

Mobile monitoring for Sterling Control Center

IBM Sterling Control Center Mobile

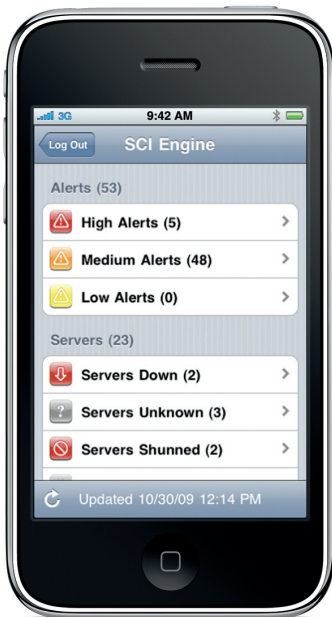

Benefits

- Increased status monitoring while on the go
- Increased ability to respond quickly to critical exceptions
- Increased employee productivity and responsiveness

Required solution

- IBM® Sterling Control Center

Sterling Control Center Mobile

IBM® Sterling Control Center Mobile

For users of Sterling Control Center, this mobile application provides more choice in how system administrators access and respond to targeted environment status, including file transfer status.

Free yourself from your computer, keep an eye on status on-the-go

Today's systems, processes and monitoring do not stop because you need to go to lunch, a meeting, or home for the weekend. Today's mobile work place requires access to key systems regardless of where you are. Sterling Control Center Mobile extends the

visibility of the Sterling Control Center service level monitoring console to mobile digital devices, allowing key personnel to have notifications for targeted environment health without having to sit in front of a computer.

Increase monitoring flexibility, respond quickly to exceptions

Sterling Control Center Mobile enables a system administrator or application owner to determine if there are any environment, process or transfer issues that could impact a key business process. It then gives them the flexibility, from their mobile digital device, to access the nature of the issue and handle it as needed.

Capability	Description
Status dashboard	<ul style="list-style-type: none"> • Summary views for server status, adapter status and alerts with on demand refresh
