURCE_LOCK_WAITERS	Waiting lock elements
(4)	BITSTRING	4	RESOURCE_LOCK_OWNER	Identity of lock owner

--

-

Resource Lock Element

The Resource Lock Element describes a single waiter in a queue of tasks waiting to obtain exclusive access to a particular resource. The head of the queue is addressed from the resource lock token associated with that resource.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	17	RLE	
(0)	CHARACTER	4	RLE_EYECATCHER	>RLE as eyecatcher
(4)	ADDRESS	4	RLE_RESOURCE	Addr of resource waiting on
(8)	ADDRESS	4	RLE_NEXT	Next waiter in chain
(C)	BITSTRING	4	RLE_SUSPEND_TOKEN	DS suspend/resume token
(10)	BITSTRING	1	RLE_FLAGS	Various flags
	1... ..		RLE_RESUMER	Responsibility for resume
	.111 1111		*	Reserved

## XXMBC Transaction manager tran. browse element

Transaction Browse  
 This control block defines the transaction browse element used to browse transactions and transaction tokens.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	32	XM_XB	
(0)	CHARACTER	16	*	prefix
(0)	HALFWORD	2	XM_XB_LENGTH	inclusive length

(3)	CHARACTER	3	TXDSTAT_DFH	DFH
(6)	CHARACTER	2	TXDSTAT_DOMID	Domain-id
(8)	CHARACTER	8	TXDSTAT_BLOCK_NAME	"TXDSTAT " as eyecatcher
(10)	CHARACTER	4	TXDSTAT_TRANSACTION_ID	Transaction id
(14)	ADDRESS	4	TXDSTAT_LATEST_INSTANCE	The last instance created for this definition
(18)	ADDRESS	4	TXDSTAT_NEXT_STATIC_BLOCK	Next static block in chain
(1C)	FULLWORD	4	TXDSTAT_USE_COUNT	No. of references to this
(20)	BITSTRING	1	TXDSTAT_STATUS_FLAGS	Various status flags
	1... ..		TXDSTAT_ACTIVE	Definition is active and not quiescing
	.1.. ..		TXDSTAT_REMOTE_DIR_X	Defn. has entry in RTXD Dir
	..1. ....		TXDSTAT_SYSTEM_DEFINITION	Added by the system
	...1 1111		*	Reserved
(21)	CHARACTER	3	*	Reserved
(24)	ADDRESS	4	TXDSTAT_REMOTE_DIR_PREV	Prev defn with same remote name and system
(28)	ADDRESS	4	TXDSTAT_REMOTE_DIR_NEXT	Next defn with same remote name and system
(2C)	CHARACTER	8	TXDSTAT_LOCK_TOKEN	Update lock token
(34)	CHARACTER	12	*	Reserved
(40)	CHARACTER	60	TXDSTAT_TRANDEF_STATS	Stats per installed transid
(40)	BITSTRING	8	TXDSTAT_CREATION_TIME	STCK when 1st created
(48)	UNSIGNED	4	TXDSTAT_ATTACH_COUNT	Number of attaches
(4C)	UNSIGNED	4	TXDSTAT_RESTART_COUNT	Number of restarts
(50)	UNSIGNED	4	TXDSTAT_STG_VIOLATIONS	Storage violations suffered
(54)	UNSIGNED	4	TXDSTAT_DYN_LOCAL_COUNT	Dynamic txn local runs
(58)	UNSIGNED	4	TXDSTAT_DYN_REMOTE_COUNT	Dynamic txn remote runs
(5C)	UNSIGNED	4	TXDSTAT_REMOTE_START_COUNT	No. of remote starts of txn
(60)	UNSIGNED	4	TXDSTAT_FORCED_ACTN_NOWAIT	No ability to wait
(64)	UNSIGNED	4	TXDSTAT_FORCED_ACTN_OPERATOR	Forced by operator
(68)	UNSIGNED	4	TXDSTAT_FORCED_ACTN_TIMEOUT	Forced after timeout

Offset Hex	Type	Len	Name (Dim)	Description
(6C)	UNSIGNED	4	TXDSTAT_FORCED_ACTN_TRANDEF	Decision in trandef taken
(70)	UNSIGNED	4	TXDSTAT_FORCED_ACTN_OTHER	Forced for other reason
(74)	UNSIGNED	4	TXDSTAT_INDOUBT_WAIT_COUNT	Number of indoubt waits
(78)	UNSIGNED	4	TXDSTAT_ACTION_MISMATCHES	Mismatch trandef decision
(7C)	ADDRESS	4	TXDSTAT_TPNAME_ADDR	Addr of TPName if active
(80)	CHARACTER	4	*	Reserved
(84)	CHARACTER	16	TXDSTAT_ALIASES	
(84)	BITSTRING	1	TXDSTAT_ALIAS_EXISTENCE_BITS	Aliases that are active
			TXDSTAT_ALIAS_X	Alias is active
			TXDSTAT_TASKREQ_X	Taskreq is active
			TXDSTAT_XTRANID_X	XTranid is active
			TXDSTAT_TPNAME_X	TPName is active
			*	Reserved
(85)	CHARACTER	3	*	Reserved
(88)	CHARACTER	4	TXDSTAT_ALIAS	Alias transid if active
(8C)	CHARACTER	4	TXDSTAT_TASKREQ	Taskreq transid if active
(90)	CHARACTER	4	TXDSTAT_XTRANID	Xtranid transid if active
(94)	CHARACTER	20	TXDSTAT_TCB_COUNTS	TCB count information
(94)	UNSIGNED	4	TXDSTAT_NEXT_DECAY	triggers next decay
(98)	CHARACTER	8	TXDSTAT_TOTAL_COUNTS	Current running totals
(98)	UNSIGNED	4	TXDSTAT_TOT_ATTACHES	no. of tran attaches
(9C)	UNSIGNED	4	TXDSTAT_TOT_TCB_COUNTS (1)	counts for TCB types
(A0)	CHARACTER	8	TXDSTAT_INTERVAL_COUNTS	Current interval counts
(A0)	UNSIGNED	4	TXDSTAT_INT_ATTACHES	no. of tran attaches
(A4)	UNSIGNED	4	TXDSTAT_INT_TCB_COUNTS (1)	counts for TCB types
(A8)	CHARACTER		*	Round to dword

### Constants

Len	Type	Value	Name	Description
1	DECIMAL	3	NUM_OPEN_TYPES	Number of types of open TCB which can inherit subspaces (ie DSIT_INHERIT_YES).
1	DECIMAL	1	NUM_SUBSPACE_OPEN_TYPES	Number of combinations of types of open TCB which can inherit subspaces (ie DSIT_INHERIT_YES). This number is 2 to the power NUM_SUBSPACE_OPEN_TYPES.
4	DECIMAL	2	COMBO_SUBSPACE_OPEN_TYPES	

## MXMNC Transaction manager transaction

Transaction  
 This control block defines the transaction storage for the  
 Transaction Manager domain.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	352	XM_TXN	
(0)	CHARACTER	16	*	prefix
(0)	HALFWORD	2	XM_TXN_LENGTH	inclusive length

(10)	UNSIGNED	1	XM_TXN_FACILITY_TYPE	facility type
(11)	UNSIGNED	1	XM_TXN_START_CODE	start code
(12)	UNSIGNED	1	XM_TXN_TASK_PRIORITY	task priority
(13)	BITSTRING	1	XM_TXN_FLAGS	flags
	1... ....		XM_TXN_INFINITE_WAIT	transaction in infinite wait
	.1.. ....		XM_TXN_PRIORITY_SET	priority has been set
	..1. ....		XM_TXN_INIT_PURGE_PROTECT	protected from purge during attach phase 2
	...1 ....		XM_TXN_TERM_PURGE_PROTECT	protected from purge during detach
	.... 1...		XM_TXN_CREATED_BY_ATTACH	created by attach rather than get txn environment
	.... .1..		XM_TXN_TCLASS	txn has a related tclass
	.... ..1.		XM_TXN_TCLASS_LOCKED	txn has a tclass locked
	.... ...1		XM_TXN_INSUFF_STG_MSG_ISSUED	Attach failed msg issued
(14)	UNSIGNED	2	XM_TXN_BROWSE_COUNT	# of txn browses in progress
(16)	UNSIGNED	1	XM_TXN_ATTACH_MESSAGE	attach failure message
(17)	BITSTRING	1	XM_TXN_FLAGS2	flags
	1... ....		XM_TXN_DEFERRED_ABEND_TXN_DUMP	take a transaction dump on deferred abend
	.1.. ....		XM_TXN_FORCE_PURGE_ISSUED	force purge issued against this transaction
	..1. ....		XM_TXN_PROHIBIT_INLINE_CALLS	Force inline sets to make full domain calls
	...1 ....		XM_TXN_DEFERRED_ABEND_SET	A deferred abend has been set
	.... 1...		XM_TXN_DEFERRED_MESSAGE_SET	A deferred message has been set
	.... .1..		XM_TXN_GROUP_ID_INHERITED	tran group id inherited
	.... ..1.		XM_TXN_UOW_ID_SUPPLIED	transaction is to be attached with an inherited external unit of work id
	.... ...1		XM_TXN_REPORT_CONDITION	APAC to be invoked after transaction abend
(18)	ADDRESS	4	XM_TXN_FACILITY_TOKEN	principal_facility_address
(1C)	CHARACTER	8	XM_TXN_PRIMARY_CLIENT_REQUEST_BLOCK	request block
(1C)	ADDRESS	4	XM_TXN_PRIMARY_CLIENT_REQUEST_BLOCK_ADDR	address of primary client's block
(20)	FULLWORD	4	XM_TXN_PRIMARY_CLIENT_REQUEST_BLOCK_LEN	length of primary client's block
(24)	ADDRESS	4	XM_TXN_ATTACH_PARMS_ADDR	attach parms address

Offset Hex	Type	Len	Name (Dim)	Description
(28)	FULLWORD	4	XM_TXN_ATTACH_PARDS_LENGTH	attach pards length
(2C)	CHARACTER	8	XM_TXN_REMOTE_NAME	remote name if applic
(34)	CHARACTER	4	XM_TXN_REMOTE_SYSTEM	remote system if applic
(38)	CHARACTER	8	XM_TXN_TRANSACTION_TOKEN	transaction token
(38)	ADDRESS	4	XM_TXN_TRANSACTION_ADDR	address of transaction
(3C)	CHARACTER	4	XM_TXN_TRANNUM	transaction number
(40)	ADDRESS	4	XM_TXN_NEXT_TRANSACTION	next transaction in chain
(44)	ADDRESS	4	XM_TXN_PREV_TRANSACTION	previous transaction in chain
(48)	CHARACTER	4	XM_TXN_ORIGINAL_TRANSACTION_ID	original tran. id.
(4C)	CHARACTER	4	*	reserved
(50)	CHARACTER	32	*	task scheduling state
(50)	CHARACTER	8	XM_TXN_ATTACH_TIME	XM attach time
(58)	CHARACTER	8	XM_TXN_TCLASS_WAIT_START	time TCLASS wait started
(58)	CHARACTER	8	XM_TXN_TCLASS_WAIT_TIME	time waited for TCLASS
(60)	CHARACTER	8	XM_TXN_MXT_WAIT_START	time max. task wait started
(60)	CHARACTER	8	XM_TXN_MXT_WAIT_TIME	time waited for max. task
(68)	UNSIGNED	1	XM_TXN_SCHEDULE_STAGE	stage which schedule is at reserved
(69)	CHARACTER	3	*	reserved
(6C)	ADDRESS	4	XM_TXN_DS_TASK_TOKEN	Dispatcher task token
(70)	CHARACTER	4	XM_TXN_PRIMARY_TRANSACTION_ID	primary tran. id.
(74)	CHARACTER	4	XM_TXN_ABEND_CODE	abend code
(78)	UNSIGNED	1	XM_TXN_ABEND_IN_PROGRESS	abend in progress
(79)	UNSIGNED	1	XM_TXN_SYSTEM_TRANSACTION	system transaction
(7A)	UNSIGNED	2	XM_TXN_RESTART_COUNT	restart count
(7C)	CHARACTER	4	XM_TXN_RE_ATTACHED_UOW_TOKEN	UOW token passed by RM domain for re-attached txn resulting from an unshunt
(80)	CHARACTER	8	XM_TXN_TRANDEF_TOKEN	trandef token

The tokens in the XM\_TXN are only ever referenced using the XMIQ set\_Transaction\_token and inquire\_transaction\_token interface. The following overlay field definitions are included only so that these fields are easily recognised in the data areas. The order of the tokens must reflect the order of the token owners defined in the CDURUN definition in DFHXMIQR e.g. xm\_txn\_ap\_token refers to the token indexed by xmiq\_ap.

(88)	CHARACTER	120	*	
(88)	CHARACTER	8	XM_TXN_TOKEN (15)	tokens
(88)	CHARACTER	120	*	
(88)	CHARACTER	8	XM_TXN_AP_TOKEN

Null value for xm_txn_deferred_abend				

Len	Type	Value	Name	Description
4	CHARACTER		XM_TXN_NULL_ DEFERRED_ABEND	
declare xm_txn_null_token char(8) constant('0000000000000000'); The following constant must be used until all the users of DFHXMCON are converted to PL/X				
4	DECIMAL	0	XM_TXN_NULL_TOKEN	
4	DECIMAL	15	XM_TXN_TOKEN_OWNERS	

## XSANC Security domain anchor block

-

Define the XS Domain declarations. This step produces the "DFHXSANC COPY" file, for general use by the domain. This copybook also contains constants required by all the modules in the domain.

Note that this copy file will be used in other routines, for example DFHXSTR1 for trace interpretation.

Because this file uses the user-defined types declared in "DFHXSTYP COPY", all programs that include this file must also include "DFHXSTYP".

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	64	XSA	XS domain anchor block
(0)	CHARACTER	16	XSA_PREFIX	===> eyecatcher <===
(0)	HALFWORD	2	XSA_PREFIX_LENGTH	length of xsa
(2)	CHARACTER	14	XSA_PREFIX_TEXT	>DFHXSANCHOR
(10)	UNSIGNED	1	XSA_XS_STATE	XS domain state initialised, quiesce or terminated
(11)	BITSTRING	1	*	reserved for flags
(12)	CHARACTER	2	XSA_CICS_SVC	The CICS type-3 SVC
(12)	UNSIGNED	1	XSA_CICS_SVC_OPCODE	SVC operation code
(13)	UNSIGNED	1	XSA_CICS_SVC_NUMBER	SVC number from kernel
(14)	ADDRESS	4	XSA_AUTHORIZED_BLOCK_POINTER	
(18)	CHARACTER	4	XSA_APPC_SEED	The key-zero portion of the XS state "Random Number" seed for XSLU APPC Functions

Here we define the subpool tokens representing the various storage manager subpools acquired for the Security Domain.

(1C)	STRUCTURE IsA(ETOKEN)	8	XSA_SPTOKEN_GENERAL	General use subpool, including the XS anchor
(1C)	ADDRESS	4	P	
(20)	FULLWORD	4	N	
(24)	STRUCTURE IsA(ETOKEN)	8	XSA_XSXM_POOL	Quickcell pool for XSXM
(24)	ADDRESS	4	P	
(28)	FULLWORD	4	N	

Here we define the lock tokens representing the various locks obtained from the Lock Manager and used by the Security Domain.

(2C)	ADDRESS	4	XSA_DOMAIN_LOCK_TOKEN	XS domain lock token
(30)	ADDRESS	4	XSA_RESCHECK_LOCK_TOKEN	Resource check lock
(34)	ADDRESS	4	XSA_REBUILD_LOCK_TOKEN	Security Rebuild lock
(38)	ADDRESS	4	XSA_EXTRACT_LOCK_TOKEN	Security Extract lock

Offset Hex	Type	Len	Name (Dim)	Description
--				
(40)	CHARACTER	*		Reserved This is for double word boundary alignment. End of XS anchor block

APPCLU Filter String

We supply the ESM with a filter so that only those profiles relevant to our CICS Region's VTAM netid and local LUName are brought into storage.

This filter is built after CICS opens the VTAM ACB, which may occur a long time after CICS has initialised.

The filter is built with a 2 byte length prefix to meet the requirements of the ESM.

This filter is only built if the SIT specified XAPPC=YES.

(40)	CHARACTER	24	XSSS_APPCLU_FILTER	Used in RACLIST processing
(40)	HALFWORD	2	XSSS_APPCLU_FILTER_LENGTH	actual length of string
(42)	CHARACTER	22	XSSS_APPCLU_FILTER_STRING	= netid.local_luname.*

Security Directory entry

The following is an entry in the Security Domain's directory. It is located from a Security\_Token by using BPQSH2 Building Block that is anchored in "xsss\_directory\_ptr." Note that, to save storage, "xsgi\_applid" is only present if its existence bit ("xsgi\_applid\_x") is set.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	40	XSDI_SECURITY_ENTRY	Security Entry
(0)	HALFWORD	2	XSDI_LENGTH	Length of entry
(2)	BITSTRING	1	XSDI_FLAGS	Flag byte
			*	Reserved
			XSDI_APPLID_X	Applid is present
			*	Reserved
(3)	STRUCTURE	11	XSDI_USERID	Owning userid
	IsA(USERID)			
(3)	UNSIGNED	1	LEN	
(4)	CHARACTER	10	VAL	
(E)	BITSTRING	1	*	Reserved for alignment

Offset Hex	Type	Len	Name (Dim)	Description
(F)	STRUCTURE IsA(ENTRY_PORT)	9	XSDI_ENTRY_PORT	Associated Port-of-Entry
(F)	UNSIGNED	1	TYPE	
(10)	CHARACTER	8	NAME	
(18)	ADDRESS	4	XSDI_ACEE_PTR	Address of ACEE
(1C)	UNSIGNED	4	*	Reserved
(20)	CHARACTER	8	XSDI_APPLID	(Optional) applid

## Constants

Len	Type	Value	Name	Description
1	DECIMAL	1	XSSV_V321	Version 3.2.1
1	DECIMAL	2	XSSV_V410	Version 4.1.0
1	DECIMAL	2	XSSV_VERSION_NUM	Current version

The following constant defines the length of the flattened security data block. This length must be the same as that defined in DFHXSSA. If it is not, DFHXSSA will not compile.

1	DECIMAL	48	XSSV_FLATTENED_SECURITY_LENGTH	
---	---------	----	--------------------------------	--

## XSXD Security domain transaction data

-

There is one such structure for every transaction.

The structure contains the three types of facility token expressed first as a three-element array, and then as individually named tokens. All the unique instances of these tokens are kept in another three element array.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	56	XSXD_TRANSACTION_DATA	
(0)	CHARACTER	24	*	
(0)	CHARACTER	8	XSXD_FACILITY_TOKEN (3)	
(0)	ADDRESS	4	P	
(4)	FULLWORD	4	N	
(0)	CHARACTER	24	*	
(0)	CHARACTER	8	XSXD_PRINCIPAL_TOKEN	
(0)	ADDRESS	4	P	
(4)	FULLWORD	4	N	
(8)	CHARACTER	8	XSXD_SESSION_TOKEN	
(8)	ADDRESS	4	P	
(C)	FULLWORD	4	N	
(10)	CHARACTER	8	XSXD_EDF_TOKEN	
(10)	ADDRESS	4	P	
(14)	FULLWORD	4	N	
(18)	CHARACTER	24	XSXD_UNIQUE_TOKEN_LIST	
(18)	CHARACTER	8	XSXD_UNIQUE_TOKEN (3)	
(18)	ADDRESS	4	P	
(1C)	FULLWORD	4	N	

We also include a double-word communication area, which is intended for communication between the early-verification phase of the signon function and the normal verification phase, entered during ADD\_ USER security processing. This double-word is only used by non-RACF external security managers, and is never used by CICS.

(30)	BITSTRING	8	XSXD_COMMUNICATION_AREA	
------	-----------	---	-------------------------	--

## XSXT Security domain transaction token

This structure defines the format of the Security Domain transaction token that is preserved by the Transaction Manager. There is one such token for each transaction.

The transaction token consists of two fullwords. The first fullword is the address of the transaction data. The second fullword contains a 16-bit stack of transaction options, that is, eight pairs of RESSEC and CMDSEC options. The topmost pair represent the current RESSEC and CMDSEC. The low-order 16 bits are reserved for a count of the stack depth, but it is not currently used.

Offset Hex	Type	Len	Name (Dim)	Description
(0)	STRUCTURE	8	XSXT_TRAN_TOKEN	XS Transaction token
(0)	ADDRESS	4	XSXT_TRAN_DATA_PTR	Ptr to transaction data
(4)	BITSTRING	2	XSXT_STACK	Stack of RESSEC/CMDSEC
(4)	BITSTRING	1	XSXT_STACK_1	First byte of stack
			XSXT_RESSEC	Current RESSEC value
			XSXT_CMDSEC	Current CMDSEC value
(5)	BITSTRING	1	XSXT_STACK_2	Second byte of stack
(6)	HALFWORD	2	XSXT_COUNT	Not used

## ZCQ Builder services action blocks

CONTROL BLOCK NAME = DFHTBSGC  
 DESCRIPTIVE NAME = CICS Table Builder Services Action Blocks  
 FUNCTION =  
 DFHTBSGC describes the dsect for Builder Services Action Blocks. These blocks are arrays of elements that describe the actions taken to Install , Delete, Recover or Catalog communication resource definitions.  
 BS Action Blocks are hung of either the Resource definition Recovery Anchor Block (RRAB) (for those that either relate to general resources or have been moved onto the delayed\_action\_list prior to commitment/rollback), or from a Resource definition Atom Block (RABN) (because they are for a named atom).  
 They are created by Table Builder Services when a request starts and are filled and/or added to the chain when Builder modules are driven. The log record that relates to a particular builders activity is chained from the relevant action element.  
 The Table Builder Services Syncpoint program DFHTBSS frees the action\_blocks once they have been used at the end of the Builder Services Request (often at Syncpoint)  
 LIFETIME =  
 For the duration of the Table Builder Services Request  
 STORAGE CLASS =  
 Above 16M line. CICS key.  
 LOCATION =  
 Chained from the RRAB or one of the RABNs on the RRABs chain of named atoms.  
 INNER CONTROL BLOCKS = None  
 NOTES :  
 DEPENDENCIES = S/370  
 RESTRICTIONS = None  
 MODULE TYPE = Control block definition

Offset Hex	Type	Len	Name (Dim)	Description

## **Sending your comments to IBM**

**CICS® Transaction Server for OS/390®**

**CICS Supplementary Data Areas**

**LY33-6090-02**

If you want to send to IBM any comments you have about this book, please use one of the methods listed below. Feel free to comment on anything you regard as a specific error or omission in the subject matter, and on the clarity, organization or completeness of the book itself.

To request additional publications, or to ask questions or make comments about the functions of IBM products or systems, you should talk to your IBM representative or to your IBM authorized remarketer.

When you send comments to IBM, you grant IBM a nonexclusive right to use or distribute your comments in any way it believes appropriate, without incurring any obligation to you.

You can send your comments to IBM in any of the following ways:

- By mail:
  - IBM UK Laboratories
  - Information Development
  - Mail Point 095
  - Hursley Park
  - Winchester, SO21 2JN
  - England
- By fax:
  - From outside the U.K., after your international access code use 44 1962 870229
  - From within the U.K., use 01962 870229
- Electronically, use the appropriate network ID:
  - IBM Mail Exchange: GBIBM2Q9 at IBMMAIL
  - IBMLink: HURSLEY(IDRCF)
  - Email: idrcf@hursley.ibm.com

Whichever method you use, ensure that you include:

- The publication number and title
- The page number or topic to which your comment applies
- Your name and address/telephone number/fax number/network ID.
