Index

Getting Started

Overview

Welcome to Gentran:Basic® for zSeries Release 6.4!

Gentran:Basic provides you with the flexibility, efficiency, and thoroughness necessary to meet your most demanding requirements.

This Installation Guide assists you with installing Gentran:Basic or in converting from Gentran:Basic Release 6.0, 6.1, 6.2, or 6.3 to the current release.

Note: If you are using a release of Gentran:Basic earlier than Release 6.0, please contact the Gentran Software Support Center for information on converting your Gentran:Basic system to Release 6.4.

If you have purchased Gentran:Basic add-on products, you must first install Gentran:Basic. After installing Gentran:Basic, verifying correct setup, and configuring the system to meet the needs of your environment, you can install any additional Gentran products, in any order, at any time.

Note: If you use Gentran:Realtime® as a stand-alone product, you do not need to install Gentran:Basic.

This chapter contains the following topics.

Related Documentation	1-2
Using this Guide	1-2

Related Documentation

The following guides contain additional information related to Gentran:Basic for zSeries Release 6.4.

- *Gentran for zSeries Release 6.4 Release Notes*
Contains information about the changes and enhancements made in Gentran for zSeries Release 6.4, as well as information about the impact this release will have on your operations. The “Impact” section includes such information as file conversions, JCL changes, and CICS table entry changes.
- *Gentran:Basic for zSeries Release 6.4 User’s Guide*
Contains reference information, such as field and function key descriptions, about the online screens.
- *Gentran:Basic for zSeries Release 6.4 Technical Reference Guide*
Contains detailed reference information on batch programs and file descriptions.
- *Gentran:Basic for zSeries Release 6.4 System Message Guide*
Contains information on the specific Gentran:Basic system messages.

Using this Guide

Follow the directions in this guide sequentially by chapter. We have provided space for you to track each step that you complete during the installation.

Completing the Pre-installation Worksheet

Overview

This chapter contains an overview of the installation path and a worksheet that you need to complete before you begin to install Gentran:Basic.

The worksheet should be completed by someone who is familiar with the requirements of your organization, as well as your organization's data processing naming and standards conventions.

Decisions made while completing the worksheet directly affect how various portions of Gentran:Basic are installed. In addition, key information that you enter on the checklist will be used to create the proper filenames and values during installation.

The Gentran:Basic default values provided on this worksheet are appropriate for most installations. If you have any doubt about the appropriate value to use for your installation, use the default value.

This chapter contains the following topics:

Topic	Page
Before Installation	2-2
Determining Your Installation Path	2-2
Instructions for New Gentran:Basic Users.....	2-4
Instructions for Existing Gentran:Basic Users.....	2-4
Pre-installation Worksheet.....	2-6

Before Installation

The section outlines the recommended installation steps for users new to Gentran:Basic and those users converting from Release 6.0, 6.1, 6.2, or 6.3.

Determining Your Installation Path

Before you proceed with the installation of Gentran:Basic for zSeries Release 6.4, you must determine your specific installation path. The installation path you will use depends on your current release of Gentran:Basic, the Trading Profile Mode you are currently using, and the Trading Profile Mode you intend to use for Release 6.4.

Note: Processing (or Trading Profile) modes you can use in Gentran are *Relationship mode*, *Partner/Qualifier mode*, and *Mixed mode*. If you are not familiar with these concepts, see Chapter 2 in the *Gentran:Basic for zSeries Release 6.4 User's Guide* for information about the differences between the modes.

Table 1, "Installation Path," details all of the possible combinations of existing Gentran environments and the corresponding tasks required for installation. Find your specific situation and perform the tasks listed. This is your installation path.

Table 2, "Installation Path Table Legend," provides references to procedures in the following chapters for each of the possible environments.

Installation Path Table

Table 1: Installation Path

Current Gentran Release	Current Trading Profile Mode	Target Release 6.4 Trading Profile Mode	Gentran:Basic Installation Paths					
			Step 1	Step 2	Step 3	Step 4	Step 5	Step 6
None None	None None	P/Q Relationship	Install P/Q Install Rel	Verify P/Q Verify Rel	Implement Implement			
6.0 6.0	P/Q P/Q	P/Q Relationship	Install P/Q Install P/Q	Verify P/Q Verify P/Q	Convert Convert	Implement Migrate	Allocate	Implement
6.0 6.0	Relationship Relationship	Mixed Relationship	Install Mix Install P/Q	Verify Mix Verify P/Q	Convert Convert	Implement Migrate	Implement	
6.1, 6.2, or 6.3 6.1, 6.2, or 6.3	P/Q P/Q	P/Q Relationship	Install P/Q Install P/Q	Verify P/Q Verify P/Q	Convert Convert	Implement Migrate	Allocate	Implement
6.1, 6.2, or 6.3 6.1, 6.2, or 6.3	Mixed Mixed	Mixed Relationship	Install Mix Install Mix	Verify Mix Verify Mix	Convert Convert	Implement Migrate	Implement	
6.1, 6.2, or 6.3	Relationship	Relationship	Install Rel	Verify Rel	Convert	Implement		
Prior to 6.0	Contact the Gentran Software Product Support Center							
NOTE: Any combinations not listed are <i>not</i> supported								

Table 2: Installation Path Table Legend

Instruction	Description
Install P/Q	Complete the steps in Chapter 3 of this guide, “Installing Gentran:Basic” using JCL member DEFBASE.
Install Mix	Complete the steps in Chapter 3 of this guide, “Installing Gentran:Basic” using JCL member DEFBASEM.
Install Rel	Complete the steps in Chapter 3 of this guide, “Installing Gentran:Basic” using JCL member DEFBASER.
Verify P/Q	Complete the steps in Chapter 4 of this guide, “Installation Verification for Partner/Qualifier Mode.”
Verify Mix	Complete the steps in Chapter 5 of this guide, “Installation Verification for Relationship and Mixed Modes.”
Verify Rel	Complete the steps in Chapter 5 of this Guide, “Installation Verification for Relationship and Mixed Modes.”
Convert	Complete the steps in Chapter 6 of this guide, “Converting to Release 6.4.”
Migrate	Complete the steps in Chapter 7 of this guide, “Migrating to Relationship Processing Mode.”
Allocate	Allocate new Gentran:Basic databank files.
Implement	Complete the steps in Chapter 8, Implementing Gentran:Basic, in this guide.

Instructions for New Gentran:Basic Users

Once you have completed and confirmed verification, you can proceed with implementing Gentran:Basic for zSeries Release 6.4 into your production processes regardless of whether you are using Partner/Qualifier mode or Relationship processing mode.

Instructions for Existing Gentran:Basic Users

Partner/Qualifier Mode Release 6.0 to Partner/Qualifier Mode Release 6.4

For the existing Gentran user who used Partner/Qualifier mode in Release 6.0 and who would like to continue using Partner/Qualifier mode, after the conversion process is complete, you can proceed with implementing Gentran:Basic for zSeries Release 6.4 into your production processes.

Partner/Qualifier Mode Release 6.0 to Relationship Mode in Release 6.4

For the existing Gentran user who used Partner/Qualifier mode in Release 6.0 and who would like to migrate to Relationship mode in Release 6.4, migration tools have been included to aid in that process. Databank migration is *not* supported. Therefore, databank information will have to be abandoned if switching from Partner/Qualifier mode in Release 6.0 to Relationship mode in Release 6.4.

Relationship Mode Release 6.0 to Mixed Mode Release 6.4

For the existing Gentran user who used Relationship mode in Release 6.0 and who does not desire to expand that usage to the partner profile, a Mixed mode is available in Release 6.4. The configuration process will take care of migrating your system configuration options. At the completion of your conversion, you can proceed with implementing Gentran:Basic for zSeries Release 6.4 into your production processes.

Relationship Mode Release 6.0 to Relationship Mode Release 6.4

For the existing Gentran user who used Relationship mode in Release 6.0 and who would like to expand that usage to include the partner profile, migration tools have been included to aid in that process. Release 6.4 supports complete or incremental migration. The migration is to be completed after converting your Release 6.0 files into Release 6.4 format.

Partner/Qualifier Mode Release 6.1, 6.2, or 6.3 to Partner/Qualifier Mode Release 6.4

For the existing Gentran user who used Partner/Qualifier mode in Release 6.1, Release 6.2, or Release 6.3 and who would like to continue using Partner/Qualifier mode, after the conversion process is complete, you can proceed with implementing Gentran:Basic for zSeries Release 6.4 into your production processes.

Partner/Qualifier Mode Release 6.1, 6.2, or 6.3 to Relationship Mode in Release 6.4

For the existing Gentran user who used Partner/Qualifier mode in Release 6.1, Release 6.2, or Release 6.3 and who would like to migrate to Relationship mode in Release 6.4, migration tools have been included to aid in that process. Databank migration is *not* supported. Therefore, databank information will have to be abandoned if switching from Partner/Qualifier mode in Release 6.1, Release 6.2, or Release 6.3 to Relationship mode in Release 6.4.

Mixed Mode Release 6.1, 6.2, or 6.3 to Mixed Mode Release 6.4

For the existing Gentran user who used the Mixed mode in Release 6.1, Release 6.2, or Release 6.3 and who does not desire to expand that usage to the partner profile, a Mixed mode is available in Release 6.4. The configuration process will take care of migrating your system configuration options. At the completion of your conversion, you can proceed with implementing Gentran:Basic for zSeries Release 6.4 into your production processes.

Mixed Mode Release 6.1, 6.2, or 6.3 to Relationship Mode Release 6.4

For the existing Gentran user who used the Mixed mode in Release 6.1, Release 6.2, or Release 6.3 and who would like to expand that usage to include the partner profile, migration tools have been included to aid in that process. Release 6.4 supports complete or incremental migration. The migration is to be completed after converting your Release 6.1, Release 6.2, or Release 6.3 files into Release 6.4 format.

Relationship Mode Release 6.1, 6.2, or 6.3 to Relationship Mode Release 6.4

For the existing Gentran user who used Relationship mode in Release 6.1, Release 6.2, or Release 6.3 and who would like to continue using Relationship mode, after the conversion process is complete, you can proceed with implementing Gentran:Basic for zSeries Release 6.4 into your production processes.

Pre-installation Worksheet

Complete this worksheet before you begin to install Gentran:Basic.

Pre-installation Worksheet	
<p>System Image</p> <p>This 3-character alphanumeric value is used to uniquely identify your Gentran:Basic online system. We recommend that you use “EDI” when possible. However, you can select any value you wish. See Appendix C in this guide for a complete description of system image.</p>	<p>Default: SIM Your Value: _____</p>
<p>Program Image</p> <p>This 3-character alphanumeric value is used to uniquely identify the programs and mapsets for your Gentran:Basic online system. We recommend that you use “EDI” when possible. If you do not use the recommended value of “EDI,” we recommend that you use the same value that you used for your system image. However, you can select any value you wish. See Appendix C in this guide for a complete description of program image.</p>	<p>Default: PIM Your Value: _____</p>
<p>High-Level Qualifier for Data Set Names</p> <p>The installation process creates many data sets that are used to generate the Gentran:Basic system. All data set names begin with the Qualifier, GENTRAN.V6X4. Change the Qualifier to meet your requirements. See Appendix D in this guide for a complete description of Gentran:Basic files.</p>	<p>Default: GENTRAN.V6X4 Your Value: _____</p>
<p>CICS Group Name</p> <p>This 8-character alphanumeric value is used when establishing the online environment during the installation of Gentran:Basic. CICS resources are stored in the CICS System Definition (CSD) file using this group name. We recommend that you use “GENBSC” when possible. However, you can select any value you wish.</p>	<p>Default: GENBSC Your Value: _____</p>
<p>External Security Systems</p> <p>After you have determined the system image and high-level qualifier for the data set names, review any external security system parameters (such as RACF and ACF2) to ensure that the correct transactions, programs, and data sets can be accessed by the appropriate personnel.</p> <p>Note: There is no parameter within Gentran:Basic that defines your external security system, but you must identify Gentran:Basic resources to your security system.</p> <p>There is a CICS transaction (SIMD, where SIM is the system image, from above) that runs in the background. Your CICS administrator can determine whether special security setup considerations in your RACF and ACF2 parameters are required to access the Gentran:Basic files.</p>	<p>Default: N/A Your Value: _____</p>

Pre-installation Worksheet

Trading Profile Mode

Default: P

Your Value: _____

The trading profile mode identifies how trading partner key information is stored on the partner profile and in the databanks.

Valid values are:

P = Partner ID and Qualifier

Data is stored on the databank based on the trading partner ID. This is the receiver for outbound processing and the sender for inbound processing.

R = Relationship

The partner profile and data on the databank are stored by the Relationship key. This Relationship key is a combination of the *user* and *partner*.

M = Mixed

Data is stored on the databank by a key, based on a combination of user and partner. The *user* is an internal department or division within your organization. The *partner* is a combination of sender/receiver for outbound processing and receiver/sender for inbound processing. Use this option only in multi-divisional organizations where multiple divisions trade with the same trading partner. The partner profile is maintained under the Partner/Qualifier key structure.

Security Exit Program Name

Default: N/A

Your Value: _____

On the Gentran:Basic logon screen, you need to type a User ID and password to access the system. However, you can write a security exit program to interface with external security systems (such as ACF2 and RACF) to allow a user to automatically bypass entering a User ID and password.

After writing the program, you can install the program following the installation verification.

See Appendix E in this guide for a complete description of the Security Exit.

Security Password Minimum Length

Default: 04

Your Value: _____

The password length can be from 01 to 08 bytes. Use this feature to meet your installation requirements.

Security Password Suppress

Default: Y

Your Value: _____

This option controls how security passwords in the Security Maintenance online system are displayed.

Valid values are:

Y = Always hide password.

N = Display password on Security Maintenance (EDIM201) screen for users with Level 1 security authorization.

See Chapter 5, Administration Subsystem, in the *Gentran:Basic for zSeries Release 6.4 User's Guide* for information about security authorization.

Pre-installation Worksheet	
<p>User Jump Table Name</p> <p>You can apply an optional Assembler table that enables you to define your own jump code values. During conversion, the name of the default Assembler table, EDIJUMP, will display. You can accept the default name or change the name, as you deem appropriate. Then, in the configuration file, you can add an entry to your CICS resource definitions for the name you chose for the Assembler table. See Member EDIJUMP in GENTRAN.V6X4.UTILITY.SOURCE for Jump Code Table instructions.</p> <p>See the “Jump Codes” topic in Chapter 1, Getting Started, in the <i>Gentran:Basic for zSeries Release 6.4 User’s Guide</i> for more information.</p>	<p>Default: EDIJUMP Your Value: _____</p>
<p>Jump Code Display</p> <p>Using this option, you can configure your system to display either the numeric or alphabetic jump codes in the upper left corner of most Gentran:Basic screens.</p> <p>Valid values are:</p> <ul style="list-style-type: none"> space = Display numeric jump codes. 1 = Display numeric jump codes. 2 = Display alphabetic jump codes. <p>See the “Jump Codes” topic in Chapter 1, Getting Started, in the <i>Gentran:Basic for zSeries Release 6.4 User’s Guide</i> for more information.</p>	<p>Default: 1 Your Value: _____</p>
<p>Save Last Key Used</p> <p>When using jump codes, this option enables you to return to the previous record displayed.</p> <p>Valid values are:</p> <ul style="list-style-type: none"> 0 = Save key information. 1 = Do not save key information (the screen does not return to previous record displayed). 	<p>Default: 0 Your Value: _____</p>
<p>Century Year Value</p> <p>This option contains the median year used by Gentran:Basic to determine the first two positions of the four-position year. Dates with a year greater or equal to this value are considered 19xx dates. Dates with a year less than this value are considered 20xx dates.</p>	<p>Default: 50 Your Value: _____</p>
<p>Language Code</p> <p>This option determines the language in which error messages and descriptions are issued. Currently, only English is supported.</p>	<p>Default: EN Your Value: _____</p>
<p>Log Max Search</p> <p>This option specifies the maximum number of online log file entries to be read during a search for position criteria on the Online Log Display screen.</p>	<p>Default: 3000 Your Value: _____</p>

Pre-installation Worksheet

Multiple Envelope Enabled

Default: N

Your Value: _____

This option indicates whether or not the user has coded partner records using the Multiple Envelope field that is part of the key. This is to allow multiple envelope information to be coded on a single partner record.

Valid Values are:

- N = The program uses spaces in the Multiple Envelope ID always, whether a Multiple Envelope ID is provided or not.
- Y = The program attempts to read the partner record using the indicated envelope type (ISA, BG, UNB, etc.). If the partner record is not found, the program tries to read the partner record again using spaces for the Multiple Envelope ID.

Interchange Version

Default: N

Your Value: _____

This option determines whether to use the version as part of the key for partner interchange reads. If the record is not found with the version, the system attempts a second read using only the Partner ID Qualifier and Functional Group ID.

Valid values are:

- N = Do not use the version for the partner interchange reads.
- Y = Use the version to read the partner transaction records.

Group Version

Default: N

Your Value: _____

This option determines whether to use the version as part of the key for the partner group reads. When the version is in use and the record is not found with the version, the system attempts a second read using the same key except that the version is all spaces.

Valid values are:

- N = Do not use the version for the partner group reads.
- Y = Use the version to read the partner group records.

Transaction Version

Default: N

Your Value: _____

This option determines whether to use the version as part of the key for the partner group reads. When the version is in use and the record is not found with the version, the system attempts a second read using the same key except that the version is all spaces.

Valid values are:

- N = Do not use the version for the partner transaction reads.
- Y = Use the version to read the partner transaction records.

Pre-installation Worksheet	
<p>Concurrency Enabled</p> <p>This option determines whether to enable concurrent processing for the editors and mappers and databank maintenance.</p> <p>Valid values are:</p> <p style="margin-left: 20px;">N = Do not enable concurrent processing.</p> <p style="margin-left: 20px;">Y = Enable concurrent processing.</p> <p>See Chapter 8, “Implementing Gentran:Basic,” in this guide for a complete description of concurrent processing.</p>	<p>Default: N</p> <p>Your Value: _____</p>
<p>CICS Applid for Concurrency</p> <p>A CICS region is required to support concurrent processing. If concurrent processing is enabled, this is the Applid of that CICS region.</p> <p>See Chapter 8, “Implementing Gentran:Basic,” in this guide for a complete description of concurrent processing.</p>	<p>Default: N/A</p> <p>Your Value: _____</p>
<p>User ID for Background Tasks</p> <p>This 8-character alphanumeric value identifies a User ID to be associated with background tasks that execute in the Gentran:Basic On-line system. Use this User ID when you need to ensure security control of these background tasks.</p> <p>For more information about this feature, see “Configuring JCL Submission and User Security,” in chapter 7, “System Features: Tips and Techniques,” in the <i>Gentran:Basic for zSeries Release 6.4 User’s Guide</i>.</p>	<p>Default: N/A</p> <p>Your Value: _____</p>
<p>Batch Submit Exit</p> <p>This 8-character alphanumeric value identifies a user-written program that will be invoked when submitting batch jobs from the Gentran:Basic On-line system. Use this exit when you need to submit jobs through a Scheduler system rather than through a CICS controlled internal reader.</p> <p>For more information about this feature, see “Configuring JCL Submission and User Security,” in chapter 7, “System Features: Tips and Techniques,” in the <i>Gentran:Basic for zSeries Release 6.4 User’s Guide</i>.</p>	<p>Default: N/A</p> <p>Your Value: _____</p>
<p>Change Audit</p> <p>This option determines whether to enable change audit processing for the Gentran:Basic Partner, Standards, Application Mapping, Transaction Mapping, Mapping Code Tables, Security, Error Message, System Configuration, Global Parameter, and Separator subsystems. Change audit processing can be independently enabled for each of these subsystems.</p> <p>Valid values are:</p> <p style="margin-left: 20px;">N = Do not enable change audit processing.</p> <p style="margin-left: 20px;">Y = Enable change audit processing.</p> <p>For more information about this feature, see “Change Audit in Gentran,” in chapter 7, “System Features: Tips and Techniques,” in the <i>Gentran:Basic for zSeries Release 6.4 User’s Guide</i>.</p>	<p>Default: N</p> <p>Your Value: _____</p>

Pre-installation Worksheet

Databanking Levels

Default: FFFF

Your Value: _____

For databanking levels, Gentran:Basic provides four parameters that indicate the level of information contained on each of the four databanks.

Valid values are:

- F** = Full databanking (Directory and Message store)
- D** = Directory only
- N** = None

The order of entry is as follows: Outbound Application, Outbound EDI, Inbound EDI, and Inbound Application.

Note: Gentran:Basic applies the default values, FFFF, for the databanking levels during installation. Because the verification procedure requires these default parameters, do not change them. During conversion, Gentran:Basic will modify the parameters so that they agree with your values. If you do not intend to use databanking, this value will become NNNN.

See Appendix A in this guide for a complete description of Databanking.

Databank Manager Transaction ID

Default: SIMD

Your Value: _____

The Databank Manager is a background CICS task represented by the Transaction ID SIMD. Modify the characters SIM of this Transaction ID to correspond with the value specified in the System Image field (above). The Databank Manager programs monitor the online updates that are performed on the databanks. They also perform maintenance on the transaction files affiliated with each of the databanks.

See Appendix A in this guide for a complete description of Databanking.

Databank Manager Scan Interval

Default: 0360

Your Value: _____

This is the time interval in seconds (0360 = 360 seconds or 6 minutes) between consecutive runs of the Databank Manager. At each interval, the Databank Manager's Transaction ID is restarted and its functions are performed. This process recurs until the CICS region is shut down.

See Appendix A in this guide for a complete description of Databanking.

Databank Error User Exit Program

Default: N/A

Your Value: _____

This field identifies a user-written CICS program that is retrieved when a fatal databank error occurs.

Databank Error User Exit Data

Default: N/A

Your Value: _____

This field identifies a user-defined, 20-character text string that is passed to the Databank Error User Exit Program.

Installing Gentran:Basic

Overview

This chapter describes the steps required to install Gentran:Basic. Review all the steps in this procedure before you perform the installation. After you have read this chapter, be sure to perform the steps in the order they are presented.

Note: If you have purchased Gentran:Realtime as a stand-alone product, you do not need to install Gentran:Basic.

If you have purchased Gentran:Basic add-on products, remember that you must *first* install Gentran:Basic.

This chapter contains the following topics:

Defining Permanent Sequential Unload/Upload Files	3-31
Defining the Change Audit Files	3-32
Defining Standards	3-33
Establishing the Online Environment	3-36
Overview	3-36
CICS Resource Definitions for Gentran:Basic Destinations	3-37
CICS Resource Definitions for Gentran:Basic Files	3-38
CICS Resource Definitions for Gentran:Basic Programs and Mapsets	3-39
CICS Resource Definitions for Gentran:Basic Transactions	3-40
Defining Gentran:Basic Resources in the CICS System Definition File	3-41
Renaming Gentran:Basic Programs and Mapsets	3-42
Updating the CICS Startup JCL	3-43
Installing the Gentran:Basic CICS Group	3-44
Verifying the Gentran:Basic CICS Installation	3-45

The Installation Process

Installing Gentran:Basic involves completing a series of dependent jobs that build individual subsystems. In the initial steps, you will unload files from either the Electronic Software Distribution (ESD) Portal or CD-ROMs and use them to build sequential files and partitioned data sets on your mainframe. In subsequent steps, you will run jobs on your mainframe that will use these sequential files and partitioned data sets to create and initialize Gentran:Basic system files.

Note: The person performing this installation should have a working knowledge of JCL, VSAM, and the CICS environment in which the software will be installed.

If you are installing from ESD, the installation package includes two files.

- The *product* file contains all the files necessary to install the programs and base files (excluding standards) for Gentran:Basic. Its name is:

Basic_6.4_Package.zip

- The *standards* file contains all of the files necessary to install the X12, TDCC, UCS, EDIFACT, ODETTE, and TRADACOMS EDI standards. Its name is:

Gentran_Standards_PkgMMYY.zip

The MMY component of the file name corresponds to the month and year that the standards file was created.

If you are installing from CD-ROM, the installation package includes two CD-ROMs.

- The *product* CD-ROM contains all the files necessary to install the programs and base files (excluding standards) for Gentran:Basic. Its label reads:

Gentran:Basic for zSeries Release 6.4 Product

- The *standards* CD-ROM contains all of the files necessary to install the X12, TDCC, UCS, EDIFACT, ODETTE, and TRADACOMS EDI standards. Its label reads:

Gentran:Basic Standards

Performing Initial Procedures

Use this procedure to install Gentran:Basic.

Step 1 Confirm system, hardware, and software requirements.

Typically performed by: System Installer

System Requirements

To install Gentran:Basic, you need the following:

- A personal computer running a Microsoft® Windows® operating system
- A CD-ROM drive, if you are installing from the CD-ROMs
- 750 MB of available hard disk space
- FTP capability

Hardware Requirements

Gentran:Basic operates on any IBM mainframe running the OS/390 or z/OS operating system.

Host System Disk Space Requirements:

Disk space requirements listed below are based on the use of IBM 3390 disk drives.

Component	Tracks Required
Batch Load Library	150
Online Load Library	300
System JCL Library	90
System Test Data	10
Utility Source Library	30
VSAM Base Files	300
VSAM Standards Files	3,000
VSAM Mapping Files	1,000
VSAM Databank Files	150

VSAM space requirements previously listed are enough for your initial use of the Gentran:Basic system. As you increase the number of partners, applications, and maps you use, you may need additional space.

See the section corresponding to each individual Databank file in the *Gentran:Basic for zSeries Release 6.4 Technical Reference Guide* for disk space requirements.

The installation process also requires approximately 18,000 tracks of temporary space for sequential seed and work files. You may delete these temporary files after the Gentran:Basic installation is complete, using the DELFILES job as described in Chapter 8.

Software Requirements

To operate properly, the following software must reside on the host system:

- OS/390 or z/OS operating system
- CICS Transaction Server Version 1.3 or higher
- Language Environment run-time support

Additional CICS software environment:

- CICS command-level support for COBOL and Assembler languages
- CICS Language Environment run-time modules
- VSAM support
- 3270-type terminal support

After ensuring that you have met all hardware and software requirements, you can proceed with the installation of Gentran:Basic (see **Step 2**).

Completed by: _____

Date: _____ **Time:** _____

Upload Product Distribution Files

Because the Gentran:Basic product is distributed either on a CD-ROM or by downloading it from the ESD Portal, you must upload the files to your mainframe before you can begin installing the product. This section provides step-by-step instructions for that process.

Step 2 Transfer files to your PC.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- If you are installing from ESD, unzip the **Basic_6.4_Package.zip** file that you downloaded from ESD to extract the file named **Basic_6.4_Product.exe**. This is a self-extracting .zip file that contains the entire Gentran:Basic product.
- If you are installing from CD-ROM, insert the Gentran:Basic product CD-ROM into your computer's CD-ROM drive and navigate to locate the file named **Basic_6.4_Product.exe**. This is a self-extracting .zip file that contains the entire Gentran:Basic product.
- Double click the file name to begin extracting the files onto the local hard disk on your PC. A system message prompts you with a default folder name to which the system will save the files it is extracting. If you want to select a different location, change the default folder name to your desired location in this system message.
- At the completion of the process, note the location. The folder should contain the following files:

File	Description
PCBSCPRD	The Gentran:Basic product
PCSASC	The SAS/C run-time libraries
PCBSCPD1.TXT	The JCL to allocate the target product file
PCBSCPD2.TXT	The JCL to build the sequential product files
PCSASC1.TXT	The JCL to allocate the target SAS/C file
PCSASC2.TXT	The JCL to build the sequential SAS/C files

Completed by: _____

Date: _____ Time: _____

Step 3 Upload the product JCL files to your mainframe.

To build the sequential product files on your mainframe, you must upload to the mainframe the needed JCL.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Perform the upload manually from your PC, using FTP configured in ASCII data transfer mode.

Note: For FTP, the Carriage Return and Line Feed settings (CR/LF) must be set to Off.

The files to upload are:

File	Description
PCBSCPD1.TXT	The JCL to allocate the target product file
PCBSCPD2.TXT	The JCL to build the sequential product files

- Choose target file names that are appropriate for your installation requirements.

Completed by: _____

Date: _____ **Time:** _____

Step 4 Allocate the target product file on your mainframe. Before you can upload the Gentran:Basic product file to your mainframe, the target file must be allocated on it.

Typically performed by: System Installer

Check the box next to the task as you complete it.

- Customize JCL member **PCBSCPD1** that you uploaded in **Step 3**.
- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOL=SER=** to an appropriate volume serial number used at your installation.
- Change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 5 Upload the Gentran:Basic product file from your PC to your mainframe.

Typically performed by: System Installer

Check the box next to the task as you complete it.

- Perform the upload manually from your PC using FTP configured in BINARY data transfer mode. The target file on the mainframe must be the file that you allocated in **Step 4** (GENTRAN.V6X4.BSC.UPLOAD.PCPRD).

The file to be uploaded is:

File	Description
PCBSCPRD	The Gentran:Basic product

- At the completion of the upload, verify the integrity of the file on the mainframe by looking for the following:
- Column 2 of the first record in the file should begin with the value `\INMR01`.
 - The number of bytes transferred should match the size of the source file.

Note: If neither of these are true or if the entire file is unreadable, verify that your FTP session was configured in BINARY data transfer mode. Using an incorrect transfer configuration is the most common cause of upload problems.

- If the file is not acceptable, perform the upload process again and verify the integrity of the uploaded file again until it is acceptable.

Completed by: _____

Date: _____ **Time:** _____

Step 6 Build the sequential Gentran:Basic files on your mainframe.

Typically performed by: System Installer

This step reads the Gentran:Basic product file that you uploaded in **Step 5** and extracts the files needed to complete the installation of the product on your mainframe.

The following table lists the abbreviated names of the data sets to be extracted. In the job, they are referenced by complete data set name, with the prefix **GENTRAN.V6X4**, followed by the text in the table below (for example, the full name for BATCH.LOAD is GENTRAN.V6X4.BATCH.LOAD).

Note: The data set names listed in **bold** are permanent files that must be retained after the installation is complete. All of the other files are used to initially seed the permanent Gentran:Basic files; you can delete them when the installation is complete.

Data Set Name	Description
BATCH.LOAD	Partitioned data set that contains all of the batch program load modules. This is a permanent data set; do not delete this data set at the end of installation.
CICS.LOAD	Partitioned data set that contains all of the CICS program load modules. This is a permanent data set; do not delete this data set at the end of installation.
UTILITY.SOURCE	Partitioned data set that contains source code of the utility programs. This is a permanent data set; do not delete this data set at the end of installation.
JCL	Partitioned data set that contains all of the execution JCL. This is a permanent data set; do not delete this data set at the end of installation.
SEQ.ERRCTL	Sequential data set used to load the Error Message and Control file.
SEQ.SECURITY	Sequential data set used to seed the Security file.
SEQ.PARTNER	Sequential data set used to seed the Partner file.
SEQ.CONTROL.OUTBOUND	Sequential data set used to seed the partner Outbound Control file.
SEQ.CONTROL.INBOUND	Sequential data set used to seed the partner Inbound Control file.
SEQ.PARTNER.XREF	Sequential data set used to seed the partner Cross Reference file.
SEQ.APPL.HEADER	Sequential data set used to seed the Mapping Application Header file.

Data Set Name	Description
SEQ.APPL.RECORD	Sequential data set used to seed the Mapping Application Record file.
SEQ.APPL.FIELD	Sequential data set used to seed the Mapping Application Fields file.
SEQ.APPL.LINK	Sequential data set used to seed the Mapping Application Link file.
SEQ.TRANS.HEADER	Sequential data set used to seed the Mapping Transaction Header file.
SEQ.TRANS.SEGMENT	Sequential data set used to seed the Mapping Transaction Segments file.
SEQ.TRANS.ELEMENT	Sequential data set used to seed the Mapping Transaction Elements file.
SEQ.CODE.DEFINE	Sequential data set used to seed the Mapping Code Definition file.
SEQ.CODE.CODES	Sequential data set used to seed the Mapping Code Translation file.
SEQ.CODE.DATA	Sequential data set used to seed the Mapping Data Translation file.
SEQ.CODE.VALID	Sequential data set used to seed the Mapping Validation file.
SEQ.GLOBAL.PARMS	Sequential data set that contains the global parameters used by the Outbound and Inbound Editors. This is a permanent data set; do not delete this data set after the installation is complete.
ANSI.MAPOUT.TESTDATA	Sequential data set that contains the Outbound X12 test data used to validate the installation. This is a permanent data set; do not delete this data set after the installation is complete.
ANSI.MAPIN.TESTDATA	Sequential data set that contains the Inbound X12 test data used to validate the installation. This is a permanent data set; do not delete this data set after the installation is complete.
SEQ.EDI.EDICA	Sequential data set used to seed the Databank Application Change Audit files.
SEQ.EDI.EDIIECA	Sequential data set used to seed the Databank Inbound EDI Change Audit file.
SEQ.EDI.EDIOECA	Sequential data set used to seed the Databank Outbound EDI Change Audit file.

Data Set Name	Description
SEQ.EDI.EDICFG	Sequential data set used to seed the System Configuration file. This is a permanent data set; do not delete this data set after the installation is complete.
SEQ.EDI.EDIIAA	Sequential data set used to seed the Databank Inbound Application Directory file.
SEQ.EDI.EDIIEA	Sequential data set used to seed the Databank Inbound EDI Directory file.
SEQ.EDI.EDINRC	Sequential data set used to seed the Databank Network Reconciliation file.
SEQ.EDI.EDIOAA	Sequential data set used to seed the Databank Outbound Application Directory file.
SEQ.EDI.EDIOEA	Sequential data set used to seed the Databank Outbound EDI Directory file.
SEQ.EDI.EDIPND	Sequential data set used to seed the Databank Pending files.
SEQ.EDI.EDISTORE	Sequential data set used to seed the Databank EDI Message Store files.
SEQ.EDI.APPSTORE	Sequential data set used to seed the Databank Application Message Store files.
SEQ.EDI.EDILINK	Sequential data set used to seed the Databank Link files.
DEFR.MAPOUT.TESTDATA	Sequential data set that contains the outbound X12 test data used to test the deferred enveloping feature of Gentran:Basic. This data set is optional and can be removed from the unload process if the deferred enveloping test is not being performed.
ANA.MAPOUT.TESTDATA	Sequential data set that contains the outbound TRADACOMS test data. This data set is optional and can be removed from the unload process if the TRADACOMS test is not to be performed.
ANA.MAPIN.TESTDATA	Sequential data set that contains the inbound TRADACOMS test data. This data set is optional and can be removed from the unload process if the TRADACOMS test is not to be performed.
EDF.MAPOUT.TESTDATA	Sequential data set that contains the outbound EDIFACT test data. This data set is optional and can be removed from the unload process if the EDIFACT test is not to be performed.

Data Set Name	Description
EDF.MAPIN.TESTDATA	Sequential data set that contains the Inbound EDIFACT test data. This data set is optional and can be removed from the unload process if the EDIFACT test is not to be performed.
SEQ.OPT.TABLE	Sequential data set used to initially load the Optimized Standards Table.
SEQ.APDEF.TESTDATA	Sequential data set used to test the Application Definition Maintenance job.
SEQ.EDI.EDIHELP	Sequential data set containing system Help information.
SEQ.REL.PARTNER	Sequential data set used to seed the Partner file for Relationship mode.
SEQ.REL.CNTL.INBOUND	Sequential data set used to seed the partner Inbound Control file for Relationship mode.
SEQ.REL.CNTL.OUTBOUND	Sequential data set used to seed the partner Outbound Control file for Relationship mode.
SEQ.PARTNER.RELATION	Sequential data set used to seed the Partner Relationship file.
SEQ.EDIRSEP	Sequential data set used to seed the Separator Control file.
SEQ.CHGAUD	Sequential data set used to seed the Change Audit files.

Check the box next to each task as you complete it.

- Customize JCL member **PCBSCPD2** that you uploaded in **Step 3**.
- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOL=SER=** to an appropriate volume serial number used at your installation.
- Change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ Time: _____

Upload SAS/C Distribution Files

The Gentran:Basic Data Router feature requires SAS/C load modules. If you plan to use the Data Router feature and you do not have SAS/C as part of your system runtime library, you must unload the SAS/C modules we provide. This section provides step-by-step instructions for completing that process.

Note: If you do not plan to use the Data Router feature or you already have SAS/C as part of your system runtime library, skip this section and proceed to **Step 11**.

Step 7 Upload the SAS/C JCL files to your mainframe. You must upload the JCL needed to build the sequential SAS/C files on your mainframe.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Perform the upload manually from your PC using FTP configured in ASCII data transfer mode. The files to be uploaded are:

File	Description
PCSASC1.TXT	The JCL to allocate the target SAS/C file
PCSASC2.TXT	The JCL to build the sequential SAS/C files

- Choose target file names that are appropriate for your installation requirements.

Completed by: _____

Date: _____ **Time:** _____

Step 8 Allocate the target SAS/C file on your mainframe. Before you can upload the SAS/C file to your mainframe, the target file must be allocated on it.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **PCSASC1** that you uploaded in **Step 7**.
- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOL=SER=** to an appropriate volume serial number used at your installation.
- Change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 9 Upload the SAS/C file from your PC to your mainframe.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Perform this upload manually from your PC using FTP configured in BINARY data transfer mode. The target file on the mainframe must be the file that you allocated in **Step 8** (GENTRAN.V6X4.SAS.UPLOAD.PCSASC).

The file to be uploaded is:

File	Description
PCSASC	The SAS/C run-time libraries

- At the completion of the upload, verify the integrity of the file on the mainframe by looking for the following:
- Column 2 of the first record in the file should begin with the value `\INMR01`.
 - The number of bytes transferred should match the size of the source file.

Note: If neither of these are true or if the entire file is unreadable, verify that your FTP session was configured in BINARY data transfer mode. Using an incorrect transfer configuration is the most common cause of upload problems.

- If the file is not acceptable, perform the upload process again and verify the integrity of the uploaded file again until it is acceptable.

Completed by: _____

Date: _____ **Time:** _____

Step 10 Build the sequential SAS/C files on your mainframe.

This step reads the SAS/C file that you uploaded in the previous step and extracts the files that are needed to use the Data Router feature on your mainframe.

Typically performed by: System Installer

The following table lists the abbreviated names of the data sets to be extracted. In the job, they are referenced by complete data set name, with the prefix **GENTRAN.V6X4.SASC.C700.** followed by the text in the table below (for example, the full name of LINKLIB is GENTRAN.V6X4.SASC.C700.LINKLIB).

Note: These are all permanent data sets that must be retained after the installation is complete.

Data Set Name	Description
LINKLIB	SAS/C link library
TSOLOAD	SAS/C TSO load library
ARESOBJ	SAS/C object library
CICSLOAD	SAS/C CICS load library
CICS.ARESOBJ	SAS/C object library

Check the box next to each task as you complete it.

- Customize JCL member **PCSASC2** that you uploaded in **Step 7**.
- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOL=SER=** to an appropriate volume serial number used at your installation.
- Change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Upload Standards Distribution Files

Because the Gentran standards are distributed either on a CD-ROM or by downloading them from the ESD Portal, you must upload the files to your mainframe before you can install them. This section provides step-by-step instructions for completing that process.

Step 11 Transfer files to your PC.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- If you are installing from ESD, unzip the **Gentran_Standards_PkgMMYY.zip** file that you downloaded from ESD to extract the file named **Gentran_Standards.exe**. This is a self-extracting .zip file that contains all of the standards.
- If you are installing from CD-ROM, insert the Gentran standards CD-ROM into your computer's CD-ROM drive and navigate to locate the file named **Gentran_Standards.exe**. This is a self-extracting .zip file that contains all of the standards.
- Double click the file name to begin extracting the files onto the local hard disk on your PC. A system message prompts you with a default folder name to which the system will save the files it is extracting. If you want to select a different location, change the default folder name to your desired location in this system message.
- At the completion of the process, note the location. It should contain the following files:

File	Description
STD1	Standards file part 1
STD2	Standards file part 2
STDINCL.TXT	A detailed list of versions included in these files This file will be used later for space allocations.
PCSTAND1.TXT	The JCL to allocate the target standards file
PCSTAND2.TXT	The JCL to build the sequential standards files
PCSTDCLN.TXT	The JCL to delete work files
StandardsWorksheet	Instructions for performing the standards update

Completed by: _____

Date: _____ Time: _____

Step 12 Upload the standards JCL files to your mainframe. You must upload the JCL needed to build the sequential standards files on your mainframe.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Perform this upload manually from your PC using FTP configured in ASCII data transfer mode. The files to be uploaded are:

File	Description
PCSTAND1.TXT	The JCL to allocate the target standards files
PCSTAND2.TXT	The JCL to build the sequential standards files

- Choose target file names that are appropriate for your installation requirements.

Completed by: _____

Date: _____ **Time:** _____

Step 13 Allocate the target standards files on your mainframe. Before you can upload the standards files to your mainframe, the target file must be allocated on it.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **PCSTAND1** that you uploaded in **Step 12**.
- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOL=SER=** to an appropriate volume serial number used at your installation.
- Change the data set names as required by your installation. Change only the first index level (**GENTRAN**).
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 14 Upload the standards files from your PC to your mainframe.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Perform this upload manually from your PC using FTP configured in BINARY data transfer mode. The target files on the mainframe must be the files that you allocated in **Step 13** (**GENTRAN . STDS . OC . UPLOAD . STD1** and **GENTRAN . STDS . PC . UPLOAD . STD2**). The files to be uploaded are:

File	Description
STD1	The standards file part 1
STD2	The standards file part 2

- At the completion of the uploads, verify the integrity of the files on the mainframe by looking for the following:
- Column 2 of the first record in the file should begin with the value **\INMR01**.
 - The number of bytes transferred should match the size of the source file.

Note: If neither of these are true or if the entire file is unreadable, verify that your FTP session was configured in BINARY data transfer mode. Using an incorrect transfer configuration is the most common cause of upload problems.

- If a file is not acceptable, perform the upload process again and verify the integrity of the uploaded file again until it is acceptable.

Completed by: _____

Date: _____ **Time:** _____

Step 15 Build the sequential standards files on your mainframe. This step reads the standards files that you uploaded in **Step 14** and extracts the files that will be needed to complete the installation of the standards on your mainframe.

Typically performed by: System Installer

The following table lists the abbreviated names of the data sets to be extracted. In the job, they are referenced by complete data set name, with the prefix **GENTRAN . STDS . PC . SEQ .** followed by the text in the table below (for example, the full name for ASSOC is GENTRAN.STDS.PC.SEQ.ASSOC).

Note: All of the files are used to initially seed the permanent Gentran:Basic files; you can delete them when the installation is complete.

Data Set Name	Description
ASSOC	Sequential data set used to seed the Standards Association file
ACTIVITY	Sequential data set used to seed the Standards Activity file
VERSION	Sequential data set used to seed the Standards Version file
CODE1	Sequential data set used to seed the Standards Code1 file
CODE2	Sequential data set used to seed the Standards Code2 file
CODE3	Sequential data set used to seed the Standards Code3 file
CODE4	Sequential data set used to seed the Standards Code4 file
ELEMENT	Sequential data set used to seed the Standards Element file
SEGMENT	Sequential data set used to seed the Standards Segment file
SEGDESC	Sequential data set used to seed the Standards Segment Description file
TRANS	Sequential data set used to seed the Standards Transaction file
DICT	Sequential data set used to seed the Standards Dictionary file
ELEDESC	Sequential data set used to seed the Standards Element Description file

Check the box next to each task as you complete it.

- Customize JCL member **PCSTAND2** that you uploaded in **Step 12**.
- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOL=SER=** to an appropriate volume serial number used at your installation.

- Change the data set names as required by your installation. Change only the first index level (**GENTRAN**).
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ Time: _____

Obtain Product Updates

Before beginning to define the Gentran:Basic system files in the next section, you must obtain the latest product updates. It is important that all product updates be installed before continuing with the installation process. Failing to do so may cause a failure of the installation process or corruption of the Gentran:Basic system that you build. Call the Gentran Software Product Support Center at 1-800-GENTRAN if you have questions about product updates.

Note: Product updates are available from the Support On Demand website.

Step 16 Check for the latest product updates.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Check for the latest updates for the Gentran:Basic product by going to the Support On Demand website at <https://support.sterlingcommerce.com/>.

Note: If the Support On Demand website indicates that there are no updates for the Gentran:Basic product, you may skip the rest of this step and continue with **Step 17**.

- Download all updates from the Support On Demand website.
- Install the updates. Instructions for how to install the updates can be obtained from the Support On Demand website.

Completed by: _____

Date: _____ **Time:** _____

Defining Gentran:Basic System Files

Overview

The JCL required to install Gentran:Basic is contained in the partitioned data set GENTRAN.V6X4.JCL. Before you can execute JCL, you must make the following changes:

- Add an appropriate job card.
- Change DISK of UNIT=DISK as required by your installation.
- Change the text string XXXXXX of VOLUMES to the DASD VOLUMES that will contain defined permanent data sets.
- Change the data set names to match your installation's internal requirements as specified in your Pre-installation Worksheet in Chapter 2. Target data sets should reflect Release 6.4 in the name.

Note: Modify only the first two index levels of the data set names (GENTRAN.V6X4) to simplify the installation process.

Carefully read all comments included in each JCL member. These comments can provide information about last-minute changes that were not included in the documentation, as well as information that may be essential to the installation process.

Ensure that you verify the results of each job before you proceed to the next installation step. You should never receive a return code greater than 8. A return code of 8 usually indicates that during a step, Gentran attempted to delete a file that does not exist. The file will be created during the job.

You can define Gentran:Basic system files by executing a number of batch jobs. These batch jobs include:

Batch Job	Description
DEFBASE	Defines base files when processing in Partner/Qualifier mode. These files include the System Configuration, Partner, Partner Control, Error Message, Security, and Partner Cross Reference.
DEFBASEM	Defines base files when processing in Mixed mode. These files include the System Configuration, Partner, Partner Control, Error Message, Security, and Partner Cross Reference.
DEFBASER	Defines base files when processing in Relationship mode. These files include the System Configuration, Partner, Partner Control, Error Message, Security, and Partner Relationship.
DEFMAP	Defines mapping files. These files include the Application Header, Record, Field, and Link files; Transaction Header, Segment, and Element files; and Translation Table Definition, Code Translation, Data Translation, and Data Validation files.

Batch Job	Description
DEFDB	Defines databank files. These files include up to four each; Directory, Message Store, Pending, Change Audit, and Transaction Queue files; up to two Link files; one Network Reconciliation file; and one Online Log file.
DEFSTD	Defines Standards files. These files include Standards Association, Version, Transaction, Segment, Segment Description, Element, Element Description, Activity, Dictionary, and the four Code Value files.
DEFTBL	Defines a temporary Optimized Standards Table file for verification.
DEFHELP	Defines the Help file.
DEFUNLD	Defines the permanent sequential Unload/Upload files.
DEFCA	Defines the Change Audit files.

Customizing the JCL Files

This step customizes JCL streams that will be loaded into the JCL file in **Step 18**.

Step 17 Customize JCL members **EXECRPTM**, **EXEC006O**, and **EXEC036O**. This section lists the tasks involved in customizing the job card and the data set names within the JCL streams.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card. When creating the job card, it is important that the word **JOB** is located in positions 12 – 14. Some online applications can override the job name when submitting JCL and this is necessary for the override to function properly.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing so enables you to perform a mass edit on data set names.
- If your target Trading Profile Mode is Relationship mode, make the following change to the step that executes EBDI006A in JCL member **EXEC006O**:
 - Comment out the **SYS095** and **SYS0951** DD statements for the Partner Cross-reference file and uncomment the **EDIPREL** and **EDIPREL1** DD statements for the Partner Relationship file.
- Read the comments within each JCL member and follow any additional instructions that are noted.
- Execute a Syntax check on each customized JCL member to reduce the chance of errors during the installation verification procedure. If the method you use to perform the syntax check also checks for missing data sets, you may receive errors because most data sets have not yet been defined. You should ignore these errors and focus on any true JCL syntax errors that are found.

Completed by: _____

Date: _____ Time: _____

Defining Base Files

Base files include System Configuration, Partner, Partner Control, Error Message, Security, Partner Cross Reference, and Partner Relationship.

Step 18 Customize either JCL member **DEFBASE**, **DEFBASEM**, or **DEFBASER** and submit. The JCL member you use depends on your current Trading Profile Mode or your target Trading Profile Mode if you are performing a new installation.

- For Partner/Qualifier mode, use member **DEFBASE**.
- For Mixed mode, use member **DEFBASEM**.
- For Relationship mode, use member **DEFBASER**.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Consider the following:
 - Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing so enables you to mass-change data set names.
 - Permanent Gentran:Basic files are identified with **VSAM** as the third node of the data set name.
 - Temporary Gentran:Basic files are identified with **SEQ** as the third node of the data set name. Delete these files after installation is complete.
- Modify parameters for the **EDIOPT** DD statement in Step 3 of the JCL.
 - Change the value PIM on the PROGRAM IMAGE parameter record to the three-character program image specified on the Pre-installation Worksheet in chapter 2.
 - Change the value SIM on the DATABANK MANAGER TRANSACTION ID parameter record to the three-character system image specified on the Pre-installation Worksheet in chapter 2.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ Time: _____

Defining Mapping Files

Mapping files include the Application Header, Record, Field, and Link files; Transaction Header, Segment, and Element files; and Code Definition Table, Code Translation, Data Translation, and Data Validation files.

Step 19 Customize JCL member **DEFMAP** and submit.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Consider the following:
 - Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing so enables you to mass-change data set names.
 - Permanent Gentran:Basic files are identified with **VSAM** as the third node of the data set name.
 - Temporary Gentran:Basic files are identified with **SEQ** as the third node of the data set name. You may delete these files after installation is complete.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Defining Databank Files

Databank files include up to four each; Directory, Message Store, Pending, Change Audit, and Transaction Queue files; up to two Link files; five sequential Archive files; one Network Reconciliation file; and one Online Log file.

Note: At installation, all databanks are active for verification purposes. During conversion, the levels will be modified to agree with the values you have indicated on your Pre-installation Worksheet in Chapter 2.

See Appendix A in this guide for more information on the configuration and design of the Databank subsystem.

Step 20 Customize JCL member **DEFDB** and submit.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Consider the following:
 - Change only the first two index levels of each data set name (**GENTRAN.V6X4**).
 - Permanent Gentran:Basic files are identified with **VSAM** as the third node of the data set name.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Defining the Help File

Step 21 Customize JCL member **DEFHELP** and submit.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change the text strings **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Consider the following:
 - Change only the first two index levels of each data set name (**GENTRAN.V6X4**).
 - Permanent Gentran:Basic files are identified with **VSAM** as the third node of the data set name.
 - Temporary Gentran:Basic files are identified with **SEQ** as the third node of the data set name.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Defining Permanent Sequential Unload/Upload Files

Step 22 Customize JCL member **DEFUNLD** and submit.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change the text strings **XXXXXX** as required by your installation.
- Change data set names as required by your installation. Consider the following:
 - Change only the first two index levels of each data set name (**GENTRAN.V6X4**).
 - Although these files are identified by **SEQ** as the third node of the data set name, they are permanent files that should not be deleted.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Defining the Change Audit Files

Step 23 Customize JCL member **DEFCA** and submit.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change the text strings **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Consider the following:
 - Change only the first two index levels of each data set name (**GENTRAN.V6X4**).
 - Permanent Gentran:Basic files are identified with **VSAM** as the third node of the data set name.
 - Temporary Gentran:Basic files are identified with **SEQ** as the third node of the data set name.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Defining Standards

Step 24 Customize JCL member **DEFSTD** and submit.

Typically performed by: System Installer

DEFSTD loads the online standards files (Standards Association, Version, Transaction, Segment, Segment Description, Element, Element Description, Activity, Dictionary, and the four Code files).

This job extracts EDI standards from the sequential standards files that were built in **Step 15** and loads them into the files listed above. Control cards limit the extract to only the standards versions that you use.

The following versions are currently set up to be extracted from the sequential standards files:

Version	Agency
00100	X
00200	X
00300	X
00400	X
004001	UN
00403	X
004030	X
DEFAULT	SC
Db99B	UN

Control cards for the above versions are already present in the JCL member **DEFSTD**. You can add control cards for additional versions that you use.

Refer to the “Standards Update” topic in Chapter 4 of the *Gentran:Basic for zSeries Release 6.4 Technical Reference Guide* for more information on maintaining standards. If you are selecting versions other than those versions needed to perform the verification procedure, this section contains information that will help to determine DASD allocations.

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text strings **SSSSSS** and **XXXXXX** of **VOLUMES ()** as required by your installation.

-
- Change data set names as required by your installation. Consider the following:
 - Change only the first index level of the sequential standards data sets. These are identified with the **GENTRAN . STDS** high-level qualifier.
 - Change only the first two index levels of all other data sets. These are identified with the **GENTRAN . V6X4** high-level qualifier.
 - Permanent Gentran:Basic files are identified with **VSAM** as the third node of the data set name.
 - Extract Gentran:Basic files are identified with **EXTRACT** as the third node of the data set name. You may delete these files after installation is complete.
 - Step04 of JCL member **DEFSTD** contains a list of standards versions that will be extracted. Add control cards for any additional versions that you will use.
 - Read the comments within the JCL member and follow additional instructions.
 - Submit the JCL member.
 - Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Step 25 Customize JCL member **DEFTBL** and submit.

Typically performed by: System Installer

DEFTBL loads the Optimized Standards Table file. This file is an optimized version of the online standards files and is used by the inbound and outbound editors to perform compliance checking. This job loads an initial version of the file that is used during the installation verification procedure.

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Consider the following:
 - Change only the first two index levels of each data set name (**GENTRAN.V6X4**).
 - Permanent Gentran:Basic files are identified with **VSAM** as the third node of the data set name.
 - Temporary Gentran:Basic files are identified with **SEQ** as the third node of the data set name.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Establishing the Online Environment

Overview

Gentran:Basic has an extensive CICS online environment that allows for entry, update, and inquiry of partners, maps, standards, databanks, and other administrative functions. This section of the installation procedures describes the steps that you will perform to customize the resources and update your CICS environment to install the application software and files needed to make these functions available.

Your installation will depend upon your release of CICS and how it is configured. Refer to comments within each of the following steps and associated JCL members for information about modifications that you may need to make.

You will need full access to the following items to complete this CICS installation:

- The CICS System Definition file DFHCSD
- The CICS Offline Utility program DFHCSDUP
- The CICS Resource Definition Online transaction CEDA
- The CICS Master Terminal transaction CEMT

It is assumed that a functional CICS region exists and that the system installer has full authorization to access the region and use these items.

CICS Resource Definitions for Gentran:Basic Destinations**Step 26** Customize JCL member **BSCRDOD**.*Typically performed by:* System Installer

Check the box next to each task as you complete it.

- Review each definition for your site requirements.
- Globally change the value **SIM** to the three-character system image specified on the Pre-installation Worksheet in Chapter 2.
- If you changed the CICS Group Name on the Pre-installation Worksheet in Chapter 2 from the default value **GENBSC**, globally change the value in the **GROUP** parameter in each definition to the value you are using.
- If you are installing into an MRO environment, you may need to uncomment the **REMOTESYSTEM (NAME)** parameter for each resource and change the value **NAME** to the 4-character alphanumeric name of the CICS region where the destinations reside.

In addition, if you are creating a unique group name for each MRO region, you will need to create a duplicate JCL member for each unique name.

- Read the comments within the JCL member and follow additional instructions.

Completed by: _____**Date:** _____ **Time:** _____

CICS Resource Definitions for Gentran:Basic Files

Step 27 Customize JCL member **BSCRDOF**.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Review each definition for your site requirements.
- Globally change the value **SIM** to the three-character system image specified on the Pre-installation Worksheet in Chapter 2.
- Each definition contains the **DSNAME** parameter to specify the names of the data sets to be allocated for the files. You may remove these parameters and instead specify the files using DD statements in the CICS startup JCL. If you wish to do this, **Step 32** provides instructions for updating the CICS startup JCL.

If you elect to retain the **DSNAME** parameters, you must globally change the data set name high-level qualifier **GENTRAN.V6X4** to the value specified on the Pre-installation Worksheet in Chapter 2.
- If you changed the CICS Group Name on the Pre-Installation Worksheet in Chapter 2 from the default value **GENBSC**, globally change the value in the **GROUP** parameter in each definition to the value you are using.
- Review Local Shared Resource Pool IDs for your system. To manage overhead, most Gentran:Basic files are assigned to an LSR pool. Files that cannot be installed in a pool use the parameter **LSRPOOLID (NONE)** in the definitions.
- If you are processing in Relationship mode, you must replace the definitions for the Partner Cross-reference files (**SIMPREF** and **SIMPREF1**) with the definitions for the Partner Relationship files (**SIMPREL** and **SIMPREL1**). The BSCRDOF member contains both sets of definitions with the definitions for the Partner Relationship files commented out.
- If you are installing into an MRO environment, you will need to uncomment the **KEYLENGTH** and **RECORDSIZE** parameters for each resource definition.

You may also need to uncomment the **REMOTESYSTEM (NAME)** parameter for each resource and change the value **NAME** to the 4-character alphanumeric name of the CICS region where the files reside.

In addition, if you are creating a unique group name for each MRO region, you will need to create a duplicate JCL member for each unique group name.
- Read the comments within the JCL member and follow additional instructions.

Completed by: _____

Date: _____ **Time:** _____

CICS Resource Definitions for Gentran:Basic Programs and Mapsets

Step 28 Customize JCL member **BSCRDOPM**.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Review each definition for your site requirements.
- All Gentran:Basic CICS applications are identified in this member. Programs and BMS mapsets are included.
- Globally change the value **PIM** to the three-character program image specified on the Pre-installation Worksheet in Chapter 2.
- Review the definitions for the GENBYPAS and PIMXSEC programs. These sample programs can be used to test the Entry Gateway and Security Exit components of the User Security Facility. If you choose to implement one of these components and you would like to test it using one of these programs, uncomment the definition for the program you wish to use. See Appendix E in this guide for more information about using these programs.
- If you changed the CICS Group Name on the Pre-installation Worksheet in Chapter 2 from the default value **GENBSC**, globally change the value in the **GROUP** parameter in each definition to the value you are using.
- Read the comments within the JCL member and follow additional instructions.

Completed by: _____

Date: _____ **Time:** _____

CICS Resource Definitions for Gentran:Basic Transactions

Step 29 Customize JCL member **BSCRDOT**.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Review each definition for your site requirements.
- Globally change the value **SIM** to the three-character system image specified on the Pre-installation Worksheet in Chapter 2.
- Globally change the value **PIM** to the three-character program image specified on the Pre-installation Worksheet in Chapter 2.
- Review the definition for the **SIMC** transaction ID. This transaction can be used to test the sample Entry Gateway program **GENBYPAS**. If you choose to implement this component of the User Security Facility and you would like to test it using this program, uncomment the definition for the **SIMC** transaction ID. See Appendix E in this guide for more information about using this transaction.
- If you changed the CICS Group Name on the Pre-installation Worksheet in Chapter 2 from the default value **GENBSC**, globally change the value in the **GROUP** parameter in each definition to the value you are using.
- If you are installing into an MRO environment, you may need to uncomment the **REMOTESYSTEM (NAME)** parameter for each resource and change the value **NAME** to the 4-character alphanumeric name of the CICS region where the transactions reside.
- Read the comments within the JCL member and follow additional instructions.

Completed by: _____

Date: _____ **Time:** _____

Defining Gentran:Basic Resources in the CICS System Definition File

Step 30 Customize JCL member **DEFRDO**.

This step adds the customized JCL members from the previous steps to the System Definition file.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a Job Card.
- Change data set names **YOUR.CICS.SDFHLOAD** and **YOUR.CICS.DFHCS** as required by your installation.
- Change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- If you changed the CICS Group Name on the Pre-installation Worksheet in Chapter 2 from the default value **GENBSC**, substitute your group name in the **DELETE** step in the JCL.
- If you are defining the Gentran:Basic CICS resources in an existing group, you must comment out or remove the **DELETE** step in the JCL. Otherwise, your existing group will be deleted.
- If you are installing into an MRO environment, you may need to run this job multiple times depending on whether or not you are sharing the CSD file among the regions and whether or not you are using different group names in each region. If you do need to run the DEFRDO job multiple times, modify the CSD file name, group name, and/or JCL member names to meet your needs.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ Time: _____

Renaming Gentran:Basic Programs and Mapsets

Step 31 Customize JCL member **BSCNAME**. This job will copy and rename all Gentran:Basic online CICS programs and mapsets to reflect the program image.

Note: All online CICS programs and mapsets are supplied with a program image of **EDI**. If you have chosen **EDI** as your program image, you may skip this step.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOL=SER=** to an appropriate volume serial number used at your installation.
- Change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- Globally change the value **PIM** to the three-character program image specified on the Pre-installation Worksheet in Chapter 2.
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Updating the CICS Startup JCL

Step 32 Allocate the Gentran:Basic resources to your CICS region.

Typically performed by: System Installer

Check the box next to each task as you complete it.

Add the CICS load library created in **Step 31** to the DFHRPL concatenation. The recommended sequence to specify the load libraries for the Gentran products is:

- Gentran:Viewpoint
- Gentran:Basic
- Gentran:Realtime
- Gentran:Structure
- Gentran:Plus
- Gentran:Control

You must add DD statements for the destinations that you defined in **Step 26**. JCL member BSCCICSD contains DD statements that you may use.

Globally change the value **SIM** to the three-character system image specified on the Pre-installation Worksheet in Chapter 2.

Globally change the data set name high-level qualifier **GENTRAN.V6X4** to the value specified on the Pre-installation Worksheet in Chapter 2.

If you elected to remove the **DSNAME** parameters from the file definitions in **Step 27**, you must add DD statements to define the files to CICS. JCL member **BSCCICS** contains DD statements that you may use.

Globally change the value **SIM** to the three-character system image specified on the Pre-installation Worksheet in Chapter 2.

Globally change the data set name high-level qualifier **GENTRAN.V6X4** to the value specified on the Pre-installation Worksheet in Chapter 2.

Start or restart the CICS region.

Completed by: _____

Date: _____ Time: _____

Installing the Gentran:Basic CICS Group

Step 33 Use the CEDA transaction to make the Gentran:Basic CICS resources available to your CICS region.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Log on to CICS as required within your environment to access the CEDA transaction. When you have finished, clear the screen.
- Type the following command to dynamically install the resources. If you changed the CICS Group Name on the Pre-installation Worksheet in Chapter 2 from the default value **GENBSC**, substitute your group name for the value **GENBSC** in the command. Press **Enter** to invoke the command.

CEDA INSTALL GROUP (GENBSC)

Check for the **Install Successful** result from CEDA. When you have finished, press **PF3** and then clear the screen.

- If you defined the Gentran:Basic CICS resources in an existing group that is already specified in a list of groups that CICS installs at startup, you may skip the remainder of this step.
- Type the following command to permanently add the group to a list of groups that CICS installs at startup. If you changed the CICS Group Name on the Pre-installation Worksheet in Chapter 2 from the default value **GENBSC**, substitute your group name for the value **GENBSC** in the command. Also substitute your list name for the value **LISTNAME** in the command. Press **Enter** to invoke the command.

CEDA ADD GROUP (GENBSC) LIST (LISTNAME)

Check for the **Add Successful** result from CEDA. When you have finished, press **PF3** and then clear the screen.

Completed by: _____

Date: _____ **Time:** _____

Verifying the Gentran:Basic CICS Installation

Step 34 The following commands can be used to confirm successful installation. Use them to compare each resource to the input in JCL members **BSCRDOD**, **BSCRDOF**, **BSCRDOPM**, and **BSCRDOT** as appropriate.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Type the following command to display all the resources in the group. If you changed the CICS Group Name on the Pre-installation Worksheet in Chapter 2 from the default value **GENBSC**, substitute your group name for the value **GENBSC** in the command. Press **Enter** to invoke the command.

```
CEDA DISPLAY GROUP (GENBSC)
```

Review each entry displayed on the screen. When you have finished, press **PF3**, and then clear the screen.

- Type the following commands to open and enable all files used by Gentran:Basic. Change the value **SIM** to the three-character system image specified on the Pre-installation Worksheet in Chapter 2.

```
CEMT SET FILE (SIMAP*) OPE ENA – Mapping Application
CEMT SET FILE (SIMTR*) OPE ENA – Mapping Transaction
CEMT SET FILE (SIMCD*) OPE ENA – Mapping Codes
CEMT SET FILE (SIMI*) OPE ENA – Databank Inbound EDI and Application
CEMT SET FILE (SIMO*) OPE ENA – Databank Outbound EDI and Application
CEMT SET FILE (SIMP*) OPE ENA – Partner
CEMT SET FILE (SIMS*) OPE ENA – Standards and Security
CEMT SET FILE (SIMR*) OPE ENA – JCL and Separator Control
CEMT SET FILE (SIM*CHA) OPE ENA – Change Audit
```

This is an important step in verification. All Gentran:Basic files must be available to CICS before you can continue. If a file allocation problem occurs, check your CICS system log and file definitions. You must resolve all problems.

- Type the following command to load all programs and mapsets. Replace **PIM** with the three-character program image specified on the Pre-installation Worksheet in Chapter 2.

```
CEMT SET PROGRAM (PIM*) NEW
```

If a program fails to load, most likely an error occurred in the virtual system resources or library concatenation. All Gentran:Basic online programs and mapsets must be available to CICS before you can continue.

Review each entry displayed on the screen. When you have finished, press **PF3** and then clear the screen.

Completed by: _____

Date: _____ **Time:** _____

You have completed the installation of Gentran:Basic and are now ready to begin the verification procedures.

Installation Verification for Partner/Qualifier Mode

Overview

After you have completed the installation steps described in Chapter 3, “Installing Gentran:Basic,” you must verify your work. To do this, you execute Gentran:Basic components and review the resulting batch reports and screens. This chapter describes the verification procedure for Partner/Qualifier mode processing. The verification steps for Relationship mode and Mixed mode processing are provided in Chapter 5, “Installation Verification for Relationship and Mixed Modes.”

This chapter also familiarizes you with Gentran:Basic functionality in a tutorial-like fashion.

This chapter contains the following topics:

Topic	Page
Introduction	4-2
Inbound Process	4-3
Outbound Process	4-6
Online Screens	4-9
Using Jump Codes	4-9
Performing the Installation Verification Procedure	4-10
Batch Maintenance	4-67

Introduction

Data on sample screens and batch reports in this guide will not exactly match the data on your screens and reports for various reasons: your run date and time is different, and the install data may have changed since the release of this guide.

This chapter is designed to help you:

- Verify correct flow from one screen to another.
- Verify correct fields and PF keys setup on each screen, and make sure no superfluous text is displayed on the screens.
- Get familiar with system components, such as how to update the system and how to navigate more easily through the system.
- Verify correct layout of each report, and make sure that no error messages exist.

The steps in the installation verification procedure are independent of each other. You can perform multiple steps simultaneously, and you do not necessarily need to complete the steps in the order presented. However, if you perform the steps in the installation verification procedure in an alternate order, your screens may look different from the sample screens shown in this chapter.

When you encounter discrepancies on the screens or batch reports, you must review the respective section in Chapter 3, “Installing Gentran:Basic.”

Inbound Process

Perform the verification steps in this section to validate correct inbound process installation.

Step 1 Execute the Inbound Process.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **INBOUND** to meet your installation requirements and submit.
- Verify that the Return Codes equal 0.
- Compare your reports with the following sample reports as shown in Figure 4.1 through Figure 4.6.

Outbound Process

Perform the installation verification steps in this section to validate correct outbound process installation.

Step 2 Execute the outbound process.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **OUTBOUND** to meet your installation requirements and submit.
- Verify that the Return Codes equal 0.
- Compare your reports with the following sample reports (Figure 4.7 through Figure 4.10).

```

Online Screens

The steps in this section lead you through testing the Gentran:Basic screens to validate that setup of the Gentran:Basic subsystems is correct. Before the validation steps, the section explains Gentran:Basic jump codes and how to use them to facilitate navigation from screen to screen.

Using Jump Codes

A jump code is a 10-character alphanumeric field located at the upper left corner of each Gentran screen. This field enables you to move, or *jump*, directly from one screen to another while bypassing menus. In Gentran:Basic, most screens have a jump code associated with them.

Use the following procedure to jump between screens:

1. Press **Home**.

The cursor moves to the Jump Code field at the top left of the screen, to the right of the screen name.

2. Type the jump code and press **Enter**.

See “Jump Codes” in Chapter 1 of the *Gentran:Basic for zSeries Release 6.4 User’s Guide* for more information.

See Appendix A of the *Gentran:Basic for zSeries Release 6.4 User’s Guide* for a complete list of screen jump codes.

Performing the Installation Verification Procedure

This section takes you through the subsystems to review the screens and verify that installation was successful.

Gentran Main Menu

The Gentran Main Menu provides access to all subsystems in Gentran:Basic.

Step 3 Access the Gentran Main menu.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Display the appropriate screen for the CICS terminal and clear the screen. At the insertion point, type the System Image ID and press **Enter** to display the Gentran:Basic logon screen.

```
EDIM000                                     12/01/2005

without prior written permission. Restricted rights.

Enter                                     PF3=Exit
```

Note: The four lines above the User ID and Password fields indicate which options are selected and which Gentran:Basic add-on products are installed on your system.

See Appendix C for more information about the System Image feature.

- To display the Gentran Main Menu (EDIM001):
 1. Type **ADMIN** in the User ID field and press **Tab**.
 2. Type **SECURITY** in the Password field and press **Enter**.

The screenshot shows a terminal window titled "GENTRAN MAIN MENU". At the top, it displays "EDIM001 0.0" and "EDI/EDI" on the left, and "XXX" and "XXXXXXXXX" on the right, with the date "12/01/2005" and time "12:00:00". Below this, instructions state: "Type the number of your selection below and press ENTER, or press the PF3 key to Exit." A list of nine menu options follows, with the first five being maintenance menus and the last four being "GENTRAN" variants. A small circle with a horizontal line through it is positioned to the left of the first menu item, and a line points from it to the text "selection field" on the left side of the page. At the bottom of the screen, it says "Enter PF1=Help", "PF3=Exit", and "PF15=Logoff".

EDIM001 0.0 _____ GENTRAN MAIN MENU XXX 12/01/2005

Mapping Subsystem Copy Feature

Step 12 Test the Copy feature of the Mapping subsystem.

To test the Copy feature of the Mapping subsystem, you will perform these tasks:

- Copy a transaction definition to a new one.
- Modify the new transaction definition by copying segments from the Standards.
- Delete the newly created transaction definition.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- From any Gentran screen, press **Home** to move the insertion point to the Jump Code field. Then, type **5.3.1** and press **Enter** to jump to the Table Directory screen (EDIM586).

```

Select

Batch Maintenance

Use this section to verify correct installation for batch maintenance. Run the jobs outlined in the following steps and compare your reports with the samples provided.

Step 13 Run the Batch Partner Print program (EBDI006).

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member EXEC006 to meet your installation requirements and submit.

Note: The parameter for Step01 in SYS030 should be PRINT ALL.

- Verify that the Return Codes equal zero.
- Compare your reports with the following sample report (Figure 4.11).

Note: The values in some of the fields may not match those produced by your run. Verify that the layout of the report is same and that inconsistencies did not occur.

Figure 4.18 Sample EDIAUDT DD Output from EDID205

Completed by: _____

Date: _____ Time: _____

Step 17 Run the Inbound Application Databank Extract program (EDID405).

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **EXEC405** to meet your installation requirements and submit.
- Verify that the Return Codes equal zero.
- Compare your reports with the following sample reports (Figure 4.19 through Figure 4.21).

Note: The values in some of the fields may not match those produced by your run. Verify that the layout of the report is same and that inconsistencies did not occur.

```

Step 21 Run the Batch Inbound EDI Databank Purge program (EDID301).

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **EXEC301** to meet your installation requirements and submit.
- Verify that the Return Codes equal zero.
- Compare your reports with the following sample reports (Figure 4.29 and Figure 4.30).

Note: The values in some of the fields may not match those produced by your run. Verify that the layout of the report is same and that inconsistencies did not occur.

Step 22 Run the Batch Mapping Report — Standard Sequence program (EBDI052).

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **EXEC052** to meet your installation requirements and submit.

Note: The parameter for Step02 in SYS001 should be ANSI4030POSALLY.

- Verify that the Return Codes equal zero.

- Compare your reports with the following sample reports (Figure 4.31 through Figure 4.33).

Note: The values in some of the fields may not match those produced by your run. Verify that the layout of the report is same and that inconsistencies did not occur.

```

Step 23 Run the Batch Mapping Report – Application Sequence program (EBDI053).

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **EXEC053** to meet your installation requirements and submit.

Note: The parameter for Step02 in SYS001 should be ANSI4030POSALLY.

- Verify that the Return Codes equal zero.

- Compare your reports with the following sample reports (Figure 4.34 through Figure 4.36).

Note: The values in some of the fields may not match those produced by your run. Verify that the layout of the report is same and that inconsistencies did not occur.

The installation verification procedures are complete.

Installation Verification for Relationship and Mixed Modes

Overview

After you have completed the installation steps described in Chapter 3, “Installing Gentran:Basic,” you must verify your work. To do this, you execute Gentran:Basic components and review the resulting batch reports and screens. This chapter describes the verification procedure for Relationship mode and Mixed mode processing. The verification steps for Partner/Qualifier mode processing are provided in Chapter 4, “Installation Verification for Partner/Qualifier Mode.”

This chapter also familiarizes you with Gentran:Basic functionality in a tutorial-like fashion.

This chapter contains the following topics:

Topic	Page
Introduction	5-2
Inbound Process	5-3
Outbound Process	5-7
Online Screens	5-10
Using Jump Codes	5-10
Performing the Installation Verification Procedure	5-11
Batch Maintenance	5-66

Introduction

Data on sample screens and batch reports in this guide will not exactly match the data on your screens and reports for various reasons: your run date and time is different, and the install data may have changed since the release of this guide.

This chapter is designed to help you:

- Verify correct flow from one screen to another.
- Verify correct fields and PF keys setup on each screen, and make sure no superfluous text is displayed on the screens.
- Get familiar with system components, such as how to update the system and how to navigate more easily through the system.
- Verify correct layout of each report, and make sure that no error messages exist.

The steps in the installation verification procedure are independent of each other. You can perform multiple steps simultaneously, and you do not necessarily need to complete the steps in the order presented. However, if you perform the steps in the installation verification procedure in an alternate order, your screens may look different from the sample screens shown in this chapter.

When you encounter discrepancies on the screens or batch reports, you must review the respective section in Chapter 3, Installing Gentran:Basic.

Inbound Process

Perform the verification steps in this section to validate correct inbound process installation.

Step 1 Execute the Inbound Process

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **INBOUND** to meet your installation requirements.
- If you are processing in Relationship mode, make the following modification to the step that executes EBDI001:
 - Comment out the **SYS095** DD statement for the Partner Cross Reference file and uncomment the **EDIPREL** DD statement for the Partner Relationship file.
- Submit the JCL member.
- Verify that the Return Codes equal zero.
- Compare your reports with the following sample reports (Figure 5.1 through Figure 5.6).

Outbound Process

Perform the verification steps in this section to validate correct outbound process installation.

Step 2 Execute the Outbound Process

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **OUTBOUND** to meet your installation requirements.
- If you are processing in Relationship mode, make the following modifications to the step that executes EBDI042:
 - Comment out the **SYS095** DD statement for the Partner Cross Reference file and uncomment the **EDIPREL** DD statement for the Partner Relationship file.
 - Modify the second in-stream parameter record with the **SYS001** DD statement to assign “YOUR COMPANY” as the Default User ID starting in position 40.
- If you are processing in Mixed mode, make the following modification to the step that executes EBDI042:
 - Modify the second in-stream parameter record with the **SYS001** DD statement to assign **ISA-PARTNER** as the Default User ID starting in position 40.
- Submit the JCL member.
- Verify that the Return Codes equal zero.
- Compare your reports with the following sample reports (Figure 5.7 through Figure 5.10).

```

Online Screens

The steps in this section lead you through testing the Gentran:Basic screens to validate that set-up of the Gentran:Basic subsystems is correct. Before the validation steps, the section explains Gentran:Basic jump codes and how to use them to facilitate navigation from screen to screen.

Using Jump Codes

A jump code is a 10-character alphanumeric field located at the upper left corner of each Gentran screen. This field enables you to move, or *jump*, directly from one screen to another while bypassing menus. In Gentran:Basic, most screens have a jump code associated with them.

To jump between screens:

1. Press **Home**.

The cursor moves to the Jump Code field at the top of the screen, to the right of the screen name.

2. Type the jump code and press **Enter**.

See “Jump Codes” in Chapter 1 of the *Gentran:Basic for zSeries Release 6.4 User’s Guide* for more information.

See Appendix A of the *User’s Guide* for a complete list of screen jump codes.

Performing the Installation Verification Procedure

This section takes you through the subsystems to review the screens and verify that installation was successful.

Gentran Main Menu

The Gentran Main Menu provides access to all subsystems in Gentran:Basic.

Step 3 Access the Gentran Main Menu.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Bring up the appropriate screen for the CICS terminal and clear the screen. At the insertion point, type the System Image ID and then press **Enter** to display the Gentran:Basic logon screen.

```

Partner Subsystem

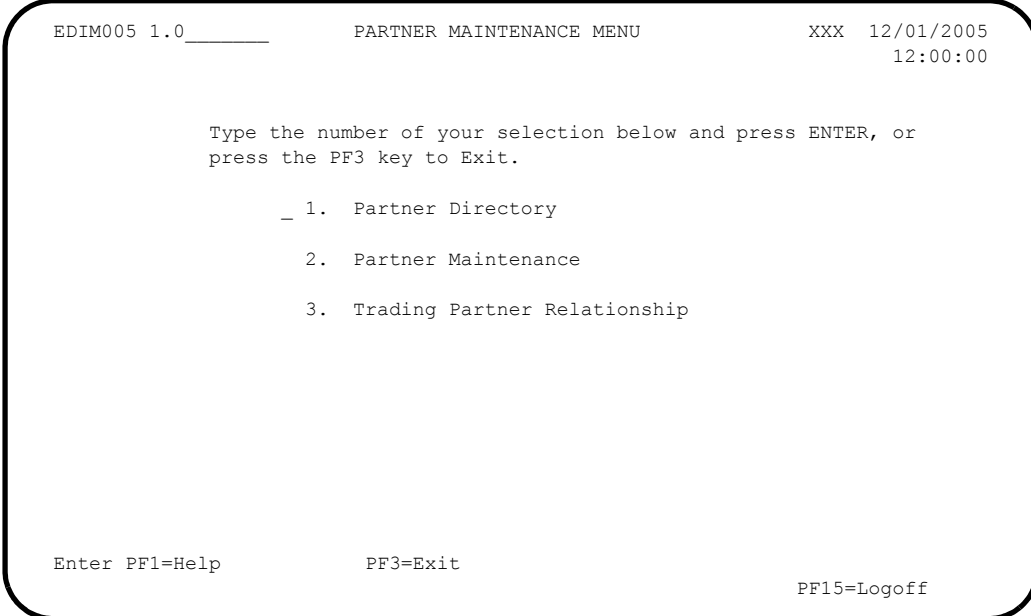

Step 4 Verify the Partner subsystem installation.

Note: If you are processing in Mixed mode, the screens in the Partner subsystem are formatted the same as they are for Partner/Qualifier mode processing. Therefore, if you are processing in Mixed mode, verify these screens by referring to Step 4 in Chapter 4, “Installation Verification for Partner/Qualifier Mode.” After completing that step, return to this chapter and continue with **Step 5**.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- On the Gentran Main Menu, type **1** in the selection field and press **Enter** to display the Partner Maintenance Menu (EDIM005).

```

Batch Maintenance

Use this section to verify correct installation for batch maintenance. Run the jobs outlined in the following steps and compare your reports with the samples provided.

Step 13 Run the Batch Partner Print program (EBDI006).

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **EXEC006** to meet your installation requirements.

Note: The parameter for Step01 in SYS030 should be **PRINT ALL**.

- If you are processing in Relationship mode, make the following modification to the step that executes EBDI006A:

- Comment out the **SYS095** and **SYS0951** DD statements for the Partner Cross Reference file and uncomment the **EDIPREL** and **EDIPREL1** DD statements for the Partner Relationship file.

- Submit the JCL member.

- Verify that the Return Codes equal zero.

- Compare your reports with the following sample reports.

Note: The values in some of the fields may not match those produced by your run. Verify that the layout of the report is same and that inconsistencies did not occur.

Note: If you are processing in Mixed mode, the layout of the reports will be the same as in Partner/Qualifier mode. Therefore, you should compare your reports to Figure 4-11 (in Chapter 4) rather than Figure 5.11.

```

Completed by: _____

Date: _____ Time: _____

Step 18 Run the Batch Outbound Application Databank Purge program (EDID101).

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **EXEC101** to meet your installation requirements and submit.
- Verify that the Return Codes equal zero.
- Compare your reports with the following sample reports (Figure 5.22 and Figure 5.23).

Note: The values in some of the fields may not match those produced by your run. Verify that the layout of the report is same and that inconsistencies did not occur.

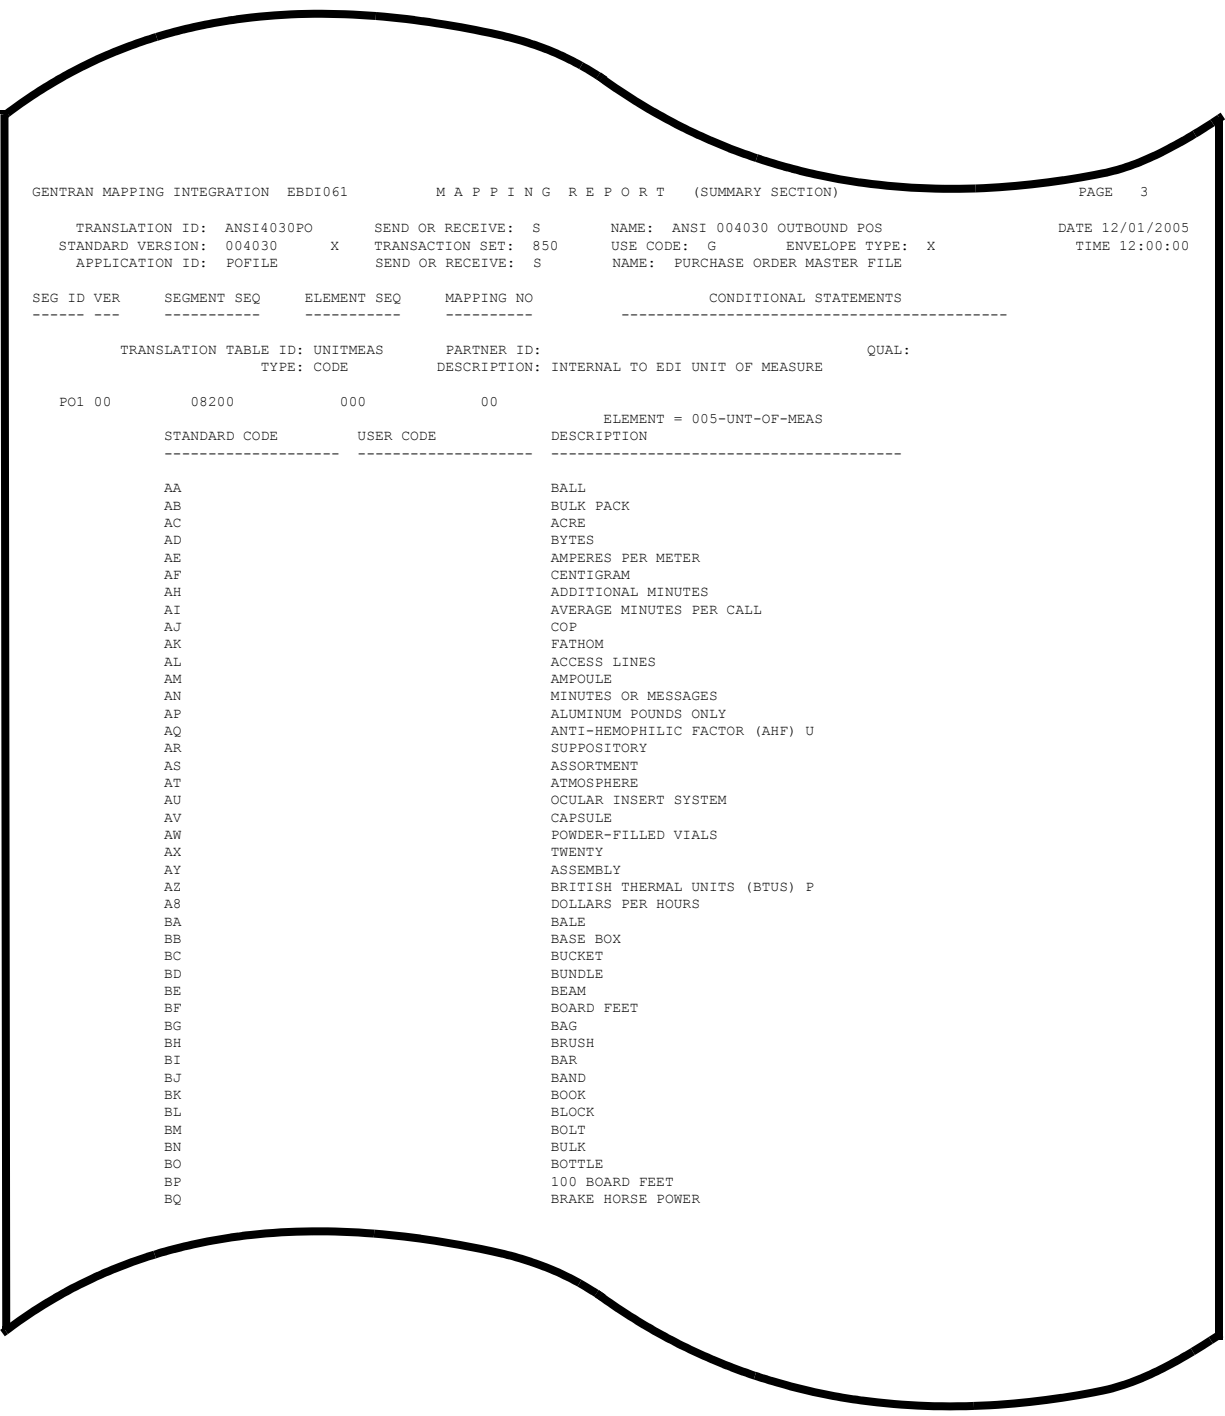

Figure 5.37 Continued – Sample SYS005 DD Output from EBDI061

Completed by: _____

Date: _____ Time: _____

Step 23 Run the Batch Mapping Report – Application Sequence program (EBDI053).

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Modify JCL member **EXEC053** to meet your installation requirements and submit.

Note: The parameter for Step02 in SYS001 should be **ANSI4030POSALLY**.

- Verify that the Return Codes equal zero.

- Compare your reports with the following sample reports (Figure 5.34 through Figure 5.36).

Note: The values in some of the fields may not match those produced by your run. Verify that the layout of the report is same and that inconsistencies did not occur.

Converting to Release 6.4

Overview

This chapter explains the steps involved in converting to Gentran:Basic for zSeries Release 6.4 from Gentran:Basic for MVS Release 6.0, Gentran:Basic for OS/390 Release 6.1, Gentran:Basic for zSeries Release 6.2, or Gentran:Basic for zSeries Release 6.3. Customers who are using earlier releases of Gentran:Basic should contact the Gentran Software Product Support Center.

Note: If you are a new Gentran:Basic customer, this procedure does not pertain to your system. Skip this chapter.

Introduction

You must complete the installation verification procedure before you perform the conversion process.

For verification instructions, see Chapter 4 if you are processing in Partner/Qualifier mode or Chapter 5 if you are processing in Relationship or Mixed mode.

This chapter describes conversions from different releases of Gentran:Basic to Release 6.4. Perform only those steps corresponding to your release of Gentran:Basic.

All the JCL members referenced in this chapter are located in **GENTRAN.V6X4.JCL**.

In every step of the conversion process, you will be instructed to close and disable files to the Release 6.4 CICS environment before submitting the conversion job and then to enable them when the conversion has completed. The first three positions of each file name are always specified as **SIM** to represent the system image. When performing the requested action, always substitute the three-character system image specified on the Pre-installation Worksheet in Chapter 2 for the value **SIM**.

Converting the Release 6.0 Files to the Release 6.4 Formats

This section describes the tasks required to convert your files from Gentran:Basic for MVS Release 6.0 to Gentran:Basic for zSeries Release 6.4 formats.

Step 1 Convert the Gentran:Basic portion of the System Configuration file.

Note: The configuration records for other Gentran products will be converted at the time of their installation.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNCFG60**.
- Close and disable the **SIMCFG** file in the Release 6.4 CICS environment.
- Submit the **CNCFG60** job.
- After the job has successfully completed, enable the **SIMCFG** file in the Release 6.4 CICS environment.

Continue with **Step 2**, Convert Partner subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 2 Convert Partner subsystem.

In this step you will convert the following files:

- Partner
- Partner Inbound Control
- Partner Outbound Control

Typically performed by: System Installer

Complete one of the following:

- If you are converting the entire contents of the Release 6.0 partner and control number files to Release 6.4, perform **Step 2a**.
- If you are performing incremental conversion (i.e., converting only part of the records at this time), perform **Step 2b** and **Step 2c**.

Step 2a Convert entire Partner subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRT60**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRT60** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB

Continue with **Step 2d**, Convert Partner Cross-reference file.

Step 2b Prepare empty VSAM for incremental conversion of Partner subsystem.

This step deletes and redefines the Partner subsystem and only needs to be performed one time.

Note: If you have already submitted CNPRT60, skip **Step 2b** and **Step 2c**.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRTDEF**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRTDEF** job.
- Verify successful completion.

Continue with **Step 2c**, Incrementally convert Partner subsystem files.

Step 2c Incrementally convert Partner subsystem files.

Note: Repeat this step as often as needed.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRT60P**. Enter a parameter for each partner to be converted or specify a range of Partner IDs for conversion.
- If necessary, close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRT60P** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB

Continue with **Step 2d**, Convert Partner Cross-reference file.

Step 2d Convert Partner Cross-reference file.

Check the box next to each task as you complete it.

- Customize JCL member **CNXRF60**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPREF and SIMPREF1
- Submit the **CNXRF60** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPREF and SIMPREF1

Continue with **Step 3**, Convert Standards subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 3 Convert Standards subsystem.

Note: As of **D 00A** for EDIFACT and **004030** for ASC X12, repeating data elements are part of the standard. If you plan to use the Repeating Element feature, we recommend that you reload these versions from your Release 6.4 standards.

In this step, you will convert the following files:

- Version
- Transaction
- Segment
- Segment Description
- Element
- Element Description
- Dictionary
- Activity
- Code (four files)
- Association

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNSTD60**.
- Close and disable these Standards files in the Release 6.4 CICS environment:
SIMSACT, SIMSASC, SIMSCD1, SIMSCD2, SIMSCD3, SIMSCD4, SIMSDIC, SIMSELD, SIMSELE, SIMSSEG, SIMSSGD, SIMSTRN, and SIMSVR.
- Submit the **CNSTD60** job.
- After the job has successfully completed, enable these Standards files in the Release 6.4 CICS environment:
SIMSACT, SIMSASC, SIMSCD1, SIMSCD2, SIMSCD3, SIMSCD4, SIMSDIC, SIMSELD, SIMSELE, SIMSSEG, SIMSSGD, SIMSTRN, SIMSVR

Continue with **Step 4**, Create Optimized Standards Table file.

Completed by: _____

Date: _____ **Time:** _____

Step 4 Create Optimized Standards Table file.

The Optimized Standards Table file is a VSAM data set that is used by the inbound and outbound Editor programs to perform EDI compliance checking. The information to build this file is extracted from the online Standards files.

Note: You must run this job each time you make changes to the Standards files.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- In the Standards Maintenance subsystem, navigate to the Transactions in Use screen and select the version and transaction parameter value combinations that meet your requirements.

Note: You do not need to reset previously set parameter values.

- Customize and submit JCL member **EXEC030**.

Continue with **Step 5**, Convert Databank subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 5 Convert Databank subsystem.

Before converting to Release 6.4, you must update Release 6.0 databank files. The files to update and convert include the following:

- Directory
- Message Store
- Pending
- Change Audit
- Link
- Archive
- Queue

This step of the conversion process is divided into substeps. The following table describes where each substep begins.

If you are converting...	See...
<i>Convert Files to 6.4</i>	
<i>Miscellaneous Databank Files</i>	Step 5a
<i>Application Databank Files</i>	
Inbound application databank only	Step 5b
Outbound application databank only	Step 5c
<i>EDI Databank Files</i>	
Inbound EDI databank only	Step 5d
Outbound EDI databank only	Step 5e

Typically performed by: System Installer

Check the box next to the task as you complete it.

- Before running these conversions, close and disable these Databank files in the Release 6.4 CICS environment:
- SIMIAA, SIMIACA, SIMIAP, SIMIAS, SIMIEA, SIMIECA, SIMIEL, SIMIEP, SIMIES, SIMOAA, SIMOACA, SIMOAL, SIMOAP, SIMOAS, SIMOEA, SIMOECA, SIMOEP, SIMOES, SIMOLF, SIMQ091, SIMQ093, SIMQ095, SIMQ097

Continue with **Step 5a**, Convert Miscellaneous Databank files.

Step 5a Convert Miscellaneous Databank files.

Check the box next to each task as you complete it.

- Customize and submit JCL member **CNDBM**.
- Verify successful completion.

Continue with **Step 5b**, Convert Inbound Application Databank files.

Step 5b Convert Inbound Application Databank files.

Note: If you are not using the inbound application databank, skip this step and continue with **Step 5c**, Convert Outbound Application Databank files.

The following tasks are intended to update your 6.0 Inbound Application databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.0 job streams to accomplish this. Your users should be familiar with the procedure.

If your users do not apply online changes to your Inbound Application Databank files, you may skip the execution of EDID405 and proceed to the execution of EDID401.

Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.0 databank files. Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.0 JCL and files, execute the **EDID405** (Inbound Application Databank Extract) program by setting the **APPLY-UPDATES-ONLY** parameter to Yes in the 6.0 environment. You must add this parameter to the current list supplied with the program.
- After the job has successfully completed, execute the **EDID401** (Inbound Application Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK INBOUND-APPLICATION** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit the **CNDBA60I** job.

After the job has successfully completed, continue with **Step 5c**, Convert Outbound Application Databank files.

Step 5c Convert Outbound Application Databank files.

Note: If you are not using the outbound application databank, skip this step and continue with **Step 5d**, Convert Inbound EDI Databank files.

The following tasks are intended to update your 6.0 Outbound Application databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.0 job streams to accomplish this.

If your users do not apply online changes to your Outbound Application Databank files, you may skip the execution of EBDI042 and proceed to the execution of EDID101.

Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.0 databank files. Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.0 JCL and files, execute the **EBDI042** (Outbound Data Mapping) program by setting the **DATABANK REPROCESS** (column 38 of SYS001) parameter to **Y** in the 6.0 environment.

Note: The EBDI042 program issues an acceptable return code of 08 if no data is processed.

- After the job has successfully completed, execute the **EDID101** (Outbound Application Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK OUTBOUND-APPLICATION** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBA600**.

After the job has successfully completed, continue with **Step 5d**, Convert Inbound EDI Databank files.

Step 5d Convert Inbound EDI Databank files.

Note: If you are not using the inbound EDI databank, skip this step and continue with **Step 5e**, Convert Outbound EDI Databank files.

The following tasks are intended to update your 6.0 Inbound EDI databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.0 job streams to accomplish this.

If your users do not apply online changes to your Inbound EDI Databank files, you may skip the execution of EBDI001 and proceed to the execution of EDID301. **Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.0 databank files.** Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.0 JCL and files, execute the **EBDI001** (Inbound Editor) program by setting the **INBOUND EDI DATABANK REPROCESS** parameter to **Yes** in the 6.0 environment.

Note: Program EBDI001 issues an acceptable return code of 04 when no data is processed.

- After the job has successfully completed, execute the **EDID301** (Inbound EDI Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK INBOUND-EDI** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBE60I**.

After the job has successfully completed, continue with **Step 5e**, Convert Outbound EDI Databank files.

Step 5e Convert Outbound EDI Databank files.

Note: If you are not using the outbound EDI databank, skip this step and continue with **Step 5f**, Verify Databank subsystem conversion.

The following functions are intended to update your 6.0 Outbound EDI databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.0 job streams to accomplish this.

If your users do not apply online changes to your Outbound EDI Databank files, you may skip the execution of EDID205 and proceed to the execution of EDID201. **Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.0 databank files.** Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.0 JCL and files, execute the **EDID205** (Outbound EDI Databank Extract) program by setting the **APPLY-UPDATES-ONLY** parameter to **Yes** in the 6.0 environment. You must add this parameter to the current list supplied with the program.
- After the job has successfully completed, execute the **EDID201** (Outbound EDI Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK OUTBOUND-EDI** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBE600**.

After the job has successfully completed, continue with **Step 5f**, Verify Databank subsystem conversion.

Step 5f Verify Databank subsystem conversion.

Check the box next to each task as you complete it.

- Enable these files in the Release 6.4 CICS environment:
SIMIAA, SIMIACA, SIMIAP, SIMIAS, SIMIEA, SIMIECA, SIMIEL, SIMIEP,
SIMIES, SIMOAA, SIMOACA, SIMOAL, SIMOAP, SIMOAS, SIMOEA,
SIMOECA, SIMOEP, SIMOES, SIMOLF, SIMQ091, SIMQ093, SIMQ095,
SIMQ097

Note: You can accomplish the following tasks in a manner similar to tasks presented in the installation verification steps. For more information, see the installation verification procedures in Chapter 4 (if you are processing in Partner/Qualifier mode) or in Chapter 5 (if you are processing in Relationship or Mixed mode).

- View the converted directory records, both inbound and outbound, on the Interchange Directory screen (EDIM254) to verify successful conversion.
- View the converted message store records on the Interchange Display screen (EDIM256) to verify successful conversion.
- Verify that the link between the EDI databanks and the Application databanks functions correctly by reviewing the Message Store on the Document Display screen (EDIM264).

Continue with **Step 6**, Convert Security subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 6 Convert Security subsystem.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNSEC60**.
- Close and disable the **SIMSECR** file in the Release 6.4 CICS environment.
- Submit the **CNSEC60** job.
- After the job has successfully completed, enable the **SIMSECR** file in the Release 6.4 CICS environment.

Continue with **Step 7**, Convert Mapping subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 7 Convert Mapping subsystem.

In this step, you will convert the following files:

- Application Header
- Application Fields
- Application Records
- Application Link
- Transaction Header
- Transaction Segments
- Transaction Elements
- Code Definition
- Code Translation
- Data Translation
- Data Validation

Typically performed by: System Installer

Complete one of the following:

- If you are converting the entire contents of the Release 6.0 mapping files, code tables, and application files to Release 6.4, perform the tasks in **Step 7a**.
- If you are incrementally converting Release 6.0 mapping files to Release 6.4, you must complete one cycle of **Step 7b** through **Step 7f**.

Step 7a Convert entire Mapping subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNMAP60**.
- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit the **CNMAP60** job.
- Enable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Continue with **Step 8**, Convert the Error Message file.

Step 7b Prepare empty VSAM files for incremental conversion.

Note: If you have already executed CNMAP60, continue with **Step 8**, Convert the Error Message file.

Check the box next to each task as you complete it.

- To prepare for the incremental conversion, define empty Release 6.4 Application, Transaction, and Code VSAM files by customizing JCL member **CNMAPDEF**.

Note: You only need to perform this task one time.

- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDE, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

- Submit the **CNMAPDEF** job.

After the job has successfully completed, continue with **Step 7c**, Incrementally convert Application files.

Step 7c Incrementally convert Application files.

Check the box next to each task as you complete it.

- Review the comments in JCL member **CNMAP60A** for the format of the parameters used.
- Close and disable these files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR
- Enter a parameter for each application to convert, or specify a range of Application IDs for conversion SYS030, and then submit the **CNMAP60A** job.

Note: After completing a cycle of the **Step 7b** through **Step 7f**, you can repeat **Step 7c** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR

Note: Path entries SIMAPF1 and SIMAPR1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7d**, Incrementally convert Code files.

Step 7d Incrementally convert Code files.

Check the box next to each task as you complete it.

- Review the comments in JCL member **CNMAP60C** for the format of parameters used. Enter a parameter for each code table to convert or specify a range of code Table IDs for conversion.
- Close and disable these files in the Release 6.4 CICS environment:
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL
- Submit JCL member **CNMAP60C**.

Note: After completing a cycle of the **Step 7b** through **Step 7f**, you can repeat **Step 7d** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL

Note: Path entries SIMCDC1 and SIMCDD1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7e**, Incrementally convert Transaction files.

Step 7e Incrementally convert Transaction files.

Check the box next to each task as you complete it.

- Review the comments in JCL member **CNMAP60T** for the format of parameters used. Enter a parameter for each Transaction ID to convert, or specify a range of Transaction IDs for conversion.
- Close and disable these files in the Release 6.4 CICS environment:
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit JCL member **CNMAP60T**.

Note: After completing a cycle of the **Step 7b** through **Step 7f**, you can repeat **Step 7e** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Note: Path entries SIMTRE1 and SIMTRS1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7f**, Build and populate alternate indexes.

Step 7f Build and populate alternate indexes.

Performing this step builds and populates the alternate keys for Release 6.4 application, codes, and transaction files.

Note: You should only perform this step once during the cycle for **Step 7b** through **Step 7f**. You can skip this step if you have successfully completed it.

At least one record must be written to each of the mapping VSAM files. Review the conversion reports to confirm record counts > 0.

Check the box next to each task as you complete it.

- Customize JCL member **CNMAPAIX**.
- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit the **CNMAPAIX** job.
- After the job has successfully completes, enable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Continue with **Step 8**, Convert the Error Message file.

Completed by: _____

Date: _____ **Time:** _____

Step 8 Convert the Error Message file.*Typically performed by:* System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNMSG60**.
- Close and disable the **SIMERRC** file to the Release 6.4 environment.
- Submit the **CNMSG60** job.
- After the job has successfully completed, enable the **SIMERRC** file in your Release 6.4 CICS environment.

After the job has successfully completed, you have finished the conversion process.

Completed by: _____**Date:** _____ **Time:** _____

Converting the Release 6.1 Files to the Release 6.4 Formats

This section describes the tasks required to convert your files from Gentran:Basic for OS/390 Release 6.1 to Gentran:Basic for zSeries Release 6.4 formats.

Step 1 Convert the Gentran:Basic portion of the System Configuration file.

Note: The configuration records for other Gentran products will be converted at the time of their installation.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNCFG61**.
- Close and disable the **SIMCFG** file in the Release 6.4 CICS environment.
- Submit the **CNCFG61** job.
- After the job has successfully completed, enable the **SIMCFG** file in the Release 6.4 CICS environment.

Continue with **Step 2**, Convert Partner subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 2 Convert Partner subsystem.

In this step, you will convert the following files:

- Partner
- Partner Inbound Control
- Partner Outbound Control

Typically performed by: System Installer

Complete one of the following:

- If you are converting the entire contents of the Release 6.1 partner and control number files to Release 6.4, perform **Step 2a**.
- If you are performing incremental conversion (converting only part of the records at this time), perform **Step 2b** and **Step 2c**.

Step 2a Convert entire Partner subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRT61**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRT61** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB

Continue with **Step 2d**, Convert Partner Cross-Reference file. or **Step 2e**, Convert Partner Relationship file.

Step 2b Prepare empty VSAM for incremental conversion of Partner subsystem.

This step deletes and redefines the Partner subsystem and only needs to be performed one time.

Note: If you have already submitted CNPRT61, skip **Step 2b** and **Step 2c**.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRTDEF**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRTDEF** job.
- Verify successful completion.

Continue with **Step 2c**, Incrementally convert Partner subsystem files.

Step 2c Incrementally convert Partner subsystem files.

Note: Repeat this step as often as needed.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRT61P**. Enter a parameter for each partner to be converted or specify a range of partners for conversion.

Note: If you are using the Partner/Qualifier or Mixed processing mode, you will specify partner IDs and qualifiers on the parameters.

If you are using the Relationship processing mode, you will specify user and partner IDs on the parameters.

- If necessary, close and disable these files in the Release 6.4 CICS environment: SIMPART, SIMPOTB, and SIMPINB.
- Submit the **CNPRT61P** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB

Continue with **Step 2d**, Convert Partner Cross-Reference file.

Step 2d Convert Partner Cross-Reference file.

Note: If you are using the Relationship processing mode, skip this step and proceed to **Step 2e**, Convert Partner Relationship file.

Check the box next to each task as you complete it.

- Customize JCL member **CNXRF61**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPREF and SIMPREF1
- Submit the **CNXRF61** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPREF and SIMPREF1

Continue with **Step 3**, Convert Standards subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 2e Convert Partner Relationship file.

Note: If you are not using the Relationship processing mode, skip this step and proceed to **Step 3**, Convert Standards subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRL61**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPREL and SIMPREL1
- Submit the **CNPRL61** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPREL and SIMPREL1

Continue with **Step 3**, Convert Standards subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 3 Convert Standards subsystem.

Note: As of **D 00A** for EDIFACT and **004030** for ASC X12, repeating data elements are part of the standard. If you plan to use the Repeating Element feature, we recommend that you reload these versions from your Release 6.4 standards.

In this step, you will convert the following files:

- Version
- Transaction
- Segment
- Segment Description
- Element
- Element Description
- Dictionary
- Activity
- Code (four files)
- Association

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNSTD61**.
- Close and disable these Standards files in the Release 6.4 CICS environment:
SIMSACT, SIMSASC, SIMSCD1, SIMSCD2, SIMSCD3, SIMSCD4, SIMSDIC, SIMSELD, SIMSELE, SIMSSEG, SIMSSGD, SIMSTRN, SIMSVR
- Submit the **CNSTD61** job.
- After the job has successfully completed, enable these Standards files in the Release 6.4 CICS environment:
SIMSACT, SIMSASC, SIMSCD1, SIMSCD2, SIMSCD3, SIMSCD4, SIMSDIC, SIMSELD, SIMSELE, SIMSSEG, SIMSSGD, SIMSTRN, SIMSVR

Continue with **Step 4**, Create Optimized Standards Table file.

Completed by: _____

Date: _____ **Time:** _____

Step 4 Create Optimized Standards Table file.

The Optimized Standards Table file is a VSAM data set that is used by the inbound and outbound Editor programs to perform EDI compliance checking. The information to build this file is extracted from the online Standards files.

Note: You must run this job each time you make changes to the Standards files.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- In the Standards Maintenance subsystem, navigate to the Transactions in Use screen and select the version and transaction parameter value combinations that meet your requirements.

Note: You do not need to reset previously set parameter values.

- Customize and submit JCL member **EXEC030**.

Continue with **Step 5**, Convert Databank subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 5 Convert Databank subsystem.

Before converting to Release 6.4, you must update Release 6.1 databank files. The files to update and convert include the following:

- Directory
- Message Store
- Pending
- Change Audit
- Link
- Archive
- Queue

This step of the conversion process is divided into substeps. The following table describes where each substep begins.

If you are converting...	See...
<i>Convert Files to 6.4</i>	
<i>Miscellaneous Databank Files</i>	Step 5a
<i>Application Databank Files</i>	
Inbound application databank only	Step 5b
Outbound application databank only	Step 5c
<i>EDI Databank Files</i>	
Inbound EDI databank only	Step 5d
Outbound EDI databank only	Step 5e

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Before running these conversions, close and disable these Databank files in the Release 6.4 CICS environment:
- SIMIAA, SIMIACA, SIMIAP, SIMIAS, SIMIEA, SIMIECA, SIMIEL, SIMIEP, SIMIES, SIMOAA, SIMOACA, SIMOAL, SIMOAP, SIMOAS, SIMOEA, SIMOECA, SIMOEP, SIMOES, SIMOLF, SIMQ091, SIMQ093, SIMQ095, SIMQ097

Continue with **Step 5a**, Convert Miscellaneous Databank files.

Step 5a Convert Miscellaneous Databank files.

Check the box next to each task as you complete it.

- Customize and submit JCL member **CNDBM**.
- Verify successful completion.

Continue with **Step 5b**, Convert Inbound Application Databank files.

Step 5b Convert Inbound Application Databank files.

Note: If you are not using the inbound application databank, skip this step and continue with **Step 5c**, Convert Outbound Application Databank files.

The following tasks are intended to update your 6.1 Inbound Application databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.1 job streams to accomplish this.

If your users do not apply online changes to your Inbound Application Databank files, you may skip the execution of EDID405 and proceed to the execution of EDID401.

Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.1 databank files. Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.1 JCL and files, execute the **EDID405** (Inbound Application Databank Extract) program by setting the **APPLY-UPDATES-ONLY** parameter to **Yes** in the 6.1 environment. You must add this parameter to the current list supplied with the program.
- After the job has successfully completed, execute the **EDID401** (Inbound Application Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK INBOUND-APPLICATION** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit the **CNDBA61I** job.

After the job has successfully completed, continue with **Step 5c**, Convert Outbound Application Databank files.

Step 5c Convert Outbound Application Databank files.

Note: If you are not using the outbound application databank, skip this step and continue with **Step 5d**, Convert Inbound EDI Databank files.

The following tasks are intended to update your 6.1 Outbound Application databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.1 job streams to accomplish this.

If your users do not apply online changes to your Outbound Application Databank files, you may skip the execution of EBDI042 and proceed to the execution of EDID101.

Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.1 databank files. Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.1 JCL and files, execute the **EBDI042** (Outbound Data Mapping) program by setting the **DATABANK REPROCESS** (column 38 of SYS001) parameter to **Y** in the 6.1 environment.

Note: The EBDI042 program issues an acceptable return code of 08 if no data is processed.

- After the job has successfully completed, execute the **EDID101** (Outbound Application Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK OUTBOUND-APPLICATION** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBA610**.

After the job has successfully completed, continue with **Step 5d**, Convert Inbound EDI Databank files.

Step 5d Convert Inbound EDI Databank files.

Note: If you are not using the inbound EDI databank, skip this step and continue with **Step 5e**, Convert Outbound EDI Databank files.

The following tasks are intended to update your 6.1 Inbound EDI databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.1 job streams to accomplish this.

If you do not apply online changes to your Inbound EDI Databank files, you may skip the execution of EBDI001 and proceed to the execution of EDID301. **Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.1 databank files.** Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.1 JCL and files, execute the **EBDI001** (Inbound Editor) program by setting the **INBOUND EDI DATABANK REPROCESS** parameter to **Yes** in the 6.1 environment.

Note: Program EBDI001 issues an acceptable return code of 04 when no data is processed.

- After the job has successfully completed, execute the **EDID301** (Inbound EDI Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK INBOUND-EDI** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBE61I**.

After the job has successfully completed, continue with **Step 5e**, Convert Outbound EDI Databank files.

Step 5e Convert Outbound EDI Databank files.

Note: If you are not using the outbound EDI databank, skip this step and continue with **Step 5f**, Verify Databank subsystem conversion.

The following functions are intended to update your 6.1 Outbound EDI databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.1 job streams to accomplish this.

If your users do not apply online changes to your Outbound EDI Databank files, you may skip the execution of EDID205 and proceed to the execution of EDID201. **Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.1 databank files.** Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.1 JCL and files, execute the **EDID205** (Outbound EDI Databank Extract) program by setting the **APPLY-UPDATES-ONLY** parameter to **Yes** in the 6.1 environment. You must add this parameter to the current list supplied with the program.
- After the job has successfully completed, execute the **EDID201** (Outbound EDI Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK OUTBOUND-EDI** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBE610**.

After the job has successfully completed, continue with **Step 5f**, Verify Databank subsystem conversion.

Step 5f Verify Databank subsystem conversion.

Check the box next to each task as you complete it.

- Enable these files in the Release 6.4 CICS environment:
SIMIAA, SIMIACA, SIMIAP, SIMIAS, SIMIEA, SIMIECA, SIMIEL, SIMIEP,
SIMIES, SIMOAA, SIMOACA, SIMOAL, SIMOAP, SIMOAS, SIMOEA,
SIMOECA, SIMOEP, SIMOES, SIMOLF, SIMQ091, SIMQ093, SIMQ095,
SIMQ097

Note: You can accomplish the following tasks in a manner similar to tasks presented in the installation verification steps. For more information, see the installation verification procedures in Chapter 4 (if you are processing in Partner/Qualifier mode) or in Chapter 5 (if you are processing in Relationship or Mixed mode).

- View the converted directory records, both inbound and outbound, on the Interchange Directory screen (EDIM254) to verify successful conversion.
- View the converted message store records on the Interchange Display screen (EDIM256) to verify successful conversion.
- Verify that the link between the EDI databanks and the Application databanks functions correctly by reviewing the Message Store on the Document Display screen (EDIM264).

Continue with **Step 6**, Convert Security subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 6 Convert Security subsystem.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNSEC61**.
- Close and disable the **SIMSECR** file in the Release 6.4 CICS Environment.
- Submit the **CNSEC61** job.
- After the job has successfully completed, enable the **SIMSECR** file in the Release 6.4 CICS environment.

Continue with **Step 7**, Convert Mapping subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 7 Convert Mapping subsystem.

In this step, you will convert the following files:

- Application Header
- Application Fields
- Application Records
- Application Link
- Transaction Header
- Transaction Segments
- Transaction Elements
- Code Definition
- Code Translation
- Data Translation
- Data Validation

Typically performed by: System Installer

Complete one of the following:

- If you are converting the entire contents of the Release 6.1 mapping files, code tables, and application files to Release 6.4, perform the tasks in **Step 7a**.
- If you are incrementally converting Release 6.1 mapping files to Release 6.4, you must complete one cycle of **Step 7b** through **Step 7f**.

Step 7a Convert entire Mapping subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNMAP61**.
- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit the **CNMAP61** job.
- Enable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Continue with **Step 8**, Convert the Error Message file.

Step 7b Prepare empty VSAM files for incremental conversion.

Note: If you have already executed CNMAP61, continue with **Step 8**, Convert the Error Message file.

Check the box next to each task as you complete it.

- To prepare for the incremental conversion, define empty Release 6.4 Application, Transaction, and Code VSAM files by customizing JCL member **CNMAPDEF**.

Note: You only need to perform this task one time.

- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDE, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

- Submit the **CNMAPDEF** job.

After the job has successfully completed, continue with **Step 7c**, Incrementally convert Application files.

Step 7c Incrementally convert Application files.

Check the box next to each task as you complete it.

- Review the comments in JCL member **CNMAP61A** for the format of the parameters used.
- Close and disable these files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR
- Enter a parameter for each application to convert, or specify a range of Application IDs for conversion SYS030, and then submit the **CNMAP61A** job.

Note: After completing a cycle of the **Step 7b** through **Step 7f**, you can repeat **Step 7c** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR

Note: Path entries SIMAPF1 and SIMAPR1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7d**, Incrementally convert Code files.

Step 7d Incrementally convert Code files.

Check the box next to each task as you complete it.

- Review the comments in JCL member **CNMAP61C** for the format of parameters used. Enter a parameter for each code table to convert, or specify a range of code Table IDs for conversion.
- Close and disable these files in the Release 6.4 CICS environment:
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL
- Submit JCL member **CNMAP61C**.

Note: After completing a cycle of the **Step 7b** through **Step 7f**, you can repeat **Step 7d** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL

Note: Path entries SIMCDC1 and SIMCDD1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7e**, Incrementally convert Transaction files.

Step 7e Incrementally convert Transaction files.

Check the box next to each task as you complete it.

- Review the comments in JCL member **CNMAP61T** for the format of parameters used. Enter a parameter for each Transaction ID to convert, or specify a range of Transaction IDs for conversion.
- Close and disable these files in the Release 6.4 CICS environment:
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit JCL member **CNMAP61T**.

Note: After completing a cycle of **Step 7b** through **Step 7f**, repeat **Step 7e** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Note: Path entries SIMTRE1 and SIMTRS1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7f**, Build and populate alternate indexes.

Step 7f Build and populate alternate indexes.

Performing this step builds and populates the alternate keys for Release 6.4 application, codes, and transaction files.

Note: You should only perform this step once during the cycle for **Step 7b** through **Step 7f**. You can skip this step if you have successfully completed it.

At least one record must be written to each of the mapping VSAM files. Review the conversion reports to confirm record counts > 0.

Check the box next to each task as you complete it.

- Customize JCL member **CNMAPAIX**.
- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit the **CNMAPAIX** job.
- After the job has successfully completes, enable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Continue with **Step 8**, Convert the Error Message file.

Completed by: _____

Date: _____ **Time:** _____

Step 8 Convert the Error Message file.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNMSG61**.
- Close and disable the **SIMERRC** file to the Release 6.4 environment.
- Submit the **CNMSG61** job.
- After the job has successfully completed, enable the **SIMERRC** file in your Release 6.4 CICS environment.

After the job has successfully completed, you have finished the conversion process.

Completed by: _____

Date: _____ **Time:** _____

Converting the Release 6.2 Files to the Release 6.4 Formats

This section describes the tasks required to convert your files from Gentran:Basic for zSeries Release 6.2 to Gentran:Basic for zSeries Release 6.4 formats.

Step 1 Convert the Gentran:Basic portion of the System Configuration file.

Note: The configuration records for other Gentran products will be converted at the time of their installation.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNCFG62**.
- Close and disable the **SIMCFG** file in the Release 6.4 CICS environment.
- Submit the **CNCFG62** job.
- After the job has successfully completed, enable the **SIMCFG** file in the Release 6.4 CICS environment.

Continue with **Step 2**, Convert Partner subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 2 Convert Partner subsystem.

In this step you will convert the following files:

- Partner
- Partner Inbound Control
- Partner Outbound Control

Typically performed by: System Installer

Complete one of the following:

- If you are converting the entire contents of the Release 6.2 partner and control number files to Release 6.4, perform **Step 2a**.
- If you are performing incremental conversion (i.e., converting only part of the records at this time), perform **Step 2b** and **Step 2c**.

Step 2a Convert entire Partner subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRT62**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRT62** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB

Continue with **Step 2d**, Convert Partner Cross-reference file. or **Step 2e**, Convert Partner Relationship file.

Step 2b Prepare empty VSAM for incremental conversion of Partner subsystem.

This step deletes and redefines the Partner subsystem and only needs to be performed one time.

Note: If you have already submitted CNPRT62, skip **Step 2b** and **Step 2c**.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRTDEF**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRTDEF** job.
- Verify successful completion.

Continue with **Step 2c**, Incrementally convert Partner subsystem files.

Step 2c Incrementally convert Partner subsystem files.

Note: Repeat this step as often as needed.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRT62P**. Enter a parameter for each partner to be converted or specify a range of partners for conversion.

Note: If you are using the Partner/Qualifier or Mixed processing mode, you will specify partner IDs and qualifiers on the parameters.

If you are using the Relationship processing mode, you will specify user and partner IDs on the parameters.

- If necessary, close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRT62P** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB

Continue with **Step 2d**, Convert Partner Cross-reference file.

Step 2d Convert Partner Cross-reference file.

Note: If you are using the Relationship processing mode, skip this step and proceed to **Step 2e**, Convert Partner Relationship file.

Check the box next to each task as you complete it.

- Customize JCL member **CNXRF62**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPREF and SIMPREF1
- Submit the **CNXRF62** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPREF and SIMPREF1

Continue with **Step 3**, Convert Standards subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 2e Convert Partner Relationship file.

Note: If you are not using the Relationship processing mode, skip this step and proceed to **Step 3**, Convert Standards subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRL62**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPREL and SIMPREL1
- Submit the **CNPRL62** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPREL and SIMPREL1

Continue with **Step 3**, Convert Standards subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 3 Convert Standards subsystem.

Note: As of **D 00A** for EDIFACT and **004030** for ASC X12, repeating data elements are part of the standard. If you plan to use the Repeating Element feature, we recommend that you reload these versions from your Release 6.4 standards.

In this step, you will convert files:

- Version
- Transaction
- Segment
- Segment Description
- Element
- Element Description
- Dictionary
- Activity
- Code (four files)
- Association

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNSTD62**.
- Close and disable these Standards files in the Release 6.4 CICS environment:
SIMSACT, SIMSASC, SIMSCD1, SIMSCD2, SIMSCD3, SIMSCD4, SIMSDIC, SIMSELD, SIMSELE, SIMSSEG, SIMSSGD, SIMSTRN, SIMSVR
- Submit the **CNSTD62** job.
- After the job has successfully completed, enable these Standards files in the Release 6.4 CICS environment:
SIMSACT, SIMSASC, SIMSCD1, SIMSCD2, SIMSCD3, SIMSCD4, SIMSDIC, SIMSELD, SIMSELE, SIMSSEG, SIMSSGD, SIMSTRN, SIMSVR

Continue with **Step 4**, Create Optimized Standards Table file.

Completed by: _____

Date: _____ **Time:** _____

Step 4 Create Optimized Standards Table file.

The Optimized Standards Table file is a VSAM data set that is used by the inbound and outbound Editor programs to perform EDI compliance checking. The information to build this file is extracted from the online Standards files.

Note: You must run this job each time you make changes to the Standards files.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- In the Standards Maintenance subsystem, navigate to the Transactions in Use screen and select the version and transaction parameter value combinations that meet your requirements.

Note: You do not need to reset previously set parameter values.

- Customize and submit JCL member **EXEC030**.

Continue with **Step 5**, Convert Databank subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 5 Convert Databank subsystem.

Before converting to Release 6.4, you must update Release 6.2 databank files. The files to update and convert include the following:

- Directory
- Message Store
- Pending
- Change Audit
- Link
- Archive
- Queue

This step of the conversion process is divided into substeps. The following table describes where each substep begins.

If you are converting...	See...
<i>Convert Files to 6.4</i>	
<i>Miscellaneous Databank Files</i>	Step 5a
<i>Application Databank Files</i>	
Inbound application databank only	Step 5b
Outbound application databank only	Step 5c
<i>EDI Databank Files</i>	
Inbound EDI databank only	Step 5d
Outbound EDI databank only	Step 5e

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Before running these conversions, close and disable these Databank files in the Release 6.4 CICS environment:
 SIMIAA, SIMIACA, SIMIAP, SIMIAS, SIMIEA, SIMIECA, SIMIEL, SIMIEP,
 SIMIES, SIMOAA, SIMOACA, SIMOAL, SIMOAP, SIMOAS, SIMOEA,
 SIMOECA, SIMOEP, SIMOES, SIMOLF, SIMQ091, SIMQ093, SIMQ095,
 SIMQ097

Continue with **Step 5a**, Convert Miscellaneous Databank files.

Step 5a Convert Miscellaneous Databank files.

Check the box next to each task as you complete it.

- Customize and submit JCL member **CNDBM**.
- Verify successful completion.

Continue with **Step 5b**, Convert Inbound Application Databank files.

Step 5b Convert Inbound Application Databank files.

Note: If you are not using the inbound application databank, skip this step and continue with **Step 5c**, Convert Outbound Application Databank files.

The following tasks are intended to update your 6.2 Inbound Application databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.2 job streams to accomplish this.

If your users do not apply online changes to your Inbound Application Databank files, you may skip the execution of EDID405 and proceed to the execution of EDID401.

Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.2 databank files. Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.2 JCL and files, execute the **EDID405** (Inbound Application Databank Extract) program by setting the **APPLY-UPDATES-ONLY** parameter to **Yes** in the 6.2 environment. You must add this parameter to the current list supplied with the program.
- After the job has successfully completed, execute the **EDID401** (Inbound Application Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK INBOUND-APPLICATION** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit the **CNDBA62I** job.

After the job has successfully completed, continue with **Step 5c**, Convert Outbound Application Databank files.

Step 5c Convert Outbound Application Databank files.

Note: If you are not using the outbound application databank, skip this step and continue with **Step 5d**, Convert Inbound EDI Databank files.

The following tasks are intended to update your 6.2 Outbound Application databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.2 job streams to accomplish this.

If your users do not apply online changes to your Outbound Application Databank files, you may skip the execution of EBDI042 and proceed to the execution of EDID101.

Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.2 databank files. Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.2 JCL and files, execute the **EBDI042** (Outbound Data Mapping) program by setting the **DATABANK REPROCESS** (column 38 of SYS001) parameter to **Y** in the 6.2 environment.

Note: The EBDI042 program issues an acceptable return code of 08 if no data is processed.

- After the job has successfully completed, execute the **EDID101** (Outbound Application Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK OUTBOUND-APPLICATION** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBA62O**.

After the job has successfully completed, continue with **Step 5d**, Convert Inbound EDI Databank files.

Step 5d Convert Inbound EDI Databank files.

Note: If you are not using the inbound EDI databank, skip this step and continue with **Step 5e**, Convert Outbound EDI Databank files.

The following tasks are intended to update your 6.2 Inbound EDI databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.2 job streams to accomplish this.

If your users do not apply online changes to your Inbound EDI Databank files, you may skip the execution of EBDI001 and proceed to the execution of EDID301. **Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.2 databank files.** Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.2 JCL and files, execute the **EBDI001** (Inbound Editor) program by setting the **INBOUND EDI DATABANK REPROCESS** parameter to **Yes** in the 6.2 environment.

Note: Program EBDI001 issues an acceptable return code of 04 when no data is processed.

- After the job has successfully completed, execute the **EDID301** (Inbound EDI Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK INBOUND-EDI** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBE62I**.

After the job has successfully completed, continue with **Step 5e**, Convert Outbound EDI Databank files.

Step 5e Convert Outbound EDI Databank files.

Note: If you are not using the outbound EDI databank, skip this step and continue with **Step 5f**, Verify Databank subsystem conversion.

The following functions are intended to update your 6.2 Outbound EDI databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.2 job streams to accomplish this.

If your users do not apply online changes to your Outbound EDI Databank files, you may skip the execution of EDID205 and proceed to the execution of EDID201. **Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.2 databank files.** Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.2 JCL and files, execute the **EDID205** (Outbound EDI Databank Extract) program by setting the **APPLY-UPDATES-ONLY** parameter to **Yes** in the 6.2 environment. You must add this parameter to the current list supplied with the program.
- After the job has successfully completed, execute the **EDID201** (Outbound EDI Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK OUTBOUND-EDI** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBE620**.

After the job has successfully completed, continue with **Step 5f**, Verify Databank subsystem conversion.

Step 5f Verify Databank subsystem conversion.

Check the box next to each task as you complete it.

- Enable these files in the Release 6.4 CICS environment:
SIMIAA, SIMIACA, SIMIAP, SIMIAS, SIMIEA, SIMIECA, SIMIEL, SIMIEP,
SIMIES, SIMOAA, SIMOACA, SIMOAL, SIMOAP, SIMOAS, SIMOEA,
SIMOECA, SIMOEP, SIMOES, SIMOLF, SIMQ091, SIMQ093, SIMQ095,
SIMQ097

Note: You can accomplish the following tasks in a manner similar to tasks presented in the installation verification steps. For more information, see the installation verification procedures in Chapter 4 (if you are processing in Partner/Qualifier mode) or in Chapter 5 (if you are processing in Relationship or Mixed mode).

- View the converted directory records, both inbound and outbound, on the Interchange Directory screen (EDIM254) to verify successful conversion.
- View the converted message store records on the Interchange Display screen (EDIM256) to verify successful conversion.
- Verify that the link between the EDI databanks and the Application databanks functions correctly by reviewing the Message Store on the Document Display screen (EDIM264).

Continue with **Step 6**, Convert Security subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 6 Convert Security subsystem.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNSEC62**.
- Close and disable the **SIMSECR** file in the Release 6.4 CICS Environment.
- Submit the **CNSEC62** job.
- After the job has successfully completed, enable the **SIMSECR** file in the Release 6.4 CICS environment.

Continue with **Step 7**, Convert Mapping subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 7 Convert Mapping subsystem.

In this step, you will convert the following files:

- Application Header
- Application Fields
- Application Records
- Application Link
- Transaction Header
- Transaction Segments
- Transaction Elements
- Code Definition
- Code Translation
- Data Translation
- Data Validation

Typically performed by: System Installer

Complete one of the following:

- If you are converting the entire contents of the Release 6.2 mapping files, code tables, and application files to Release 6.4, perform the tasks in **Step 7a**.
- If you are incrementally converting Release 6.2 mapping files to Release 6.4, you must complete one cycle of **Step 7b** through **Step 7f**.

Step 7a Convert entire Mapping subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNMAP62**.
- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit the **CNMAP62** job.
- Enable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Continue with **Step 8**, Convert the Error Message file.

Step 7b Prepare empty VSAM files for incremental conversion.

Note: If you have already executed CNMAP62, continue with **Step 8**, Convert the Error Message file.

Check the box next to each task as you complete it.

- To prepare for the incremental conversion, define empty Release 6.4 Application, Transaction, and Code VSAM files by customizing JCL member **CNMAPDEF**.

Note: You only need to perform this task one time.

- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

- Submit the **CNMAPDEF** job.

After the job has successfully completed, continue with **Step 7c**, Incrementally convert Application files.

Step 7c Incrementally convert Application files.

Check the box next to each task as you complete it.

- Review the comments in JCL member **CNMAP62A** for the format of the parameters used.
- Close and disable these files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR
- Enter a parameter for each application to convert, or specify a range of Application IDs for conversion SYS030, and then submit the **CNMAP62A** job.

Note: After completing a cycle of the **Step 7b** through **Step 7f**, you can repeat **Step 7c** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR

Note: Path entries SIMAPF1 and SIMAPR1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7d**, Incrementally convert Code files.

Step 7d Incrementally convert Code files.

Check the box next to each task as you complete it.

- Review the comments in the JCL member **CNMAP62C** for the format of parameters used. Enter a parameter for each code table to convert, or specify a range of code Table IDs for conversion.
- Close and disable these files in the Release 6.4 CICS environment:
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL
- Submit JCL member **CNMAP62C**.

Note: After completing a cycle of the **Step 7b** through **Step 7f**, you can repeat **Step 7d** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL

Note: Path entries SIMCDC1 and SIMCDD1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7e**, Incrementally convert Transaction files.

Step 7e Incrementally convert Transaction files.

Check the box next to each task as you complete it.

- Review the comments in the JCL member **CNMAP62T** for the format of parameters used. Enter a parameter for each Transaction ID to convert, or specify a range of Transaction IDs for conversion.
- Close and disable these files in the Release 6.4 CICS environment:
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit JCL member **CNMAP62T**.

Note: After completing a cycle of **Step 7b** through **Step 7f**, repeat **Step 7e** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Note: Path entries SIMTRE1 and SIMTRS1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7f**, Build and populate alternate indexes.

Step 7f Build and populate alternate indexes.

Performing this step builds and populates the alternate keys for Release 6.4 application, codes, and transaction files.

Note: You should only perform this step once during the cycle for **Step 7b** through **Step 7f**. You can skip this step if you have successfully completed it.

At least one record must be written to each of the mapping VSAM files. Review the conversion reports to confirm record counts > 0.

Check the box next to each task as you complete it.

- Customize JCL member **CNMAPAIX**.
- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit the **CNMAPAIX** job.
- After the job has successfully completes, enable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Continue with **Step 8**, Convert the Error Message file.

Completed by: _____

Date: _____ **Time:** _____

Step 8 Convert the Error Message file.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNMSG62**.
- Close and disable the **SIMERRC** file to the Release 6.4 environment.
- Submit the **CNMSG62** job.
- After the job has successfully completed, enable the **SIMERRC** file in your Release 6.4 CICS environment.

After the job has successfully completed, you have finished the conversion process.

Completed by: _____

Date: _____ **Time:** _____

Converting the Release 6.3 Files to the Release 6.4 Formats

This section describes the tasks required to convert your files from Gentran:Basic for zSeries Release 6.3 to Gentran:Basic for zSeries Release 6.4 formats.

Step 1 Convert the Gentran:Basic portion of the System Configuration file.

Note: The configuration records for other Gentran products will be converted at the time of their installation.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNCFG63**.
- Close and disable the **SIMCFG** file in the Release 6.4 CICS environment.
- Submit the **CNCFG63** job.
- After the job has successfully completed, enable the **SIMCFG** file in the Release 6.4 CICS environment.

Continue with **Step 2**, Convert Partner subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 2 Convert Partner subsystem.

In this step you will convert the following files:

- Partner
- Partner Inbound Control
- Partner Outbound Control

Typically performed by: System Installer

Complete one of the following:

- If you are converting the entire contents of the Release 6.3 partner and control number files to Release 6.4, perform **Step 2a**.
- If you are performing incremental conversion (i.e., converting only part of the records at this time), perform **Step 2b** and **Step 2c**.

Step 2a Convert entire Partner subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRT63**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRT63** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB

Continue with **Step 2d**, Convert Partner Cross-reference file. or **Step 2e**, Convert Partner Relationship file.

Step 2b Prepare empty VSAM for incremental conversion of Partner subsystem.

This step deletes and redefines the Partner subsystem and only needs to be performed one time.

Note: If you have already submitted CNPRT63, skip **Step 2b** and **Step 2c**.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRTDEF**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRTDEF** job.
- Verify successful completion.

Continue with **Step 2c**, Incrementally convert Partner subsystem files.

Step 2c Incrementally convert Partner subsystem files.

Note: Repeat this step as often as needed.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRT63P**. Enter a parameter for each partner to be converted or specify a range of partners for conversion.

Note: If you are using the Partner/Qualifier or Mixed processing mode, you will specify partner IDs and qualifiers on the parameters.

If you are using the Relationship processing mode, you will specify user and partner IDs on the parameters.

- If necessary, close and disable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB
- Submit the **CNPRT63P** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPART, SIMPOTB, SIMPINB

Continue with **Step 2d**, Convert Partner Cross-reference file.

Step 2d Convert Partner Cross-reference file.

Note: If you are using the Relationship processing mode, skip this step and proceed to **Step 2e**, Convert Partner Relationship file.

Check the box next to each task as you complete it.

- Customize JCL member **CNXRF63**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPREF and SIMPREF1
- Submit the **CNXRF63** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPREF and SIMPREF1

Continue with **Step 3**, Convert Standards subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 2e Convert Partner Relationship file.

Note: If you are not using the Relationship processing mode, skip this step and proceed to **Step 3**, Convert Standards subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNPRL63**.
- Close and disable these files in the Release 6.4 CICS environment:
SIMPREL and SIMPREL1
- Submit the **CNPRL63** job.
- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMPREL and SIMPREL1

Continue with **Step 3**, Convert Standards subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 3 Convert Standards subsystem.

Note: As of **D 00A** for EDIFACT and **004030** for ASC X12, repeating data elements are part of the standard. If you plan to use the Repeating Element feature, we recommend that you reload these versions from your Release 6.4 standards.

In this step, you will convert files:

- Version
- Transaction
- Segment
- Segment Description
- Element
- Element Description
- Dictionary
- Activity
- Code (four files)
- Association

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNSTD63**.
- Close and disable these Standards files in the Release 6.4 CICS environment:
SIMSACT, SIMSASC, SIMSCD1, SIMSCD2, SIMSCD3, SIMSCD4, SIMSDIC, SIMSELD, SIMSELE, SIMSSEG, SIMSSGD, SIMSTRN, SIMSVR
- Submit the **CNSTD63** job.
- After the job has successfully completed, enable these Standards files in the Release 6.4 CICS environment:
SIMSACT, SIMSASC, SIMSCD1, SIMSCD2, SIMSCD3, SIMSCD4, SIMSDIC, SIMSELD, SIMSELE, SIMSSEG, SIMSSGD, SIMSTRN, SIMSVR

Continue with **Step 4**, Create Optimized Standards Table file.

Completed by: _____

Date: _____ **Time:** _____

Step 4 Create Optimized Standards Table file.

The Optimized Standards Table file is a VSAM data set that is used by the inbound and outbound Editor programs to perform EDI compliance checking. The information to build this file is extracted from the online Standards files.

Note: You must run this job each time you make changes to the Standards files.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- In the Standards Maintenance subsystem, navigate to the Transactions in Use screen and select the version and transaction parameter value combinations that meet your requirements.

Note: You do not need to reset previously set parameter values.

- Customize and submit JCL member **EXEC030**.

Continue with **Step 5**, Convert Databank subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 5 Convert Databank subsystem.

Before converting to Release 6.4, you must update Release 6.3 databank files. The files to update and convert include the following:

- Directory
- Message Store
- Pending
- Change Audit
- Link
- Archive
- Queue

This step of the conversion process is divided into substeps. The following table describes where each substep begins.

If you are converting...	See...
<i>Convert Files to 6.4</i>	
<i>Miscellaneous Databank Files</i>	Step 5a
<i>Application Databank Files</i>	
Inbound application databank only	Step 5b
Outbound application databank only	Step 5c
<i>EDI Databank Files</i>	
Inbound EDI databank only	Step 5d
Outbound EDI databank only	Step 5e

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Before running these conversions, close and disable these Databank files in the Release 6.4 CICS environment:
 SIMIAA, SIMIACA, SIMIAP, SIMIAS, SIMIEA, SIMIECA, SIMIEL, SIMIEP,
 SIMIES, SIMOAA, SIMOACA, SIMOAL, SIMOAP, SIMOAS, SIMOEA,
 SIMOECA, SIMOEP, SIMOES, SIMOLF, SIMQ091, SIMQ093, SIMQ095,
 SIMQ097

Continue with **Step 5a**, Convert Miscellaneous Databank files.

Step 5a Convert Miscellaneous Databank files.

Check the box next to each task as you complete it.

- Customize and submit JCL member **CNDBM**.
- Verify successful completion.

Continue with **Step 5b**, Convert Inbound Application Databank files.

Step 5b Convert Inbound Application Databank files.

Note: If you are not using the inbound application databank, skip this step and continue with **Step 5c**, Convert Outbound Application Databank files.

The following tasks are intended to update your 6.3 Inbound Application databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.3 job streams to accomplish this.

If your users do not apply online changes to your Inbound Application Databank files or you have enabled concurrent processing, you may skip the execution of EDID405 and proceed to the execution of EDID401. **Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.3 databank files.** Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.3 JCL and files, execute the **EDID405** (Inbound Application Databank Extract) program by setting the **APPLY-UPDATES-ONLY** parameter to **Yes** in the 6.3 environment. You must add this parameter to the current list supplied with the program.
- After the job has successfully completed, execute the **EDID401** (Inbound Application Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK INBOUND-APPLICATION** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit the **CNDBA63I** job.

After the job has successfully completed, continue with **Step 5c**, Convert Outbound Application Databank files.

Step 5c Convert Outbound Application Databank files.

Note: If you are not using the outbound application databank, skip this step and continue with **Step 5d**, Convert Inbound EDI Databank files.

The following tasks are intended to update your 6.3 Outbound Application databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.3 job streams to accomplish this.

If your users do not apply online changes to your Outbound Application Databank files or you have enabled concurrent processing, you may skip the execution of EBDI042 and proceed to the execution of EDID101. **Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.3 databank files.** Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.3 JCL and files, execute the **EBDI042** (Outbound Data Mapping) program by setting the **DATABANK REPROCESS** (column 38 of SYS001) parameter to **Y** in the 6.3 environment.

Note: The EBDI042 program issues an acceptable return code of 08 if no data is processed.

- After the job has successfully completed, execute the **EDID101** (Outbound Application Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK OUTBOUND-APPLICATION** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBA630**.

After the job has successfully completed, continue with **Step 5d**, Convert Inbound EDI Databank files.

Step 5d Convert Inbound EDI Databank files.

Note: If you are not using the inbound EDI databank, skip this step and continue with **Step 5e**, Convert Outbound EDI Databank files.

The following tasks are intended to update your 6.3 Inbound EDI databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.3 job streams to accomplish this.

If your users do not apply online changes to your Inbound EDI Databank files or you have enabled concurrent processing, you may skip the execution of EBDI001 and proceed to the execution of EDID301. **Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.3 databank files.** Your users should be familiar with the procedure.

Check the box next to each task as you complete it.

- Using your 6.3 JCL and files, execute the **EBDI001** (Inbound Editor) program by setting the **INBOUND EDI DATABANK REPROCESS** parameter to **Yes** in the 6.3 environment.

Note: Program EBDI001 issues an acceptable return code of 04 when no data is processed.

- After the job has successfully completed, execute the **EDID301** (Inbound EDI Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK INBOUND-EDI** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBE63I**.

After the job has successfully completed, continue with **Step 5e**, Convert Outbound EDI Databank files.

Step 5e Convert Outbound EDI Databank files.

Note: If you are not using the outbound EDI databank, skip this step and continue with **Step 5f**, Verify Databank subsystem conversion.

The following functions are intended to update your 6.3 Outbound EDI databank files with any outstanding updates that have been made via your online system but may not have been applied physically to the databank files. You will be executing your 6.3 job streams to accomplish this.

If your users do not apply online changes to your Outbound EDI Databank files or you have enabled concurrent processing, you may skip the execution of EDID205 and proceed to the execution of EDID201. **Remember that if you skip this task, your 6.4 databank files may NOT be current with your 6.3 databank files.** Your users should be familiar with the procedure

Check the box next to each task as you complete it.

- Using your 6.3 JCL and files, execute the **EDID205** (Outbound EDI Databank Extract) program by setting the **APPLY-UPDATES-ONLY** parameter to **Yes** in the 6.3 environment. You must add this parameter to the current list supplied with the program.
- After the job has successfully completed, execute the **EDID201** (Outbound EDI Databank Maintenance) program. Run Databank Maintenance in Housekeeping mode with the desired retention period set (nnn days). If you maintain archives, set the **ARCHIVE** parameter to **Yes**.
- After the job has successfully completed, execute the **EDID502** (Databank Change Audit Maintenance) program using the Housekeeping operation with the **DATABANK OUTBOUND-EDI** parameter and the desired retention period parameter specified. If you maintain archives, also specify the **ARCHIVE YES** parameter.
- After the job has successfully completed, submit JCL member **CNDBE630**.

After the job has successfully completed, continue with **Step 5f**, Verify Databank subsystem conversion.

Step 5f Verify Databank subsystem conversion.

Check the box next to each task as you complete it.

- Enable these files in the Release 6.4 CICS environment:
SIMIAA, SIMIACA, SIMIAP, SIMIAS, SIMIEA, SIMIECA, SIMIEL, SIMIEP,
SIMIES, SIMOAA, SIMOACA, SIMOAL, SIMOAP, SIMOAS, SIMOEA,
SIMOECA, SIMOEP, SIMOES, SIMOLF, SIMQ091, SIMQ093, SIMQ095,
SIMQ097

Note: You can accomplish the following tasks in a manner similar to tasks presented in the installation verification steps. For more information, see the installation verification procedures in Chapter 4 (if you are processing in Partner/Qualifier mode) or in Chapter 5 (if you are processing in Relationship or Mixed mode).

- View the converted directory records, both inbound and outbound, on the Interchange Directory screen (EDIM254) to verify successful conversion.
- View the converted message store records on the Interchange Display screen (EDIM256) to verify successful conversion.
- Verify that the link between the EDI databanks and the Application databanks functions correctly by reviewing the Message Store on the Document Display screen (EDIM264).

Continue with **Step 6**, Convert Security subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 6 Convert Security subsystem.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNSEC63**.
- Close and disable the **SIMSECR** file in the Release 6.4 CICS Environment.
- Submit the **CNSEC63** job.
- After the job has successfully completed, enable the **SIMSECR** file in the Release 6.4 CICS environment.

Continue with **Step 7**, Convert Mapping subsystem.

Completed by: _____

Date: _____ **Time:** _____

Step 7 Convert Mapping subsystem.

In this step, you will convert the following files:

- Application Header
- Application Fields
- Application Records
- Application Link
- Transaction Header
- Transaction Segments
- Transaction Elements
- Code Definition
- Code Translation
- Data Translation
- Data Validation

Typically performed by: System Installer

Complete one of the following:

- If you are converting the entire contents of the Release 6.3 mapping files, code tables, and application files to Release 6.4, perform the tasks in **Step 7a**.
- If you are incrementally converting Release 6.3 mapping files to Release 6.4, you must complete one cycle of **Step 7b** through **Step 7f**.

Step 7a Convert entire Mapping subsystem.

Check the box next to each task as you complete it.

- Customize JCL member **CNMAP63**.
- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit the **CNMAP63** job.
- Enable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Continue with **Step 8**, Convert the Error Message file.

Step 7b Prepare empty VSAM files for incremental conversion.

Note: If you have already executed CNMAP63, continue with **Step 8**, Convert the Error Message file.

Check the box next to each task as you complete it.

- To prepare for the incremental conversion, define empty Release 6.4 Application, Transaction, and Code VSAM files by customizing JCL member **CNMAPDEF**.

Note: You only need to perform this task one time.

- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDE, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

- Submit the **CNMAPDEF** job.

After the job has successfully completed, continue with **Step 7c**, Incrementally convert Application files.

Step 7c Incrementally convert Application files.

Check the box next to each task as you complete it.

- Review the comments in JCL member **CNMAP63A** for the format of the parameters used.
- Close and disable these files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR
- Enter a parameter for each application to convert, or specify a range of Application IDs for conversion SYS030, and then submit the **CNMAP63A** job.

Note: After completing a cycle of the **Step 7b** through **Step 7f**, you can repeat **Step 7c** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR

Note: Path entries SIMAPF1 and SIMAPR1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7d**, Incrementally convert Code files.

Step 7d Incrementally convert Code files.

Check the box next to each task as you complete it.

- Review the comments in the JCL member **CNMAP63C** for the format of parameters used. Enter a parameter for each code table to convert, or specify a range of code Table IDs for conversion.
- Close and disable these files in the Release 6.4 CICS environment:
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL
- Submit JCL member **CNMAP63C**.

Note: After completing a cycle of the **Step 7b** through **Step 7f**, you can repeat **Step 7d** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL

Note: Path entries SIMCDC1 and SIMCDD1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7e**, Incrementally convert Transaction files.

Step 7e Incrementally convert Transaction files.

Check the box next to each task as you complete it.

- Review the comments in the JCL member **CNMAP63T** for the format of parameters used. Enter a parameter for each Transaction ID to convert, or specify a range of Transaction IDs for conversion.
- Close and disable these files in the Release 6.4 CICS environment:
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit JCL member **CNMAP63T**.

Note: After completing a cycle of **Step 7b** through **Step 7f**, repeat **Step 7e** as often as needed.

- After the job has successfully completed, enable these files in the Release 6.4 CICS environment:
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Note: Path entries SIMTRE1 and SIMTRS1 may fail on open until the alternate indexes are built in **Step 7f**. This is normal.

Continue with **Step 7f**, Build and populate alternate indexes.

Step 7f Build and populate alternate indexes.

Performing this step builds and populates the alternate keys for Release 6.4 application, codes, and transaction files.

Note: You should only perform this step once during the cycle for **Step 7b** through **Step 7f**. You can skip this step if you have successfully completed it.

At least one record must be written to each of the mapping VSAM files. Review the conversion reports to confirm record counts > 0.

Check the box next to each task as you complete it.

- Customize JCL member **CNMAPAIX**.
- Close and disable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1
- Submit the **CNMAPAIX** job.
- After the job has successfully completes, enable these Mapping files in the Release 6.4 CICS environment:
SIMAPFL, SIMAPF1, SIMAPHD, SIMAPRC, SIMAPR1, SIMAPTR,
SIMCDCD, SIMCDC1, SIMCDDA, SIMCDDF, SIMCDD1, SIMCDVL,
SIMTREL, SIMTRE1, SIMTRHD, SIMTRSG, SIMTRS1

Continue with **Step 8**, Convert the Error Message file.

Completed by: _____

Date: _____ **Time:** _____

Step 8 Convert the Error Message file.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNMSG63**.
- Close and disable the **SIMERRC** file to the Release 6.4 environment.
- Submit the **CNMSG63** job.
- After the job has successfully completed, enable the **SIMERRC** file in your Release 6.4 CICS environment.

Continue with **Step 9**, Convert the Separator Control file.

Completed by: _____

Date: _____ **Time:** _____

Step 9 Convert the Separator Control file.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Customize JCL member **CNSEP63**.
- Close and disable the **SIMRSEP** file to the Release 6.4 environment.
- Submit the **CNSEP63** job.
- After the job has successfully completed, enable the **SIMRSEP** file in your Release 6.4 CICS environment.

After the job has successfully completed, you have finished the conversion process.

Completed by: _____

Date: _____ **Time:** _____

Migrating to Relationship Processing Mode

Overview

This chapter explains the steps required to migrate trading partners from Partner/Qualifier processing mode to Relationship processing mode. Review these steps before you perform the migration and be sure to perform them sequentially.

This chapter is divided into two sets of steps. The first set of steps is for those customers who are new to Gentran and want to use Relationship processing mode. The second set of steps is for existing Gentran customers who are migrating to Relationship mode.

This chapter contains the following topics:

Topic	Page
Relationship Mode Processing	7-2
Introduction.....	7-2
Processing Modes	7-2
The Benefits of Relationship Mode Processing.....	7-2
Choosing to Process in Relationship Mode	7-3
Before You Begin	7-4

Performing Gentran:Basic Maintenance.....	7-52

Relationship Mode Processing

Introduction

To successfully process and exchange EDI data with trading partners, Gentran requires specific information about each trading partner. Whether intra-company or inter-company in nature, you must define and maintain all trading partner relationships through a partner profile in Gentran, on the Partner Maintenance subsystem. This process is known as defining the partner relationship.

Processing Modes

You can define the partner processing relationship in either of two modes:

- **The *Partner/Qualifier* mode**
With the Partner/Qualifier mode, you define a partner profile for each trading partner entity. This includes each entity within your organization and each external trading partner. The two separate partner profiles form a loosely coupled relationship at run time. After run time completion, the relationship no longer exists.

With this method, each trading partner can be used in multiple relationships, so it is convenient when multiple entities within your organization share common trading partners.

- **The *Relationship* mode**
The Relationship mode enables you to address unique considerations for your trading partners and to set up only *one* partner profile for multiple entities, thus creating a more closely coupled relationship. Each relationship is uniquely defined on the partner profile in a user/partner format. In addition to further defining your relationship, you can maintain the relationship after run time completion.

Note: You can select and maintain *either* processing mode through the Configuration subsystem.

See the *Gentran:Basic for zSeries Release 6.4 User's Guide* for more information about setting up partner profiles and processing modes.

The Benefits of Relationship Mode Processing

If you are setting up a profile for a trading partner with one-to-many or many-to-many relationships, you will benefit from using the Relationship processing methodology. For example, your trading partner may require identification of multiple entities within its organization, such as divisions, departments, groups, or locations, when exchanging EDI data. Using Relationship processing mode, you can set up a partner profile to include information that is unique to that association (for example, Receiver ID, control numbers, contacts, data separation, and rejection).

Choosing to Process in Relationship Mode

New and existing Gentran:Basic customers can choose to set up their trading partners using Relationship processing mode. Existing customers must *migrate* trading partners from the existing processing mode: Relationship mode (in Release 6.0) or Partner/Qualifier mode (in any release) to Relationship mode for Release 6.4.

Before migrating, existing customers should consider the following:

- *Release 6.0 Customers using the **Release 6.0 Relationship** mode:*
The Release 6.0 Relationship mode maintains the partner file in Partner/Qualifier mode and the databanks are maintained in Relationship mode.
- *Release 6.0 Customers using **Partner/Qualifier** mode.*
The Release 6.4 Migration process does not support the migration of databanks. Therefore, existing databank information will be lost. You will need to create new databanks if you elect to migrate to the Release 6.4 Relationship mode.

Before You Begin

Before beginning the migration process for partner relationship, new customers should have completed the installation verification process outlined in this guide.

Existing customers should have completed the verification and conversion processes outlined in this guide. To ensure accurate setup, make sure that you have performed parallel testing using your converted Release 6.4 production system. Processing flows in your Release 6.4 system should be parallel with your previous system.

Migration Process for New Customers

When migrating from Partner/Qualifier mode to Relationship mode, you should complete the steps in “Migrating: New Gentran Customers” on page 7-5. These steps define the Partner, Inbound Control, Outbound Control, Partner Relationship, and Database files (which seed the relationship default records) and convert your system configuration and CICS region to partner relationship.

Migration Process for Existing Customers

When migrating your partners to Relationship mode, you have two migration options from which to choose. You can migrate *all* of your trading partners at one time or you can migrate trading partners in groups determined by you (see “Migrating the Partner File” on page 7-41).

We recommend that you set up a separate CICS system image for Relationship mode (see “Establishing Online Environment” in Chapter 3 of this guide for steps to set up a separate CICS system image). This allows you to view and confirm the results of your migrations. On the Configuration Maintenance (EDIM231) screen, you will need to set the Trading Profile Mode flag on the Configuration Record 0 to R for this image (see Appendix C in this guide for further CICS system image instructions).

Migration Process Illustrations

Migrating All Trading Partners

This illustration outlines the steps involved for migrating all partners at one time.

Migrating Trading Partner in Groups

This illustration outlines the steps that will repeat until all partners have been migrated.

Migrating: New Gentran Customers

Note: If you are an existing Gentran customer, proceed to “Migrating: Existing Gentran Customers” on page 7-14.

Step 1 Prepare for migration.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Before running the migration process, close and disable these files where **SIM** represents your three-character system image in your Release 6.4 CICS environment.

- | | | | |
|-----------|-----------|-----------|-----------|
| • SIMPART | • SIMOLF | • SIMOACA | • SIMQ093 |
| • SIMPINB | • SIMIEA | • SIMIEP | • SIMOECA |
| • SIMPOTB | • SIMIECA | • SIMIES | • SIMOAL |
| • SIMQ091 | • SIMIEL | • SIMQ097 | • SIMOEP |
| • SIMIAA | • SIMIAS | • SIMOEA | • SIMOES |
| • SIMIACA | • SIMQ095 | • SIMOAP | |
| • SIMIAP | • SIMOAA | • SIMOAS | |

Completed by: _____

Date: _____ **Time:** _____

Define Partner and Partner Relationship Files

Step 2 Customize JCL member **DEFPARTR** and submit.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text strings **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change space allocations, as needed.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing this enables you to mass-edit data set names.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Define Databank Files

Step 3 Customize JCL member **DEFDB** and submit.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change space allocations, as needed (see the *Gentran:Basic for zSeries Release 6.4 Technical Reference Guide* for calculation information).
- Change data set names as required by your installation. Consider the following:
 - Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing this enables you to mass-edit data set names.
 - Permanent Gentran:Basic files are identified with **VSAM** as the third node of the data set name.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Add Partner Relationship File to CICS

Step 4 Customize JCL member **PRFRDOF**. This member contains the CICS resource definitions for the Partner Relationship file.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Review each definition for your site requirements.
- Globally change the value **SIM** to the three-character system image specified on your Pre-installation Worksheet in Chapter 2.
- Each definition contains the **DSNAME** parameter to specify the names of the data sets to be allocated for the files. You may remove these parameters and instead specify the files using DD statements in the CICS startup JCL.

If you elect to retain the **DSNAME** parameters, you must globally change the data set name high-level qualifier **GENTRAN.V6X4** to the value specified on the Pre-installation Worksheet in Chapter 2.

If you elect to remove the **DSNAME** parameters, JCL member **PRFCICS** contains DD statements that you may use. You must globally change the value **SIM** to the three-character system image specified on the Pre-installation Worksheet in Chapter 2. You must also globally change the data set name high-level qualifier **GENTRAN.V6X4** to the value specified on the Pre-installation Worksheet in Chapter 2.
- If you changed the CICS Group Name on the Pre-installation Worksheet in Chapter 2 from the default value **GENBSC**, globally change the value in the **GROUP** parameter in each definition to the value you are using.
- Review local shared resource Pool IDs for your system. To manage overhead, most Gentran:Basic files are assigned to LSR pools. Files that cannot be installed in a pool use the **LSRPOOLID (NONE)** parameter in the definitions.
- If you are installing into an MRO environment, you will need to uncomment the **KEYLENGTH** and **RECORDSIZE** parameters for each resource definition.

You may also need to uncomment the **REMOTESYSTEM (NAME)** parameter for each resource and change the value **NAME** to the 4-character alphanumeric name of the CICS region where the file resides.

In addition, if you are creating a unique group name for each MRO region, you will need to create a duplicate JCL member for each unique group name.
- Read the comments within the JCL member and follow additional instructions.

Completed by: _____

Date: _____ Time: _____

Step 5

Customize JCL member **DEFPRF**. This member contains the job to define the Partner Relationship file resources in the CICS System Definition file.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change data set names **YOUR . CICS . SDFHLOAD** and **YOUR . CICS . DFHCSD** as required by your installation.
- Change data set names as required by your installation. Change only the first two index levels (**GENTRAN . V6X4**).
- If you are installing into an MRO environment, you may need to run this job multiple times depending on whether or not you are sharing the CSD file among regions and whether or not you are using different group names in each region. If you do need to run the DEFPRF job multiple times, modify the CSD file name, group name, and/or JCL member name to meet your needs.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 6 Remove the Partner Cross-reference file and install the Partner Relationship file.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Back up the Partner Cross-reference file to a sequential file. Delete the VSAM file.
- Log on to CICS as required within your environment to access the CEDA transaction. When you have finished, clear the screen.
- Type the following commands to delete the resources for the Cross-reference file, substituting your three-character system image for **SIM** and substituting your group name for **GENBSC** (if you changed it from **GENBSC**).

```
CEDA DELETE FILE (SIMPREF) GROUP (GENBSC)
```

```
CEDA DELETE FILE (SIMPREF1) GROUP (GENBSC)
```

Check for the **Delete Successful** result from CEDA. When you have finished, press **PF3** and then clear the screen.

If you specified these files to your CICS using DD statements in the CICS startup JCL, the DD statements must also be removed.

- Type the following commands to install the resources for the Partner Relationship file, substituting your three-character system image for **SIM** and substituting your group name for **GENBSC** (if you changed it from **GENBSC**).

```
CEDA INSTALL FILE (SIMPREL) GROUP (GENBSC)
```

```
CEDA INSTALL FILE (SIMPREL1) GROUP (GENBSC)
```

Check for the **Install Successful** result from CEDA. When you have finished, press **PF3** and then clear the screen.

- These members require JCL changes:

- EXEC001
- EXEC002B
- EXEC005
- EXEC006
- EXEC011A
- EXEC011M
- EXEC017
- EXEC019
- EXEC042
- EXEC087
- INBOUND
- OUTBOUND

For each member listed above, make the following JCL changes:

- Delete all DD statements referencing **GENTRAN.V6X4.VSAM.PARTNER.XREF** and **GENTRAN.V6X4.VSAM.PARTNER.XREF.PATH**.

- Uncomment DD statements referencing **GENTRAN.V6X4.VSAM.PARTREL** and **GENTRAN.V6X4.VSAM.PARTREL.PATH**.

Completed by: _____

Date: _____ Time: _____

Step 7 Update the system configuration to Relationship mode.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Enable all files in the Release 6.4 CICS environment.
- In Gentran, select option **4** from the Gentran Main Menu to navigate to the Administrative Maintenance subsystem.
- From the Administrative Maintenance Menu (EDIM210), select option **3** to display the Configuration Directory (EDIM230).

Note: You can also display the Configuration Directory by typing **4 . 3** in the Jump Code field.

- Type **S** in the A (action code) field next to Record Type 0 (On-line Processing Options) and press **PF5** to display the Configuration Maintenance (EDIM231) screen. Press **PF5** again to list more options.
- Type **R** (Relationship) in the Trading Profile Mode field and press **PF10** to update the system.

Completed by: _____

Date: _____ **Time:** _____

Migrating: Existing Gentran Customers

Define Partner Relationship Migration Files

The migration process requires you to create three work VSAM files: User file, Partner Relationship Conversion file, and Data Translation Migration file. The following steps provide instructions for creating these three files. **Do not delete the files until you have completed the migration process.**

Note: If you are a new Gentran customer, skip the rest of this chapter.

Step 1 Customize JCL member **DEFPCNV** and submit.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change space allocations, as needed.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing this enables you to mass-edit data set names.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Step 2 Customize JCL member **DEFDTCNV** and submit.

Note: You only need to perform this step (execute **DEFDTCNV**) if you use partner-specific Data Translation tables in the mapping process. Otherwise, continue with **Step 3**.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing this enables you to mass-edit data set names.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Install CICS Components for Relationship Mode Processing

Before converting from Partner/Qualifier mode to Relationship mode, you must install the necessary components to perform the migration process into your current CICS environment. In this section, you will install and customize JCL and then verify its setup. Steps are also included for customers who have elected to set up a separate CICS system image for Relationship mode.

To install CICS components for partner relationship migration into your current Release 6.4 CICS environment, you need full access to the following items:

- The CICS System Definition file DFHCSD
- The CICS Offline Utility program DFHCSDUP
- The CICS Resource Definition Online transaction CEDA
- The CICS Master Terminal transaction CEMT

It is assumed that a functional CICS region exists and that the system installer has full authorization to access the region and use these items.

Step 3 Customize JCL member **PRMRDOF**. This member contains the CICS resource definitions for the Partner Relationship Migration files.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Review each definition for your site requirements.
- If you skipped **Step 2**, remove the definition for the Data Translation Migration file **SIMTCNV**.
- Globally change the value **SIM** to the three-character system image specified on your Pre-installation Worksheet in Chapter 2.
- Each definition contains the **DSNAME** parameter to specify the names of the data sets to be allocated for the files. You may remove these parameters and instead specify the files using DD statements in the CICS startup JCL.

If you elect to retain the **DSNAME** parameters, you must globally change the data set name high-level qualifier **GENTRAN.V6X4** to the value specified on the Pre-installation Worksheet in Chapter 2.

If you elect to remove the **DSNAME** parameters, JCL member **PRMCICS** contains DD statements that you may use. You must globally change the value **SIM** to the three-character system image specified on the Pre-installation Worksheet in Chapter 2. You must also globally change the data set name high-level qualifier **GENTRAN.V6X4** to the value specified on the Pre-installation Worksheet in Chapter 2.

- Review local shared resource Pool IDs for your system. To manage overhead, most Gentran:Basic files are assigned to LSR pools. Files that cannot be installed in a pool use the **LSRPOOLID (NONE)** parameter in the definitions.

- If you are installing into an MRO environment, you will need to uncomment the **KEYLENGTH** and **RECORDSIZE** parameters for each resource definition.

You may also need to uncomment the **REMOTESYSTEM (NAME)** parameter for each resource and change the value **NAME** to the 4-character alphanumeric name of the CICS region where the file resides.

In addition, if you are creating a unique group name for each MRO region, you will need to create a duplicate JCL member for each unique group name.

- Read the comments within the JCL member and follow additional instructions.

Completed by: _____

Date: _____ Time: _____

Step 4 Customize JCL member **PRMRDOPM**.*Typically performed by:* System Installer

Check the box next to each task as you complete it.

- Review each definition for your site requirements.
- All Partner Relationship Migration CICS applications are identified in this member. Programs and BMS mapsets are included.
- Globally change the value **PIM** to the three-character program image specified on the Pre-installation Worksheet in Chapter 2.
- Read the comments within the JCL member and follow additional instructions.

Completed by: _____

Date: _____ Time: _____

Step 5

Customize JCL member **DEFPRM**. This member contains the job to define the Partner Relationship Migration resources in the CICS System Definition file.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change data set names **YOUR . CICS . SDFHLOAD** and **YOUR . CICS . DFHCSD** as required by your installation.
- Change the data set names as required by your installation. Change only the first two index levels (**GENTRAN . V6X4**).
- If you are defining the Partner Relationship Migration CICS resources in an existing group, you must comment out or remove the **DELETE** step in the JCL. Otherwise, your existing group will be deleted.
- If you are installing into an MRO environment, you may need to run this job multiple times depending on whether or not you are sharing the CSD file among the regions and whether or not you are using different group names in each region. If you do need to run the DEFPRM job multiple times, modify the CSD file name, group name, and/or JCL member names to meet your needs.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 6

Customize JCL member **PRMNAME**. This job will copy and rename all Partner Relationship Migration online CICS programs to reflect the program image.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOL=SER=** to an appropriate volume serial number used at your installation.
- Change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- Globally change the value **PIM** to the three-character program image specified on the Pre-installation worksheet in Chapter 2.
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 7 Install the CICS group.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Log on to CICS as required within your environment to access the CEDA transaction. When you have finished, clear the screen.
- Type the following command to dynamically install the resources. Press **Enter** to invoke the command.

CEDA INSTALL GROUP (GENCVBSC)

Check for the **Install Successful** result from CEDA. When you have finished, press **PF3** and then clear the screen.

- If you defined the Partner Relationship Migration CICS resources in an existing group that is already specified in a list of groups that CICS installs at startup, you may skip the remainder of this step.
- Type the following command to permanently add the group to a list of groups that CICS installs at startup. Substitute your list name for the value **LISTNAME** in the command. Press **Enter** to invoke the command.

CEDA ADD GROUP (GENCVBSC) LIST (LISTNAME)

Check for the **Add Successful** result from CEDA. When you have finished, press **PF3** and then clear the screen.

Completed by: _____

Date: _____ **Time:** _____

Step 8 Verify the CICS installation.

The following commands can be used to confirm a successful installation. Use them to compare each resource to the input in JCL members PRMRDOF and PRMRDOPM as appropriate.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Type the following command to display all the resources in the group. Press **Enter** to invoke the command.

```
CEDA DISPLAY GROUP (GENCVBSC)
```

Review each entry displayed on the screen. When you have finished, press **PF3**, and then clear the screen.

- Type the following commands to enable all files used by migration. Change the value **SIM** to your three-character system image specified on the Pre-Installation Worksheet in Chapter 2.

```
CEMT SET FILE (SIMUSER) OPE ENA – Partner User  
CEMT SET FILE (SIMPCNV*) OPE ENA – Partner Conversion  
CEMT SET FILE (SIMTCNV) OPE ENA – Data Translation Migration
```

This is an important step in verification. All partner relationship migration files must be available to CICS before you can continue. If a file allocation problem occurs, check your CICS system log and file definitions. You must resolve all problems.

- Type the following command to load all programs and mapsets. Change the value **PIM** to your three-character program image specified on the Pre-Installation Worksheet in Chapter 2.

```
CEMT SET PROGRAM (PIM*) NEW
```

If a program fails to load, most likely an error occurred in the virtual system resources or library concatenation. All online programs and mapsets must be available to CICS before you can continue.

- Review each entry displayed on the screen. When you have finished, press **PF3** and then clear the screen.

Completed by: _____

Date: _____ **Time:** _____

Set Up Separate Partial CICS System Image for Relationship Mode

In Chapter 3 of this guide, you created a CICS image for Release 6.4. This image is configured for either Partner/Qualifier mode or Mixed mode, based on the setting of your system Configuration Record Type 0 (On-line Processing Options).

We recommend that you create another CICS image (a system image of REL is suggested) to allow you to verify the results of the migration of your Partner/Qualifier partners to Relationship partners. Configure this image for Relationship mode. This will allow you to review the files created during the migration, as well as the databank and partner updates that will occur during parallel testing. It is important that you run parallel tests between your Release 6.4 Partner/Qualifier or Mixed mode system and your newly migrated Release 6.4 Relationship mode system.

Step 9 Allocate the files for Relationship mode migration – customize JCL member **CNRELN** and submit.

This job will build the Partner, Inbound Control, Outbound Control, Partner Relationship, and System Configuration files for the Relationship mode migration.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**)
- In Step11 of JCL member **CNRELN**, change the data set name of **INFILE** to match the Configuration file of your base Release 6.4 system (Partner/Qualifier or Mixed mode). This will seed your Release 6.4 Relationship image Configuration file that is created in this job with the settings from your base Release 6.4 system.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ Time: _____

Step 10 Customize JCL member **DEFDB** and submit. This job will build databank files for the Relationship Mode Migration.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change space allocations as needed (see the *Gentran:Basic for zSeries Release 6.4 Technical Reference Guide* for calculation information).
- Change data set names as required by your installation. Consider the following:
 - Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing this enables you to mass-edit data set names.
 - Permanent Gentran:Basic files are identified with **VSAM** as the third node of the data set name.
- To create separate Databank files for your Relationship testing, change the data set name as follows:

```
GENTRAN.V6X4.VSAM.EDI.EDIxxxx to GENTRAN.V6X4.VSAM.REL.EDIxxxx
GENTRAN.V6X4.SEQ.EDI.EDIIEAR to GENTRAN.V6X4.SEQ.REL.EDIIEAR
GENTRAN.V6X4.SEQ.EDI.EDIOEAR to GENTRAN.V6X4.SEQ.REL.EDIOEAR
GENTRAN.V6X4.SEQ.EDI.EDIIAAR to GENTRAN.V6X4.SEQ.REL.EDIIAAR
GENTRAN.V6X4.SEQ.EDI.EDIOAAR to GENTRAN.V6X4.SEQ.REL.EDIOAAR
GENTRAN.V6X4.SEQ.EDI.EDICAAAR to GENTRAN.V6X4.SEQ.REL.EDICAAAR
```
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than 8.

Completed by: _____

Date: _____ **Time:** _____

Step 11 Customize JCL member **CNDTRN** and submit. This job will build code tables for the Relationship Mode Migration.

Note: You must complete this step even if you do not use partner-specific data translation tables in the mapping process.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing this enables you to mass-edit data set names.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**.

Completed by: _____

Date: _____ **Time:** _____

Step 12 Set up a Relationship mode CICS system image.

This system image will be a partial image used to test the results of your migrated partners/qualifier partners to relationship partners. Special partner, databank, code files, and configuration files were created in **Step 9** through **Step 11** in this section.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Follow the steps in the “Establishing the Online Environment” section in Chapter 3 of this guide to set up a separate CICS system image for Relationship mode. You should complete all of the steps in that section.
- To reflect the files created in **Step 9** through **Step 11**, change the data set names in the definitions for the following files:
 - Partner
 - Inbound Control
 - Outbound Control
 - System Configuration
 - All Databank
 - Code Define
 - Code Data
 - Code Valid
 - Code Codes

Note: See Appendix C in this guide for more information.

Completed by: _____

Date: _____ **Time:** _____

Step 13 Customize JCL member **PRFRDOF**. This member contains the CICS resource definitions for the Partner Relationship file that needs to be added to the Relationship mode CICS image that was created in **Step 12** of this section.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Review each definition for your site requirements.
- Globally change the value **SIM** to the three-character system image specified on your Pre-installation Worksheet in Chapter 2.
- Each definition contains the **DSNAME** parameter to specify the names of the data sets to be allocated for the files. You may remove these parameters and instead specify the files using DD statements in the CICS startup JCL.
If you elect to retain the **DSNAME** parameters, you must globally change the data set name high-level qualifier **GENTRAN.V6X4** to the value specified on the Pre-installation Worksheet in Chapter 2.
If you elect to remove the **DSNAME** parameters, JCL member **PRFCICS** contains DD statements that you may use. You must globally change the value **SIM** to the three-character system image specified on the Pre-installation Worksheet in Chapter 2. You must also globally change the data set name high-level qualifier **GENTRAN.V6X4** to the value specified on the Pre-installation Worksheet in Chapter 2.
- If you changed the CICS Group Name on the Pre-installation Worksheet in Chapter 2 from the default value **GENBSC**, globally change the value in the **GROUP** parameter in each definition to the value you are using.
- Review local shared resource Pool IDs for your system. To manage overhead, most Gentran:Basic files are assigned to LSR pools. Files that cannot be installed in a pool use the **LSRPOOLID (NONE)** parameter in the definitions.
- If you are installing into an MRO environment, you will need to uncomment the **KEYLENGTH** and **RECORDSIZE** parameters for each resource definition.
You may also need to uncomment the **REMOTESYSTEM (NAME)** parameter for each resource and change the value **NAME** to the 4-character alphanumeric name of the CICS region where the file resides.
In addition, if you are creating a unique group name for each MRO region, you will need to create a duplicate JCL member for each unique group name.
- Read the comments within the JCL member and follow additional instructions.

Completed by: _____

Date: _____ **Time:** _____

Step 14 Customize JCL member **DEFPRF**. This member contains the job to define the Partner Relationship file resources in the CICS System Definition file.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change data set names **YOUR.CICS.SDFHLOAD** and **YOUR.CICS.DFHCS** as required by your installation.
- Change data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- If you are installing into an MRO environment, you may need to run this job multiple times depending on whether or not you are sharing the CSD file among regions and whether or not you are using different group names in each region. If you do need to run the DEFPRF job multiple times, modify the CSD file name, group name, and/or JCL member name to meet your needs.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 15 Update the System Configuration file for Relationship mode.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Enable all files in the Release 6.4 CICS environment.
- In Gentran, select option **4** from the Gentran Main Menu to display the Administrative Maintenance subsystem.
- From the Administrative Maintenance Menu, select option **3** to display the Configuration Directory.

Note: You can also display the Configuration Directory by typing **4 . 3** in the Jump Code field.

- Type **S** in the A (action) field next to Record Type 0 (On-line Processing Options) and press **PF5** to display the Configuration Maintenance screen. Press **PF5** again to list more options.
- Type **R** (Relationship) in the Trading Profile Mode field and press **PF10** to update the system.

Completed by: _____

Date: _____ **Time:** _____

Identifying Relationships

Trading Partners

In this section, you will identify the users and partners that make up your trading partner relationships using your base Release 6.4 system (Partner/Qualifier or Mixed mode). Then, you will perform steps for maintaining these relationships during migration from Partner/Qualifier mode to Relationship mode.

In previous steps, you installed a set of screens for partner migration in Gentran:Basic. These screens enable you to select, review, and update User ID and Partner ID records that make up trading partner relationships. To access these screens, make sure that you have set up the appropriate security permission to use the Partner Migration subsystem.

See Chapter 5, The Administration Subsystem, in the *Gentran:Basic for zSeries Release 6.4 User's Guide* for information about security setup.

Step 17 Access the Partner Migration Menu (EDIY100).

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Log on to Gentran:Basic.
- From the Gentran Main Menu, type **4 . 5** in the Jump Code field and press **Enter** to display the Partner Migration Menu (EDIY100).

Note: You can also display the Partner Migration Menu from the Administrative Main Menu. Type **5** (Relationship Conversion) in the selection field and press **Enter**.

```
EDIY100 4.5 _____ PARTNER MIGRATION MENU XXX 12/01/2005
                                     12:00:00

Type the number of your selection below and press ENTER, or
press the PF3 key to Exit.

_ 1. User Selection
   2. User Maintenance
   3. Partner Selection
   4. Relationship Maintenance
   5. Data Translation Table Directory
   6. Data Table Migration Selection
   7. Data Table Migration Maintenance

Enter PF1=Help          PF3=Exit
```

Step 18 Identify the users.

The User Selection screen (EDY200) provides a list of records from which you can select Partners IDs that you want to identify for the *user* portion of a trading partner relationship. After you have identified Partner IDs by using the Select function, they will appear highlighted. Partners that are selected will be maintained until the completion of the migration process; therefore, when you are migrating partners in groups, you can return to the selections screen as often as needed.

- From the Partner Migration Menu, type **1** in the selection field and press **Enter** to display the User Selection (EDY200) screen.

Note: You can also display the User Selection screen from the any Gentran:Basic screen by typing **4 . 5 . 1** in the Jump Code field and pressing **Enter**.

```

Select

TO SELECT, TYPE "S" BESIDE THE PARTNER AND PRESS THE  APPROPRIATE KEY
Enter PF1=Help          PF3=Exit          PF5=UMaint
      PF7=Bwd  PF8=Fwd

```

- Review the list of records currently displayed on the screen for Partner IDs that you want identify as users. If none of your Partner IDs are displayed, press **PF8** to display more records. To select the partners that you want to identify as users, proceed with only one of these steps:
 - *Select all partners at once* – Type **S** in the A field next to all of your Partner IDs listed on the current screen and press **Enter**. Press **PF8** for more records and repeat this step until you have selected all of your partners.
 - *Select only one partner at a time* – Type **S** in the A field next to the respective Partner ID and press **Enter**.
- Press **PF5** (UMaint) to display the User Maintenance (EDY500) screen.

Completed by: _____

Date: _____ **Time:** _____

Step 20 Identify the relationships.

The Partner Selection screen (EDIY300) provides a list of Partners IDs and Alternate Partner IDs that can be selected for the specified user. For Alternate Partner IDs, Gentran:Basic assigns a default value using the first 15 characters of the Partner ID. This screen enables you to select *partners* that correspond with the User ID displayed at the top of the screen and update the Alternate Partner IDs, as required for your organization. After you have identified Partner IDs by using the Select function, they will appear highlighted.

```

Select Update

```

- From the list of records on the screen, select the Partner IDs by typing **S** in the A field next to the Partner IDs that correspond with the User ID displayed at the top of the screen. Then, press **Enter**. If none of your Partner IDs are displayed, press **PF8** to display more records. Repeat this step until you have selected all of your partners.
- Review the assigned Alternate Partner ID. If the Alternate Partner ID does not provide appropriate uniqueness for your organization or if you choose to use a more friendly name, change the default value. To change the default value, type a new Alternate Partner ID in the Alternate Partner ID field. Then, type **U** in the A field next to the Partner ID and press **Enter**.
- Press **PF5** (RMaint) to display the Relationship Maintenance screen (EDIY400).

Completed by: _____

Date: _____ Time: _____

Step 21 Review the relationships.

The Relationship Maintenance screen (EDIY400) provides a list of relationships that you have identified. From this screen, you can confirm correct selection of relationships and delete or reset any relationships that are incorrectly set up. If you are migrating partners in groups and have previously migrated partners, these relationships will appear highlighted.

```

Delete Reset
EDIY400 4.5.4_____      RELATIONSHIP MAINTENANCE      XXX      12/01/2005
                                                                    12:00:00

Starting User ID...: AAA_WAREHOUSE_CO_11_____      Qual: 01__

Enter PF1=Help      PF3=Exit PF4=Part
      PF7=Bwd  PF8=Fwd
    
```

- Review the relationships to confirm correct selection. If necessary, perform the following:
 - For relationships that are incorrectly defined, type **D** in the A (action) field and press **Enter**.
 - For relationships that need to be re-converted, type **R** in the A (action) field and press **Enter**.

Completed by: _____

Date: _____ **Time:** _____

Partner-Specific Data Translation Tables

You only need to perform **Step 22** through **Step 25** if you use partner-specific Data Translation tables in the mapping process. If you do not use partner-specific Data Translation tables, continue to “Migrating the Partner File” on page 7-41.

In this section, you will review all of your partner-specific Data Translation tables and identify the appropriate user/partner relationship to use in Relationship mode in place of the Partner/Qualifier used for each table.

You cannot complete this section until you have identified your trading partner relationships (**Step 20**). If you are migrating your partners to Relationship mode in groups, you will also migrate your partner-specific Data Translation table to Relationship mode in groups. If you are migrating all your partners to Relationship mode at one time, you will also migrate all of your Data Translation tables to Relationship mode at one time.

Step 22 Access the Partner Migration Menu.

Typically performed by: System Installer or CICS Administrator

Check the box next to each task as you complete it.

- Log on to Gentran:Basic.
- From the Gentran Main Menu, type **4 . 5** in the Jump Code field and press **Enter** to display the Partner Migration Menu (EDIY100).

Note: You can also display the Partner Migration Menu from the Administrative Main Menu. Type **5** (Relationship Conversion) in the selection field and press **Enter**.

```

EDIY100 4.5_____ PARTNER MIGRATION MENU          XXX  12/01/2005

```

Completed by: _____

Date: _____ **Time:** _____

Step 23 Review the Partner-Specific Data Translation tables.

The Data Translation Table Directory lists all partner-specific Data Translation tables defined in your system. The Partner/Qualifier used for each table also displays. After you have selected the user/partner relationships to use for a Data Translation table, these relationships will appear highlighted. Data Translation tables that have been selected for migration will be maintained on the screen until the completion of the migration process. Therefore, users migrating partners and Data Translation tables in group can return to their selection as often as needed.

- From the Partner Migration Menu, type **5** in the selection field and press **Enter** to display the Data Translation Table Directory (EDIY600).

Note: You can also display the Data Translation Table Directory from the any Gentran:Basic screen by typing **4 . 5 . 5** in the Jump Code field and pressing **Enter**.

```

Select

TO SELECT TABLE ENTER AN "S" BESIDE THE ID
Enter PF1=Help          PF3=Exit          PF5=DTSel
      PF7=Bwd   PF8=Fwd
    
```

- Review the list of records currently displayed on the screen for Data Translation tables that are linked to the partners you are migrating to Relationship mode. If none of your Tables IDs are displayed, press **PF8** to display more records. To select the Table ID that you want to migrate to Relationship mode, type **S** in the A field next to respective the Table ID.
- Press **PF5** (DTSel) to display the Data Table Migration Selection (EDIY610) screen.

Completed by: _____

Date: _____ **Time:** _____

Step 24 Select the User/Partner for the Data Translation table for migration.

The Data Table Migration Selection screen displays the selected partner-specific Data Translation table along with its designated Partner ID and Qualifier. This screen enables you to choose the user/partner relationship to tie to this table in place of the current Partner ID and Qualifier.

```

Enter PF1=Help          PF3=Exit PF4=DTDir      PF5=DTMaint  PF6=Next
                        PF9=Add
    
```

- Type your User ID in the New User ID field. Then, type the Partner ID in the New Partner ID field.

Note: The values entered in these fields must be valid values as found in the Relationship User/Partner fields on the Relationship Maintenance screen (EDIY400) from **Step 21**.

- Press **PF9** (Add) to add the record to the Data Table Migration file, which is used as an input file to the batch Data Translation Migration program.
- Continue typing the values for all user/partner relationships for each table that you want to migrate. Then, press **PF5** (DTMaint) to display the Data Table Migration Maintenance screen (EDIY620).

Completed by: _____

Date: _____ **Time:** _____

Step 25 Review the Data Translation tables selected for migration.

The Data Table Migration Maintenance screen displays a list of partner-specific Data Translation tables that have been identified for migration to Relationship mode. From this screen, you can confirm correct selection of user/partner relationships to use for each table and delete or reset any relationship incorrectly set up. If you are migrating partners and tables in the groups and have previously migrated tables, these tables will appear highlighted.

```

Migrating the Partner File

The Partner Migration Program

The actual migration from Partner/Qualifier to Relationship takes place during a batch job. This job executes the Partner Migration (EDIH100) program, which reads the Partner Conversion file and combines the records from the Release 6.4 partner profile in Partner/Qualifier mode to create the Release 6.4 partner profile in Relationship mode. The inbound and outbound Control files are migrated at the same time. The global partner !!!GENTRAN-RESERVED-PARTNER-ID-1 is also migrated to Relationship mode during this process. The new Partner ID will be !!!GENTRAN-RU1/!!!GENTRAN-RP1.

Migrating Release 6.4 Partner Profiles		
Input		
EDICFG	6.4 System Configuration File	VSAM
PARTIN	6.4 Partner File – Partner/Qualifier	VSAM
ICNTLIN	6.4 Inbound Control File – Partner/Qualifier	VSAM
OCNTLIN	6.4 Outbound Control File – Partner/Qualifier	VSAM
XREFIN	6.4 Partner X-Ref File	VSAM
PARTCNV	6.4 Partner Conversion File	VSAM
Output		
PARTOUT	6.4 Partner File – Relationship	VSAM
ICNTL	6.4 Inbound Control File – Relationship	VSAM
OCNTL	6.4 Outbound Control File – Relationship	VSAM
PARTREL	6.4 Partner Relationship File	VSAM
EDISUM	Summary Report	

The new Relationship partners are built by combining the two partners' records as follows:

Partner Record	Record ID	User/Partner Source
Header	AH	Partner
Interchange	CONTROL	Partner
Group	GP	Partner
Transaction	TC	Partner
Name and Address	NAMEADUSER	User
Name and Address	NAMEADPART	Partner
User	USER	Partner
If not using the Sender ID for Data Separation		
Data Separation	PI, GI, TI	User
Data Separation	PO, GO, TO	Partner

Partner Record	Record ID	User/Partner Source
If using the Sender ID for Data Separation		
Data Separation	PI, PO, GI, GO, TI, TO	Partner
Error Rejection	EP, EG, ET	User

Partner Migration Program Parameter Record

Parameter Record

Col 1 – 11: CONVERT ALL This parameter instructs the program to process all records on the Partner Conversion. **Do not use this parameter if you choose to migrate your trading partners in groups.**

Migration Process

In this section, you will perform the migration process from Partner/Qualifier mode to Relationship mode for the Partner file, Inbound and Outbound Control files, and Cross-reference files. After you have performed the partner migration process, you will:

- Migrate your translation tables.
- Verify correct processing.
- Remove components that are no longer needed.

Individual instructions for migrating all of your trading partners and migrating trading partners in groups are included in this section.

Step 26 Prepare for the migration.

Typically performed by: System Installer

Check the box next to the task as you complete it.

- Before running the migration process, close and disable files where **SIM** represents your three-character system image ID in your current Release 6.4 CICS environment. These files include:
 - **SIMPCNV** • **SIMPCNV1** • **SIMPART** • **SIMPREF**
 - **SIMPREF1** • **SIMPINB** • **SIMPOTB**
- For Relationship mode, you must also close and disable the files where **SIM** represents your three-character system image ID in your Relationship Release 6.4 CICS environment. These files include:
 - **SIMPART** • **SIMPREL** • **SIMPREL1**
 - **SIMPOTB** • **SIMPINB**
- Proceed with one of these steps:
 - If you are migrating all of your Release 6.4 trading partners at one time to Relationship mode, go to **Step 27**, “Migrate the entire Partner subsystem.”
 - If you are migrating your Release 6.4 trading partners in groups to Relationship mode, go to **Step 28**, “Migrate the Partner subsystem in groups.”

Completed by: _____

Date: _____ **Time:** _____

Step 27 Migrate the entire Partner subsystem – customize JCL member **CNREL** and submit.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text strings **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing this enables you to mass-edit data set names.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**. A return code of 8 usually indicates that during a step, Gentran attempted to delete a file that does not exist. The file will be created during the job.

Continue to **Step 29**, in Migrating Translation Tables.

Completed by: _____

Date: _____ **Time:** _____

Step 28 Migrate the Partner subsystem in groups – customize JCL member **CNRELI** and submit.

Note: If you have already submitted CNREL, skip this section.

You can run CNRELI multiple times when migrating your partner profiles in groups from Partner/Qualifier mode to Relationship mode. When a Partner Conversion record (PARTCNV) is processed, a flag is set on this file and the records will not be processed during subsequent runs. To re-migrate your relationships, use CNREL (see **Step 27**).

Individual relationships can be re-migrated by using the Reset action on the Relationship Maintenance (EDIY400) screen. The relationship will then be migrated the next time you execute CNRELI.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing this enables you to mass-edit data set names.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**. A return code of 8 usually indicates that during a step, Gentran attempted to delete a file that does not exist. The file will be created during the job.

Continue to **Step 29** in Migrating Translation Tables.

Completed by: _____

Date: _____ **Time:** _____

Migrating Translation Tables

The Data Translation Program

The actual migration of partner-specific Data Translation tables from Partner/Qualifier mode to Relationship mode takes place during a batch job. This job executes the Data Translation Migration (EDIH200) program. The program reads the Data Translation Migration file to replace the Partner/Qualifier found on the partner-specific Data Translation tables with the user/partner specified in the online partner migration process. Both the Table Definition (Code Define) and Data Translation Table (Code.Data) files are migrated to Relationship mode during this process.

Migrating Release 6.4 Data Translation Tables		
Input		
INDEF	6.4 Code Define File	VSAM
INDATA	6.4 Code Data File	VSAM
DTBMIG	6.4 Data Translation Migration File	VSAM
Output		
OUTDEF	6.4 Code Define File – Relationship	VSAM
OUTDATA	6.4 Code Data File – Relationship	VSAM
EDISUM	Summary Report	

The EDIH200 program sequentially reads the Data Translation Migration file and processes only those records on the file that have not been migrated in previous runs. You can determine if a table has already been migrated by reviewing the online Data Translation Table Directory (EDIY600) or Data Table Migration Maintenance (EDIY620) screens. Tables that have been migrated will appear highlighted on these screens. The CONVERT ALL parameter must be used if you want to migrate all the tables found in the Data Translation Migration file.

Data Translation Table Migration Program Parameter Record

Parameter Record

Col 1 – 11: CONVERT ALL This parameter instructs the program to process all records on the Data Translation Migration file. **Do not use this parameter if you choose to migrate your trading partners and tables in groups.**

Migration Process

In this section, you will perform the migration process for Mapping Translation Tables from Mixed mode to Relationship mode. If you do not use partner-specific Data Translation tables, you do not need to perform this process and can continue to **Step 32**. After you have perform the migration process, you will verify correct processing and remove components that are no longer need. Individual instructions for migrating all of your Mapping Translation tables and migrating Mapping Translation tables in groups are included in this section.

Step 29 Prepare for the migration.

Typically performed by: System Installer

Check the box next to the task as you complete it.

Before running the migration process, close and disable these files in your current Release 6.4 CICS environment, where **SIM** represents your three-character system image:

- **SIMTCNV** • **SIMCDCD** • **SIMCDC1** **SIMCDDA**
- **SIMCDDF** • **SIMCDD1** • **SIMCDVL**

For Relationship mode, you must also close and disable the files where **SIM** represents your three-character system image in your Relationship Release 6.4 CICS environment. These files include:

- **SIMCDDF** • **SIMCDCD** • **SIMCDC1**
- **SIMCDDA** • **SIMCDD1** • **SIMCDVL**

If you are migrating all translation tables, continue with **Step 30**. If you are migrating the translation tables in groups, continue with **Step 31**.

Completed by: _____

Date: _____ **Time:** _____

Step 30 Migrate all translation tables – customize JCL member **CNDTR** and submit.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change the text strings **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing this enables you to mass-edit data set names.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**. A return code of 8 usually indicates that during a step, Gentran attempted to delete a file that does not exist. The file will be created during the job.

Continue with **Step 32**.

Completed by: _____

Date: _____ **Time:** _____

Step 31 Migrate the tables in groups – customize JCL member **CNDTRI** and submit.

Note: If you have already submitted CNDTR, skip this section.

You can run CNDTRI multiple times when migrating your translation tables in groups from Partner/Qualifier mode to Relationship mode. When a Data Translation Migration record (DTBMIG) is processed, a flag is set on this file and the record is not processed during subsequent runs. To re-migrate your tables, use CNDTR (see **Step 30**).

- Add a job card.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**). Doing this enables you to mass-edit data set names.
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify the job results. You should never receive a return code greater than **8**. A return code of 8 usually indicates that during a step, Gentran attempted to delete a file that does not exist. The file will be created during the job.

Continue with **Step 32**.

Completed by: _____

Date: _____ **Time:** _____

Step 32 Compare Relationship mode against Mixed mode.

Typically performed by: System Installer

Check the box next to each task as you complete it.

Set up JCL to run the Release 6.4 Relationship mode. These members require JCL changes:

- EXEC001 • EXEC011M • INBOUND
- EXEC002B • EXEC017 • OUTBOUND
- EXEC005 • EXEC019
- EXEC006 • EXEC042
- EXEC011A • EXEC087

For each member listed above, make the following JCL changes:

- Delete all DD statements referencing **GENTRAN.V6X4.VSAM.PARTNER.XREF** and **GENTRAN.V6X4.VSAM.PARTNER.XREF.PATH**.
- Uncomment DD statements referencing **GENTRAN.V6X4.VSAM.PARTREL** and **GENTRAN.V6X4.VSAM.PARTREL.PATH**.
- To reflect the **.REL** files created **Step 9** through **Step 11**, change the data set names in the JCL entries for the following:

DD Name	Old Data Set Name	New Data Set Name
SYS090	GENTRAN.V6X4.VSAM.PARTNER	GENTRAN.V6X4.VSAM.REL.PARTNER
SYS091	GENTRAN.V6X4.VSAM.CONTROL.OUTBOUND	GENTRAN.V6X4.VSAM.REL.CNTL.OUTBOUND
SYS092	GENTRAN.V6X4.VSAM.CONTROL.INBOUND	GENTRAN.V6X4.VSAM.REL.CNTL.INBOUND
EDICFG	GENTRAN.V6X4.VSAM.EDI.EDICFG	GENTRAN.V6X4.VSAM.REL.EDICFG
EDIIEA	GENTRAN.V6X4.VSAM.EDI.EDIIEA	GENTRAN.V6X4.VSAM.REL.EDIIEA
EDIIES	GENTRAN.V6X4.VSAM.EDI.EDIIES	GENTRAN.V6X4.VSAM.REL.EDIIES
EDIQ097	GENTRAN.V6X4.VSAM.EDI.EDIQ097	GENTRAN.V6X4.VSAM.REL.EDIQ097
EDIIECA	GENTRAN.V6X4.VSAM.EDI.EDIIECA	GENTRAN.V6X4.VSAM.REL.EDIIECA
EDIOEA	GENTRAN.V6X4.VSAM.EDI.EDIOEA	GENTRAN.V6X4.VSAM.REL.EDIOEA
EDIOES	GENTRAN.V6X4.VSAM.EDI.EDIOES	GENTRAN.V6X4.VSAM.REL.EDIOES
EDIOAL	GENTRAN.V6X4.VSAM.EDI.EDIOAL	GENTRAN.V6X4.VSAM.REL.EDIOAL
EDIIAA	GENTRAN.V6X4.VSAM.EDI.EDIIAA	GENTRAN.V6X4.VSAM.REL.EDIIAA
EDIIAS	GENTRAN.V6X4.VSAM.EDI.EDIIAS	GENTRAN.V6X4.VSAM.REL.EDIIAS
EDIIEL	GENTRAN.V6X4.VSAM.EDI.EDIIEL	GENTRAN.V6X4.VSAM.REL.EDIIEL
EDIOAA	GENTRAN.V6X4.VSAM.EDI.EDIOAA	GENTRAN.V6X4.VSAM.REL.EDIOAA
EDIOAS	GENTRAN.V6X4.VSAM.EDI.EDIOAS	GENTRAN.V6X4.VSAM.REL.EDIOAS
EDIQ093	GENTRAN.V6X4.VSAM.EDI.EDIQ093	GENTRAN.V6X4.VSAM.REL.EDIQ093
EDIOACA	GENTRAN.V6X4.VSAM.EDI.EDIOACA	GENTRAN.V6X4.VSAM.REL.EDIOACA

- Run your production outbound flow in the 6.4 Mixed Mode
- Run the same flow in the Release 6.4 Relationship mode.
- Compare the results of both runs. The results should be the same.
- If the results are not the same, identify the source of the difference. Consider the following:
 - Your Configuration record must be set to Relationship mode.
 - Maps and parameters must be set up the same.
 - For any JCL overrides, they must be the same in both runs.

Note: If you are still unable to identify the source of the difference, contact the Gentran Software Support Center for further assistance.

- Run your production inbound flow in the Release 6.4 Mixed mode.
- Run the same flow in the Release 6.4 Relationship mode.
- Compare the results of both runs. The results should be the same.
- If the results are not the same, identify the source of the difference. Consider the following:
 - Your Configuration record must be set to Relationship mode.
 - Maps and parameters must be set up the same.
 - For any JCL overrides, they must be the same in both runs.

Note: If you are still unable to identify the source of the difference, contact the Gentran Software Support Center for further assistance.

Completed by: _____

Date: _____ **Time:** _____

Performing Gentran:Basic Maintenance

After you have completed the migration process and you are satisfied that Relationship mode processing is functioning correctly, you should remove the migration programs and delete the migration files from your CICS region.

Note: If you have used a separate CICS system image for Relationship mode, you should consolidate both images.

In this section, you will find instructions to remove programs and back up and delete the Release 6.4 Partner, Inbound Control, Outbound Control, and Partner Cross-reference files for Partner/Qualifier mode. Instructions for renaming the Partner, Inbound Control, and Outbound Control files for Relationship mode to the standard Gentran names used for processing are also included in this section.

Step 33 Remove the Conversion file and programs.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Log on to CICS as required within your environment to access the CEDA transaction. When you have finished, clear the screen.
- Type the following command to remove the group that contains the Partner Relationship Migration resources from the list of groups that CICS installs at startup. Substitute your list name for the value **LISTNAME** in the command. Press **Enter** to invoke the command.

```
CEDA REMOVE GROUP (GENCVBSC) LIST (LISTNAME)
```

Check for the **Remove Successful** result from CEDA. When you have finished, press **PF3**. Then, clear the screen.

- Type the following command to delete the group that contains the Partner Relationship Migration resources. Press **Enter** to invoke the command.

```
CEDA DELETE GROUP (GENCVBSC) ALL
```

Check for the **Delete Successful** result from CEDA. When you have finished, press **PF3**. Then, clear the screen.

- Using the IDCAMS utility, delete intermediate VSAM files. You may want to archive a copy before physically removing them from your system.

Partner Conversion File	GENTRAN.V6X4.VSAM.EDI.PARTCNV
Partner User File	GENTRAN.V6X4.VSAM.EDI.USER
Data Translation Migration File	GENTRAN.V6X4.VSAM.EDI.DTBMIG

Completed by: _____

Date: _____ **Time:** _____

Step 34 Delete the Partner/Qualifier files – customize JCL member **DELPQ** and submit.

Note: During the migration process, a different data set name was used for these files to distinguish them from the Partner/Qualifier files.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change **DISK** of **UNIT=DISK** as required by your installation.
- Change text string **XXXXXX** of **VOLUMES ()** as required by your installation.
- Change data set names as required by your installation. Change only the first two index levels of each data set name (**GENTRAN.V6X4**).
- Read the comments within the JCL member and follow additional instructions.
- Submit the JCL member.
- Verify job results. You should never receive a return code greater than **8**.
- Log on to CICS as required within your environment to access the CEDA transaction. When you have finished, clear the screen.
- Type the following commands to delete the resources for the Cross-reference file, substituting your three-character system image for **SIM** and substituting your group name for **GENBSC** (if you changed it from **GENBSC**).

CEDA DELETE FILE (SIMPREF) GROUP (GENBSC)

CEDA DELETE FILE (SIMPREF1) GROUP (GENBSC)

Check for the **Delete Successful** result from CEDA. When you have finished, press **PF3** and then clear the screen.

If you specified these files to your CICS using DD statements in the CICS startup JCL, the DD statements must also be removed.

- These members require JCL changes:
 - EXEC001 • EXEC011M • INBOUND
 - EXEC002B • EXEC017 • OUTBOUND
 - EXEC005 • EXEC019
 - EXEC006 • EXEC042
 - EXEC011A • EXEC087

For each member listed above, make the following JCL changes:

- Delete all DD statements referencing
GENTRAN.V6X4.VSAM.PARTNER.XREF and
GENTRAN.V6X4.VSAM.PARTNER.XREF.PATH.
- Uncomment DD statements referencing
GENTRAN.V6X4.VSAM.PARTREL and
GENTRAN.V6X4.VSAM.PARTREL.PATH.

Implementing Gentran:Basic

Overview

This chapter explains the final tasks to be completed to implement Gentran:Basic.

This chapter contains the following topics:

Topic	Page
Deleting Installation Files	8-2
System Configuration	8-3
Concurrent Processing	8-8
Introduction.....	8-8
How Concurrent Processing Is Implemented.....	8-8
The Benefits of Concurrent Processing	8-9
Requirements	8-9
Choosing to Implement Concurrent Processing.....	8-10
Implementing Concurrent Processing.....	8-11
Backing Out Concurrent Processing.....	8-21

Deleting Installation Files

Following the successful installation of Gentran:Basic, the files that you uploaded to your mainframe and the files that you used to build the permanent Gentran:Basic files are no longer needed. This section deletes those files and frees the disk space that they occupy.

Note: Leaving the files on your mainframe will not hinder the performance of Gentran:Basic. If you do not want to delete them, you may skip this section and continue to "System Configuration".

Step 1 Customize JCL member **DELFILES** and submit.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change the data set names as required by your installation.
 - Change only the first index level of the sequential standards data sets. These are identified with the **GENTRAN . STDS** high-level qualifier.
 - Change only the first two index levels of all other data sets. These are identified with the **GENTRAN . V6X4** high-level qualifier.
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

System Configuration

You will use the Configuration Maintenance subsystem to complete the tasks in this section to configure your system.

To perform this process, you must refer to your Pre-installation Worksheet (Chapter 2). You will use information that you have specified on the Pre-installation Worksheet to update the Configuration Maintenance subsystem in Gentran:Basic.

Step 2 Implement Gentran:Basic.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Log on to Gentran:Basic.
- From the Gentran Main Menu, type **4** in the selection field and press **Enter** to display the Administrative Main Menu (EDIM210).

```
EDIM210 4.0 _____ ADMINISTRATIVE MAIN MENU XXX 12/01/2005

Concurrent Processing

Introduction

Gentran:Basic has traditionally had two restrictions that have limited the ability to run Inbound and Outbound job streams concurrently.

- Databanks – The four databanks (Outbound Application, Outbound EDI, Inbound EDI, and Inbound Application) are defined with a VSAM shareoption of 2,3. This allows only one application at a time to update each databank.
- Inbound and Outbound Partner Control files – These are defined with a VSAM shareoption of 4,3. This allows multiple applications to update a file concurrently but requires each application to serialize access to ensure the integrity of the file. However, using a shareoption of 4,3 adds processing overhead because VSAM always refreshes its buffers whenever the files are accessed. Concurrent processing has been always permitted if the databank facility is not enabled but at the cost of additional processing overhead.

This section describes the concept of concurrent processing and helps you decide whether or not to modify your installation of Gentran:Basic to use concurrent processing to improve processing throughput.

How Concurrent Processing Is Implemented

Concurrent processing is implemented in Gentran:Basic using the External CICS Interface (EXCI) feature of CICS. This is an application programming interface that enables a non-CICS batch "client" program to call a CICS "server" program. These "client" programs then allocate and open a pipe to pass data to and receive data from the CICS "server" programs.

In Gentran:Basic, the following are the "client" programs that update the Databank and/or Partner Control files:

- | | |
|------------|--|
| • EBDI001 | Inbound Editor |
| • EBDI002 | Outbound Editor |
| • EBDI011A | Outbound Envelope Generator for Acknowledgements |
| • EBDI011M | Outbound Envelope Generator for Mapping |
| • EBDI041 | Inbound Mapper |
| • EBDI042 | Outbound Mapper |
| • EDID101 | Outbound Application Databank Maintenance |
| • EDID201 | Outbound EDI Databank Maintenance |
| • EDID205 | Outbound EDI Databank Extract |
| • EDID301 | Inbound EDI Databank Maintenance |
| • EDID401 | Inbound Application Databank Maintenance |
| • EDID405 | Inbound Application Databank Extract |
| • EDID510 | Acknowledgement Reconciliation/Monitor |
| • EDID550 | EDI Databank Inquiry |
| • EDID551 | Application Databank Inquiry |
| • EDID850 | Network Reconciliation |

All updating of the Databank and Partner Control files has been removed from these "client" programs and has been moved into the following CICS "server" programs:

- EDIBCTL Inbound and Outbound Control file EXCI Server
- EDIBDBIA Inbound Application Databank EXCI Server
- EDIBDBIE Inbound EDI Databank EXCI Server
- EDIBDBOA Outbound Application Databank EXCI Server
- EDIBDBOE Outbound EDI Databank EXCI Server

Some Databank utility programs have not been enabled for concurrent processing. The following batch programs still update the databanks, so they can be run only when the batch and on-line CICS systems are not active:

- EDID502 Change Audit Maintenance
- EDID860 Network Reconciliation Maintenance
- EDIG300 EDI Databank Orphan Record Cleanup

The Benefits of Concurrent Processing

Because the databank files are now owned by CICS, they can be updated concurrently by multiple batch applications. This improves processing throughput and eliminates the need to refresh the databanks with the PF6 function key on the Databank Maintenance Menu screen (EDIM250).

On-line CICS applications are also able to update the databank files concurrently with batch applications. This eliminates the need for the pending files that were used to apply updates via batch applications.

Because the inbound and outbound partner control files are now owned and updated by CICS, the shareoptions on the files can be changed from 4,3 to 2,3. This eliminates the processing overhead associated with using the 4,3 shareoption.

Requirements

The CICS region that owns the Databank files must be available whenever batch processing occurs. If the CICS region is not available, all batch processing will fail with an error message.

The JCL streams that you use for your Inbound and Outbound batch processing must be able to run concurrently. This means that job names must be unique, data set names for non-shared sequential data sets must be unique, and shared VSAM data sets must be specified as shared.

Executing the Databank utility programs that have not been enabled for concurrent processing requires that they be given exclusive control of the Databank files. Therefore, all Inbound and Outbound batch processing must be stopped and the CICS region that owns the Databank files must either be shut down or have the Databank files closed and disabled.

Choosing to Implement Concurrent Processing

You may want to use concurrent processing if your CICS region is always available when you run batch applications that update the databanks and/or control files and if you wish to improve processing throughput. Even if you have not implemented the databank facility in your Gentran:Basic system, concurrent processing can be enabled for the partner control files.

Concurrent processing is a configurable feature. To configure your system to use concurrent processing, continue with "Implementing Concurrent Processing". If you do not want to use concurrent processing, the installation of your Gentran:Basic system is complete.

Implementing Concurrent Processing

These steps take you through the tasks required to implement concurrent processing.

Step 1 Update batch JCL.

Typically performed by: System Installer

Check the box next to each task as you complete it.

EXCI "client" programs require External CICS Interface modules to execute properly. These modules are located in a PDS library that is supplied with CICS. Add a STEPLIB DD statement for the SDFHEXCI load library to the JCL that is used to execute each of the following applications that have been enabled to perform concurrent processing. Check with your system administrator for the exact name of this PDS in your operating environment.

- | | | |
|--------------------------|----------|--|
| <input type="checkbox"/> | EBDI001 | Inbound Editor |
| <input type="checkbox"/> | EBDI002 | Outbound Editor |
| <input type="checkbox"/> | EBDI011A | Outbound Envelope Generator for Acknowledgements |
| <input type="checkbox"/> | EBDI011M | Outbound Envelope Generator for Mapping |
| <input type="checkbox"/> | EBDI041 | Inbound Mapper |
| <input type="checkbox"/> | EBDI042 | Outbound Mapper |
| <input type="checkbox"/> | EDID101 | Outbound Application Databank Maintenance |
| <input type="checkbox"/> | EDID201 | Outbound EDI Databank Maintenance |
| <input type="checkbox"/> | EDID205 | Outbound EDI Databank Extract |
| <input type="checkbox"/> | EDID301 | Inbound EDI Databank Maintenance |
| <input type="checkbox"/> | EDID401 | Inbound Application Databank Maintenance |
| <input type="checkbox"/> | EDID405 | Inbound Application Databank Extract |
| <input type="checkbox"/> | EDID510 | Acknowledgement Reconciliation/Monitor |
| <input type="checkbox"/> | EDID550 | EDI Databank Inquiry |
| <input type="checkbox"/> | EDID551 | Application Databank Inquiry |
| <input type="checkbox"/> | EDID850 | Network Reconciliation |

Because CICS now owns and updates the Databank, Inbound Partner Control, and Outbound Partner Control files, we recommend that the DD statements for the following files either be commented out or removed from the JCL for each of the specified applications. If you choose to retain them, we recommend that you review the disposition specified for each DD statement to ensure that SHR is specified. A disposition of OLD prevents concurrent processing.

- Remove the SYS092, EDIIEA, EDIIES, and EDIIECA DD statements from JCL that executes the Inbound Editor EBDI001.
- Remove the EDIOEA, EDIOES, EDIOAL, and EDINRC DD statements from JCL that executes the Outbound Editor EBDI002.
- Remove the EDIIAA, EDIIAS, and EDIIEL DD statements from JCL that executes the Inbound Mapper EBDI041.

- Remove the EDIOAA, EDIOAS, and EDIOACA DD statements from JCL that executes the Outbound Mapper EBDI042.
- Remove the EDIOECA, EDINRC, and EDIQ091 DD statements from JCL that executes the Outbound EDI Databank Extract EDID205.
- Remove the EDIIACA and EDIQ095 DD statements from JCL that executes the Inbound Application Databank Extract EDID405.
- Remove the EDINRC DD statements from JCL that executes the Network Reconciliation EDID850.

Some batch applications that have been enabled for concurrent processing continue to access the Databank or Outbound Partner Control files directly. Therefore, the DD statements for these files must not be removed from the JCL for each of the following applications:

- | | | |
|--------------------------|----------|--|
| <input type="checkbox"/> | EBDI011A | Outbound Envelope Generator for Acknowledgements |
| <input type="checkbox"/> | EBDI011M | Outbound Envelope Generator for Mapping |
| <input type="checkbox"/> | EDID101 | Outbound Application Databank Maintenance |
| <input type="checkbox"/> | EDID201 | Outbound EDI Databank Maintenance |
| <input type="checkbox"/> | EDID301 | Inbound EDI Databank Maintenance |
| <input type="checkbox"/> | EDID401 | Inbound Application Databank Maintenance |
| <input type="checkbox"/> | EDID510 | Acknowledgement Reconciliation/Monitor |
| <input type="checkbox"/> | EDID550 | Application Databank Inquiry |
| <input type="checkbox"/> | EDID551 | Network Reconciliation |

The Databank Maintenance applications require the addition of a new run-time parameter of CONCURRENCY-ENABLED with a value of YES. Most of the applications that have been enabled for concurrent processing determine whether or not to perform concurrent processing by accessing the configuration file setting. However, the Databank Maintenance applications use this new parameter instead. The benefit that this provides is that it can be specified as NO to permit Databank Maintenance to be performed on concurrent Databank files when the on-line CICS system is not available. Update the JCL streams that execute each of the following Databank Maintenance applications to include this new parameter:

- | | | |
|--------------------------|---------|---|
| <input type="checkbox"/> | EDID101 | Outbound Application Databank Maintenance |
| <input type="checkbox"/> | EDID201 | Outbound EDI Databank Maintenance |
| <input type="checkbox"/> | EDID301 | Inbound EDI Databank Maintenance |
| <input type="checkbox"/> | EDID401 | Inbound Application Databank Maintenance |

You must also review the JCL streams that execute each of the following applications to ensure that they are able to run concurrently. This primarily focuses on checking data set names of non-shared sequential data sets to ensure that they are unique for each execution.

- | | | |
|--------------------------|----------|--|
| <input type="checkbox"/> | EBDI001 | Inbound Editor |
| <input type="checkbox"/> | EBDI002 | Outbound Editor |
| <input type="checkbox"/> | EBDI011A | Outbound Envelope Generator for Acknowledgements |

- EBDI011M Outbound Envelope Generator for Mapping
- EBDI041 Inbound Mapper
- EBDI042 Outbound Mapper
- EDID205 Outbound EDI Databank Extract
- EDID405 Inbound Application Databank Extract
- EDID550 EDI Databank Inquiry

Completed by: _____

Date: _____ Time: _____

Step 2 Change the Shareoptions on the Inbound and Outbound Partner Control files.

In this step, you will customize JCL member **IMPCCP01**. This job will alter the shareoptions on the two files from 4,3 to 2,3.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 3 Update the CICS online environment.

In this step, you will customize JCL member **IMPCCP02**. This job executes the CICS batch utility DFHCSDUP to update the CICS System Definition (CSD) file. It performs the following updates:

- Defines a CONNECTION with the EXCI protocol.
- Defines SESSIONS with the EXCI protocol.
- Defines the new EXCI "server" programs:
 - EDIBCTL Inbound and Outbound Control file EXCI Server
 - EDIBDBIA Inbound Application Databank EXCI Server
 - EDIBDBIE Inbound EDI Databank EXCI Server
 - EDIBDBOA Outbound Application Databank EXCI Server
 - EDIBDBOE Outbound EDI Databank EXCI Server
- Defines the following file. This is an existing file that is now owned and updated by CICS:
 - EDINRC Network Reconciliation
- Deletes the following transaction. Because the databanks are now owned and updated by CICS, this transaction is no longer needed:
 - EDID Databank Scanner
- Deletes the following programs associated with the databank scanner. Because the databanks are now owned and updated by CICS, this transaction is no longer needed:
 - EDIX290 Databank Monitor
 - EDIX291 Databank Manager for Inbound EDI Databank
 - EDIX292 Databank Manager for Outbound EDI Databank
 - EDIX293 Databank Manager for Inbound Application Databank
 - EDIX294 Databank Manager for Outbound Application Databank
- Deletes the following files associated with the databank scanner. Because the databanks are now owned and updated by CICS, these files are no longer needed:
 - EDIAP Inbound Application Databank Pending
 - EDIQ095 Inbound Application Databank Transaction Queue
 - EDIIEP Inbound EDI Databank Pending
 - EDIOAP Outbound Application Databank Pending
 - EDIOEP Outbound EDI Databank Pending
 - EDIQ091 Outbound EDI Databank Transaction Queue

- Alters the following files to change the LSRPOOLID parameter from (NONE) to (1). Because the shareoptions of these files are being changed from 4,3 to 2,3, they can now be allocated in an LSRPOOL to improve performance.
 - EDIPINB Inbound Partner Control
 - EDIPOTB Outbound Partner Control

- Alters the following files to change the LSRPOOLID parameter from (NONE) to (1) and to change the ADD, DELETE, and UPDATE parameters from (NO) to (YES). Because these files are now owned by CICS, they can be allocated in an LSRPOOL to improve performance and they need full access authorization so they can be updated by CICS:
 - EDIAA Inbound Application Databank Directory
 - EDIAS Inbound Application Databank Message Store
 - EDIACA Inbound Application Databank Change Audit
 - EDIIEA Inbound EDI Databank Directory
 - EDIIES Inbound EDI Databank Message Store
 - EDIIECA Inbound EDI Databank Change Audit
 - EDIIEL Inbound EDI Databank Link
 - EDIOAA Outbound Application Databank Directory
 - EDIOAS Outbound Application Databank Message Store
 - EDIOACA Outbound Application Databank Change Audit
 - EDIOAL Outbound Application Databank Link
 - EDIOEA Outbound EDI Databank Directory
 - EDIOES Outbound EDI Databank Message Store
 - EDIOECA Outbound EDI Databank Change Audit

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change data set names **YOUR.CICS.SDFHLOAD** and **YOUR.CICS.DFHCS** as required by your installation.
- If you elected to retain the DSNAME parameters in the file definitions, change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- Globally change the value **SIM** to the three-character system image specified on the Pre-installation Worksheet in Chapter 2.
- Globally change the value **PIM** to the three-character program image specified on the Pre-installation Worksheet in Chapter 2.

- If you changed the CICS Group Name on the Pre-installation Worksheet in Chapter 2 from the default value **GENBSC**, globally change the value in the **GROUP** parameter in each definition to the value you are using.
- Review Local Shared Resource Pool IDs for your system. To manage overhead, most Gentran:Basic files are assigned to an LSR pool. Files that cannot be installed in a pool use the parameter **LSRPOOLID (NONE)** in the definitions.
- If you are installing into an MRO environment, you will need to uncomment the **KEYLENGTH** and **RECORDSIZE** parameters for each resource definition.

You may also need to uncomment the **REMOTESYSTEM (NAME)** parameter for each resource and change the value **NAME** to the 4-character alphanumeric name of the CICS region where the files reside.

- If you are installing into an MRO environment, you may need to run this job multiple times depending on whether or not you are sharing the CSD file among the regions and whether or not you are using different group names in each region. If you do need to run the IMPCCP02 job multiple times, modify the CSD file name and/or group name to meet your needs.
- Read the comments within the JCL and follow additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 4 Update the CICS System Initialization Table (SIT).*Typically performed by:* System Installer

Check the box next to each task as you complete it.

EXCI is supported by the multi-region operation (MRO) facility of the CICS inter-region communication (IRC) facility. You must review your SIT to insure that the following two parameters are specified to support these facilities:

- IRCSTRT=YES**, which specifies that IRC is to be started up at system initialization.
- ISC=YES**, which specifies that the CICS programs required for inter-region or intersystem communication are to be included.

Completed by: _____

Date: _____ Time: _____

Step 5 Update the CICS Startup JCL.

If you elected to remove the DSNNAME parameters from the file definitions when you established the online environment during installation, you must make the changes described below.

If you did not allocate these files to CICS with DD statements, there are no changes required; continue with **Step 6**.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Remove the following DD statements:
 - EDIIAP Inbound Application Databank Pending
 - EDIQ095 Inbound Application Databank Transaction Queue
 - EDIIEP Inbound EDI Databank Pending
 - EDIOAP Outbound Application Databank Pending
 - EDIOEP Outbound EDI Databank Pending
 - EDIQ091 Outbound EDI Databank Transaction Queue

Note: The files associated with these DD statements can also be physically deleted.

- Add the following DD statement:
 - EDINRC Network Reconciliation

Completed by: _____

Date: _____ Time: _____

Step 6 Start the CICS region.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- If your CICS region was active when the CSD was updated, shut it down and restart it to install the changes. If your CICS region was not active, start it.

Completed by: _____

Date: _____ **Time:** _____

Step 7

Update the System Configuration.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Log on to your CICS region.
- Log on to Gentran:Basic.
- Select option **4** from the Gentran Main Menu (EDIM001) to navigate to the Administrative Maintenance subsystem.
- Select option **3** from the Administrative Main Menu (EDIM210) to display the Configuration Directory (EDIM230).
- Type **S** in the A (action code) field next to Record Type 0 (On-line Processing Options) and press **PF5** to display the Configuration Maintenance (EDIM231) screen.
- Verify that the specified Program Image is the Program Image that you use in your CICS region. This is important because the Program Image is used by EXCI when calling your CICS region. If it is *not* correct, change it to the correct value and press **PF10** to update the system.
- Press **PF5** to list more options.
- Type **Y** in the Concurrency Enabled field. Type the APPLID of your CICS region in the CICS APPLID for Concurrency field. You can obtain the APPLID from the SIT APPLID parameter of your CICS region. Then press **PF10** to update the system.
- Press **PF4** twice to return to the Configuration Directory (EDIM230).
- Type **S** in the A (action code) field next to Record Type 2 (Databank Processing Options) and press **PF5** to display the Configuration Maintenance (EDIM231) screen.
- Verify that the first three positions of the specified Databank Manager Transaction ID is the System Image that you use in your CICS region. This is important because even though the Databank Manager is not used when concurrency is enabled, the System Image portion of it is used by EXCI when calling your CICS region. If it is *not* correct, change it to the correct value and press **PF10** to update the system.
- Exit from and restart your Gentran:Basic online system to completely apply the configuration changes.

Completed by: _____

Date: _____ **Time:** _____

After you have successfully completed these tasks, concurrent processing implementation is complete.

Backing Out Concurrent Processing

If you have implemented concurrent processing and later decide that it is not right for your installation, you can back it out and revert to processing Inbound and Outbound jobs in the traditional non-concurrent mode. During the implementation of concurrent processing, numerous changes were made to the Gentran for zSeries batch and on-line environments. The process of backing out concurrent processing essentially steps backwards through those changes and reverses them.

You will need the following information while performing the back out process:

- Your three-character System Image.
- Your three-character Program Image.
- The Group Name used when the CICS resources for your Gentran:Basic for zSeries online environment were defined.
- The High Level Qualifier used when your Gentran for zSeries data sets were defined.

You will also need the proper security authorization to update your Gentran for zSeries batch and online environments.

These steps take you through the tasks required to back out concurrent processing.

Step 1

Update the Configuration File.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Log on to your CICS region.
- Log on to Gentran:Basic.
- Select option **4** from the Gentran Main Menu (EDIM001) to navigate to the Administrative Maintenance subsystem.
- Select option **3** from the Administrative Main Menu (EDIM210) to display the Configuration Directory (EDIM230).
- Type **S** in the A (action code) field next to Record Type 0 (On-line Processing Options) and press **PF5** to display the Configuration Maintenance (EDIM231) screen.
- Press **PF5** to list more options.
- Type **N** in the Concurrency Enabled field and press **PF10** to update the system.
- Exit from your Gentran:Basic online system.
- Shut down your CICS region.

Completed by: _____

Date: _____ Time: _____

Step 2 Update the CICS Startup JCL.

When establishing the online environment during the installation of Gentran:Basic, you were given the option to remove the DSNAMES parameters from the file definitions when customizing member BSCRDOF and instead allocate the files using DD statements in the CICS startup JCL.

If you did not choose to remove the DSNAMES parameters from the file definitions, there are no changes required; continue with **Step 3**.

If you did choose to remove the DSNAMES parameters from the file definitions and instead allocate the files using DD statements in the CICS startup JCL, you must update the CICS startup JCL as described below.

Typically performed by: System Installer

Check the box next to each task as you complete it.

Add DD statements for the following files to the CICS startup JCL:

- EDIAP Inbound Application Databank Pending
- EDIQ095 Inbound Application Databank Transaction Queue
- EDIIEP Inbound EDI Databank Pending
- EDIOAP Outbound Application Databank Pending
- EDIOEP Outbound EDI Databank Pending
- EDIQ091 Outbound EDI Databank Transaction Queue

Note: Sample DD statements for these files can be found in the BSCCICS member in the JCL file.

Note: The files associated with these DD statements must exist. If you physically deleted them when implementing concurrent processing, they must be rebuilt using the DEFDB member in the JCL file.

Delete the DD statement for the following file from the CICS startup JCL:

- EDINRC Network Reconciliation

Completed by: _____

Date: _____ **Time:** _____

Step 3 Update the CICS System Initialization Table (SIT).

Typically performed by: System Installer

Check the box next to each task as you complete it.

- During the implementation of concurrent processing, the IRCSTRT=YES and ISC=YES parameters were added to your SIT if they were not already specified. If they were added during the implementation, they can be removed.

Completed by: _____

Date: _____ **Time:** _____

Step 4 Update the CICS online environment.

In this step, you will customize JCL member BOCCP01. This job executes the CICS batch utility DFHCSDUP to update the CICS System Definition (CSD) file. It performs the following updates:

- Deletes the EXCI protocol CONNECTION that was defined for concurrency.
- Deletes the EXCI protocol SESSIONS that was defined for concurrency.
- Deletes the EXCI "server" programs that were defined for concurrency:
 - EDIBCTL Inbound and Outbound Control file EXCI Server
 - EDIBDBIA Inbound Application Databank EXCI Server
 - EDIBDBIE Inbound EDI Databank EXCI Server
 - EDIBDBOA Outbound Application Databank EXCI Server
 - EDIBDBOE Outbound EDI Databank EXCI Server
- Deletes the definition for the following file because it is no longer owned and updated by CICS:
 - EDINRC Network Reconciliation
- Defines the following transaction. Because the databanks are no longer owned and updated by CICS, this transaction is needed:
 - EDID Databank Scanner
- Defines the following programs associated with the databank scanner. Because the databanks are no longer owned and updated by CICS, these programs are needed:
 - EDIX290 Databank Monitor
 - EDIX291 Databank Manager for Inbound EDI Databank
 - EDIX292 Databank Manager for Outbound EDI Databank
 - EDIX293 Databank Manager for Inbound Application Databank
 - EDIX294 Databank Manager for Outbound Application Databank
- Defines the following files associated with the databank scanner. Because the databanks are no longer owned and updated by CICS, these files are needed:
 - EDIAP Application Databank Pending
 - EDIQ095 Inbound Application Databank Transaction Queue
 - EDIIEP Inbound EDI Databank Pending
 - EDIOAP Outbound Application Databank Pending
 - EDIOEP Outbound EDI Databank Pending
 - EDIQ091 Outbound EDI Databank Transaction Queue

- Alters the following files to change the LSRPOOLID parameter from (1) to (NONE). Because the shareoptions of these files are being changed from 2,3 to 4,3, they can no longer be allocated in an LSRPOOL.
 - EDIPINB Inbound Partner Control
 - EDIPOTB Outbound Partner Control
- Alters the following files to change the LSRPOOLID parameter from (1) to (NONE) and to change the ADD, DELETE, and UPDATE parameters from (YES) to (NO). Because these files are no longer owned and updated by CICS, they can no longer be allocated in an LSRPOOL and they must not have full access authorization:
 - EDIIAA Inbound Application Databank Directory
 - EDIIAS Inbound Application Databank Message Store
 - EDIIACA Inbound Application Databank Change Audit
 - EDIIEA Inbound EDI Databank Directory
 - EDIIES Inbound EDI Databank Message Store
 - EDIIECA Inbound EDI Databank Change Audit
 - EDIIEL Inbound EDI Databank Link
 - EDIOAA Outbound Application Databank Directory
 - EDIOAS Outbound Application Databank Message Store
 - EDIOACA Outbound Application Databank Change Audit
 - EDIOAL Outbound Application Databank Link
 - EDIOEA Outbound EDI Databank Directory
 - EDIOES Outbound EDI Databank Message Store
 - EDIOECA Outbound EDI Databank Change Audit

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change data set names **YOUR.CICS.SDFHLOAD** and **YOUR.CICS.DFHCS**D as required by your installation.
- If you elected to retain the DSNAME parameters in the file definitions, change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- Globally change the value **SIM** to your three-character system image.
- Globally change the value **PIM** to your three-character program image.

- If you changed the group name from the default value **GENBSC** when you established the online environment during installation, substitute your group names in the **GROUP** parameters.
- If you are backing out of an MRO environment, you will need to uncomment the **KEYLENGTH** and **RECORDSIZE** parameters for each file resource definition.

You may also need to uncomment the **REMOTESYSTEM(NAME)** parameter for the transaction and file resource definitions and change the value **NAME** to the 4-character alphanumeric name of the CICS region where the files reside.
- If you are backing out of an MRO environment, you may need to run this job multiple times depending on whether or not you are sharing the CSD file among the regions and whether or not you are using different group names in each region. If you do need to run the BOCCP02 job multiple times, modify the CSD file name and/or group name to meet your needs.
- Read the comments within the JCL and follow additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 5 Change the Shareoptions on the Inbound and Outbound Partner Control files.

In this step, you will customize JCL member **BOCCP02**. This job will alter the shareoptions on the two files from 2,3 to 4,3.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Add a job card.
- Change the data set names as required by your installation. Change only the first two index levels (**GENTRAN.V6X4**).
- Read the comments within the JCL and follow any additional instructions.
- Submit the job.
- Verify the job results. You should never receive a return code greater than 0.

Completed by: _____

Date: _____ **Time:** _____

Step 6 Update Gentran:Basic batch JCL.

Typically performed by: System Installer

Check the box next to each task as you complete it.

When implementing concurrent processing, a STEPLIB DD statement for the SDFHEXCI load library was added to the JCL that is used to execute each of the following applications. It may be removed.

<input type="checkbox"/>	EBDI001	Inbound Editor
<input type="checkbox"/>	EBDI002	Outbound Editor
<input type="checkbox"/>	EBDI011A	Outbound Envelope Generator for Acknowledgements
<input type="checkbox"/>	EBDI011M	Outbound Envelope Generator for Mapping
<input type="checkbox"/>	EBDI041	Inbound Mapper
<input type="checkbox"/>	EBDI042	Outbound Mapper
<input type="checkbox"/>	EDID101	Outbound Application Databank Maintenance
<input type="checkbox"/>	EDID201	Outbound EDI Databank Maintenance
<input type="checkbox"/>	EDID205	Outbound EDI Databank Extract
<input type="checkbox"/>	EDID301	Inbound EDI Databank Maintenance
<input type="checkbox"/>	EDID401	Inbound Application Databank Maintenance
<input type="checkbox"/>	EDID405	Inbound Application Databank Extract
<input type="checkbox"/>	EDID510	Acknowledgement Reconciliation/Monitor
<input type="checkbox"/>	EDID550	EDI Databank Inquiry
<input type="checkbox"/>	EDID551	Application Databank Inquiry
<input type="checkbox"/>	EDID850	Network Reconciliation

When implementing concurrent processing, we recommended that the DD statements for the following files either be commented out or removed from the JCL for each of the specified applications. Because CICS no longer owns and updates the Databank, Inbound Partner Control, and Outbound Partner Control files, the DD statements must be added back into the JCL. If you chose not to comment out or remove the DD statements when you implemented concurrent processing, you may skip this task.

- Add the **SYS092**, **EDIIEA**, **EDIIES**, and **EDIIECA** DD statements to JCL that executes the Inbound Editor EBDI001.
- Add the **EDIOEA**, **EDIOES**, **EDIOAL**, and **EDINRC** DD statements to JCL that executes the Outbound Editor EBDI002.
- Add the **EDIIAA**, **EDIIAS**, and **EDIIEL** DD statements to JCL that executes the Inbound Mapper EBDI041.
- Add the **EDIOAA**, **EDIOAS**, and **EDIOACA** DD statements to JCL that executes the Outbound Mapper EBDI042.
- Add the **EDIOECA**, **EDINRC**, and **EDIQ091** DD statements to JCL that executes the Outbound EDI Databank Extract EDID205.

- Add the **EDIIACA** and **EDIQ095** DD statements to JCL that executes the Inbound Application Databank Extract EDID405.
- Add the **EDINRC** DD statement to JCL that executes the Network Reconciliation EDID850.

When implementing concurrent processing, the Databank Maintenance applications required the addition of a new run-time parameter of CONCURRENCY-ENABLED with a value of YES. Update the JCL streams that execute each of the following Databank Maintenance applications to either remove this run-time parameter or change it to **NO**.

- EDID101 Outbound Application Databank Maintenance
- EDID201 Outbound EDI Databank Maintenance
- EDID301 Inbound EDI Databank Maintenance
- EDID401 Inbound Application Databank Maintenance

Completed by: _____

Date: _____ Time: _____

Step 7 Update Gentran:Plus batch JCL.

If you have not implemented the Gentran:Plus for zSeries add-on product in your Gentran environment, there are no changes required; continue with **Step 8**.

Typically performed by: System Installer

Check the box next to each task as you complete it.

When implementing concurrent processing, a STEPLIB DD statement for the SDFHEXCI load library was added to the JCL that is used to execute each of the following applications. It may be removed.

- | | | |
|--------------------------|----------|---|
| <input type="checkbox"/> | EBDIMBX | Update EDI DB with Communications Batch Number from Connect |
| <input type="checkbox"/> | EBDI059 | INS Network Reconciliation - command set 2 |
| <input type="checkbox"/> | EBDI059A | INS Network Reconciliation - command set 1 |

Completed by: _____

Date: _____ **Time:** _____

Step 8 Update Gentran:Structure batch JCL.

If you have not implemented the Gentran:Structure for zSeries add-on product in your Gentran environment, there are no changes required; continue with **Step 9**.

Typically performed by: System Installer

Check the box next to each task as you complete it.

When implementing concurrent processing, a STEPLIB DD statement for the SDFHEXCI load library was added to the JCL that is used to execute each of the following applications. It may be removed.

- | | | |
|--------------------------|---------|-------------------------------------|
| <input type="checkbox"/> | EDID553 | Application Databank Inquiry |
| <input type="checkbox"/> | EBDI083 | Inbound Pre-processor for Structure |

Completed by: _____

Date: _____ **Time:** _____

Step 9

Start the CICS region.

This completes backing out concurrent processing.

Typically performed by: System Installer

Check the box next to each task as you complete it.

Start the CICS region and commence non-concurrent processing.

Completed by: _____

Date: _____ **Time:** _____

Implementing the Databank Facility

The databank facility can store information and data in a variety of ways. You can implement all, some, or none of the databank files.

This appendix contains the following topics.

Topic	Page
About the Databank Facility	A-2
Business Requirements	A-3
Technical Requirements	A-6
Reallocating Files.....	A-6
Revising CICS Resource Definitions and Submission JCL.....	A-6
Modifying the Online System Configuration File	A-6
Setting up Batch Control Parameters	A-6
Defining Profile Options.....	A-7
Enabling/Disabling Application Data Edit	A-7
Maintenance Procedures	A-8
Applying Online Updates.....	A-8
Performing File Maintenance.....	A-8
Enabling Network Tracking.....	A-9

About the Databank Facility

The databank facility includes the following four databanks:

- Outbound Application Databank
- Outbound EDI Databank
- Inbound EDI Databank
- Inbound Application Databank

Each file is unique by direction, type, and store level, as described below:

Direction	=	Outbound or Inbound
Type	=	Application data or EDI data
Store Level	=	Full, Directory, or None

Store level indicates how much information or data can be stored on each databank file. Following are the three store level configurations:

None	=	No information is to be stored on the associated databank file.
Directory	=	Control and tracking information are to be stored on the associated databank file.
Full	=	Control and tracking information are to be stored on the associated databank file, as well as the actual data (message store).

Implementing the databank facility is optional. The criteria for your databank configuration strategy depends on which Gentran:Basic features you want to use.

Business Requirements

This section contains a worksheet listing Gentran:Basic features that, when utilized, require specific databank configuration criteria. The worksheet should be completed by someone who is familiar with the EDI requirements of your organization.

Immediately following the worksheet is a chart listing each databank file and its store level value (Full, Directory, or None).

When a Gentran:Basic feature in the worksheet meets your business needs, mark the appropriate databank file and its store level on the chart. After the worksheet is completed, any databank file on the chart without a store level value assigned to it should be marked as **None**.

After you complete the chart, proceed to the next section, "Technical Requirements." This section helps you determine what technical changes are necessary to implement your databank configuration.

Databank Facility – Business Requirements Worksheet	
Acknowledgment Reconciliation/Monitoring	_____
	(Yes/No)
This feature requires Directory implementation of the Outbound EDI Databank.	
Archive/Restore	_____
	(Yes/No)
This feature requires implementation of the specific databank. To archive/restore control information, at least directory level is required; to archive/restore data, Full Message Store level is required.	
For example, archive and restore inbound application data requires Full implementation of the Inbound Application Databank.	
Deferred Enveloping	_____
	(Yes/No)
This feature requires Full implementation of the Outbound EDI Databank.	
Network Tracking	_____
	(Yes/No)
This feature requires Directory implementation of the Outbound EDI Databank.	
Online Databank Facility	_____
	(Yes/No)
This feature requires any combination of Full or Directory implementation for any number of the four databank files.	
Reprocessing	_____
	(Yes/No)
For outbound applications, this feature requires Full implementation of the Outbound Application Databank.	

	(Yes/No)
For inbound EDI interchanges, this feature requires Full implementation of the Inbound EDI Databank.	
Selective Extract	_____
	(Yes/No)
For inbound applications, this feature required Full implementation of the Inbound Application Databank.	

	(Yes/No)
For outbound EDI interchanges, this feature requires Full implementation of the Outbound EDI Databank.	
Completed by: _____	
Date: _____	Time: _____

Databank Facility – Business Requirements Worksheet

Summary

The previous section explains primary features that require some form of databank implementation. To ensure that your configuration strategy is completed, review the following documents:

- See the Databank Utility Programs and Reports and Databank Files chapters in the *Gentran:Basic for zSeries Release 6.4 Technical Reference Guide* for various databank program information.
- See the Databank Subsystem chapter in the *Gentran:Basic for zSeries Release 6.4 User's Guide*.

Databank Facility – Business Requirements Chart

Outbound Application	<input type="checkbox"/> Full <input type="checkbox"/> Directory <input type="checkbox"/> None
Outbound EDI	<input type="checkbox"/> Full <input type="checkbox"/> Directory <input type="checkbox"/> None
Inbound EDI	<input type="checkbox"/> Full <input type="checkbox"/> Directory <input type="checkbox"/> None
Inbound Application	<input type="checkbox"/> Full <input type="checkbox"/> Directory <input type="checkbox"/> None
Completed by: _____	
Date: _____ Time: _____	

Note: If you are *not* using databanking, set all databanking levels to **N** and set the databank security levels to **N** for all User IDs.

Technical Requirements

This section helps you determine what technical changes are necessary to implement your databank configuration.

Review the following items and perform the appropriate tasks for your databank configuration.

Reallocating Files

Depending on which databank files and store levels you choose to implement, you may need to reallocate additional space to meet your production requirements.

For the respective databank, see the Disk Space Requirement section in the Databank Files chapter of the *Gentran:Basic for zSeries Release 6.4 Technical Reference Guide*.

Revising CICS Resource Definitions and Submission JCL

Review the CICS resource definitions and CICS submission JCL that you selected to install. Verify that the databank files you do not plan to implement are commented out and that the databank files you *do* plan to implement are *not* commented out.

Modifying the Online System Configuration File

Implementation of the databank facility requires that specific configuration options be set.

See Chapter 8 of this guide for further information on updating the System Configuration File.

Setting up Batch Control Parameters

You control how each databank is used in your Gentran:Basic batch environment with a wide range of batch control parameters. Each parameter is delivered with a default setting. Review these defaults, and if necessary, revise them to meet your requirements.

Also, review the databank batch control parameters for the execution of the editors and mappers.

See the Databank Utility Programs and Reports chapter of the *Gentran:Basic for zSeries Release 6.4 Technical Reference Guide* for detailed information on batch control parameters.

Defining Profile Options

To control the use of network tracking and databank by Profile, you must define profile options for the databank facility.

See The Partner Subsystem chapter in the *Gentran:Basic for zSeries Release 6.4 User's Guide* for further information on defining profile options.

Enabling/Disabling Application Data Edit

When message store level is implemented, you have the ability to edit inbound and outbound application data.

If you do want to use this feature, rename load module EDIX296 to EDIX296X, and then rename load module EDIX297 to EDIX296. After you have rename these programs, the Application Data Edit feature is disabled.

Maintenance Procedures

This section explains the three forms of maintenance required to maintain your databank environment.

Applying Online Updates

When performing actions (e.g., Delete, Acknowledge, Reset) against a databank entry by means of the online Databank subsystem, the request creates a transaction. These transactions are applied to the databank files by the batch programs listed below:

- Outbound Application databank transactions are applied by means of the Outbound Mapper (EBDI042) (position 38, Databank Reprocess Switch, of the Inbound Mapper Parameter Record #1 must be set to **Y**).
- Outbound EDI Databank transactions are applied by means of the Outbound EDI Extract (EDID205) (APPLY-UPDATES-ONLY must be set to **Yes** in the Outbound EDI Databank Extract program).
- Inbound EDI Databank transactions are applied by means of the Inbound Editor (EBDI001) (the INBOUND EDI DATABANK REPROCESS global parameter must be present).
- Inbound Application Databank transactions are applied by means of the Inbound Application Extract (EDID405) (APPLY-UPDATES-ONLY must be set to **Yes** in the Inbound Application Databank Extract program).

The online databank manager transaction (shipped as "SIMD" – EDIX290 program) removes the request transactions from the pending files once the transactions have been applied by means of the batch programs above.

See Inbound Processing Programs, Outbound Processing Programs, and Databank Utility Programs and Reports chapters in the *Gentran: Basic for zSeries Release 6.4 Technical Reference Guide* for detailed information on control parameters for the batch programs previously listed.

Performing File Maintenance

The frequency with which the network reconciliation file and databank files should be maintained depends on file volume, space allocation, and retention requirements. The following programs perform file maintenance:

- Outbound Application Databank Maintenance (EDID101)
- Outbound EDI Databank Maintenance (EDID201)
- Inbound EDI Databank Maintenance (EDID301)
- Inbound Application Databank Maintenance (EDID401)
- Network Reconciliation Maintenance (EDID860)

See the Databank Utility Programs and Reports and Network Utility Programs chapters in the *Gentran: Basic for zSeries Release 6.4 Technical Reference Guide* for detailed information on control parameters for the maintenance programs.

See the Databank Files chapter of the *Gentran:Basic for zSeries Release 6.4 Technical Reference Guide* for further information on the files previously listed.

Note: We recommend that you back up all files before performing maintenance.

Enabling Network Tracking

The network tracking feature reconciles network status information received from your networks, back to interchanges that have been sent. After you perform the steps below, the network status is updated on the databank screens.

To enable network tracking in the online databanks, follow these steps:

Step 1. Set the Network Tracking switch to **Y** on the Control Information screen.

Step 2. Retrieve data format reports from your network(s).

See the COMMERCE:Network Response Processor section for the respective network in the Network Utility Programs chapter of the *Gentran:Basic for zSeries Release 6.4 Technical Reference Guide* to determine which networks can be processed.

Step 3. Run the appropriate network response processor.

Use the files created in Step 1 to format the network responses into the records needed to update the databank.

Step 4. Run the Network Reconciliation (EDID850) program.

Use the files created by the response processors to run the reconciliation programs. This program reconciles and posts the network status back to the interchanges on the Outbound EDI Databank. At this point, the network status for interchanges is available on the databank facility.

Library Descriptions

This appendix contains the following library descriptions:

Topic	Page
Job Control (JCL) Library	B-3
New System Installation	B-3
Conversion Members for Current Release 6.0 Users.....	B-4
Conversion Members for Current Release 6.1 Users.....	B-5

Job Control (JCL) Library

New System Installation

BOCCP01	Back out concurrent processing - update CSD.
BOCCP02	Back out concurrent processing - alter shareoptions.
DEFBASE	Defines the base system files for new installations – Partner/Qualifier mode.
DEFBASEM	Defines the base system files for new installations – Mixed mode.
DEFBASER	Defines the base system files for new installations – Relationship mode.
DEFCA	Defines the change audit VSAM files.
DEFDB	Defines the databank files.
DEFDTCNV	Defines the Gentran Data Translation Migration file.
DEFHELP	Defines the help files.
DEFMAP	Defines the mapping files.
DEFPARTR	Defines Relationship Partner files.
DEFPCNV	Defines the Gentran:Basic partner relationship conversion VSAM files.
DEFPRF	Defines CICS resources for the partner relationship file.
DEFPRM	Defines CICS resources for the partner relationship migration.
DEFRDO	Defines CICS resources for Gentran:Basic.
DEFUNLD	Defines permanent files for the Gentran:Basic Unload/Upload feature.
DELFILES	Deletes installation files.
IMPCCP01	Implement concurrent processing – alter shareoptions.
IMPCCP02	Implement concurrent processing – update CSD.
PCBSCFX1	Allocates Gentran:Basic fix upload file on mainframe.
PCBSCFX2	Creates Gentran:Basic fix files.
PCBSCPD1	Allocates Gentran:Basic product upload file on mainframe.
PCBSCPD2	Unloads Gentran:Basic from product upload files.
PCSASC1	Allocates SAS/C Upload file on mainframe.
PCSASC2	Unloads SAS/C Run-time libraries from the product upload.
PCSTAND1	Allocates standards upload files on mainframe.
PCSTAND2	Creates sequential standards files from CD.
PCSTDCLN	Deletes sequential standards files to save DASD space.
UPDTMSG	Updates the ERRCTL file with changes.

Conversion Members for Current Release 6.0 Users*System Configuration File*

CNCFG60 Converts the Gentran:Basic portion of the Release 6.0 System Configuration file to the Release 6.4 structure.

Partner Subsystem

CNPRT60 Converts the Release 6.0 Partner Profile and Control Number files to the Release 6.4 structure.

CNPRT60P Incrementally converts the Release 6.0 Partner Profile and Control Number files to the Release 6.4 structure.

Partner Cross Reference File

CNXRF60 Converts the entire Release 6.0 Partner Cross Reference file to the Release 6.4 structure.

Databank Subsystem

CNDBA60I Converts the Release 6.0 inbound application databank to the Release 6.4 structure.

CNDBA60O Converts the Release 6.0 outbound application databank to the Release 6.4 structure.

CNDBE60I Converts the Release 6.0 inbound EDI databank to the Release 6.4 structure.

CNDBE60O Converts the Release 6.0 outbound EDI databank to the Release 6.4 structure.

Security Subsystem

CNSEC60 Converts the Release 6.0 security file to the Release 6.4 structure.

Mapping Subsystem

CNMAP60 Converts the entire set of Release 6.0 inbound and outbound maps to the Release 6.4 structure.

CNMAP60A Incrementally converts Release 6.0 application records to Release 6.4.

CNMAP60C Incrementally converts Release 6.0 codes records to Release 6.4.

CNMAP60T Incrementally converts Release 6.0 transaction records to Release 6.4.

Standards Subsystem

CNSTD60 Converts the Release 6.0 standards to the Release 6.4 Standards subsystem.

Error Message Subsystem

CNMSG60 Converts the Release 6.0 error message file to the Release 6.4 structure.

Conversion Members for Current Release 6.1 Users***System Configuration File***

CNCFG61 Converts the Gentran:Basic portion of the Release 6.1 System Configuration file to the Release 6.4 structure.

Partner Subsystem

CNPRT61 Converts the Release 6.1 Partner Profile and Control Number files to the Release 6.4 structure.

CNPRT61P Incrementally converts the Release 6.1 Partner Profile and Control Number files to the Release 6.4 structure.

Partner Cross Reference File

CNPRL61 Converts the Release 6.1 Partner Relationship file to Release 6.4 and builds an alternate index.

CNXRF61 Converts the entire Release 6.1 Partner Cross Reference file to the Release 6.4 structure.

Databank Subsystem

CNDBA61I Converts the Release 6.1 inbound application databank to the Release 6.4 structure.

CNDBA61O Converts the Release 6.1 outbound application databank to the Release 6.4 structure.

CNDBE61I Converts the Release 6.1 inbound EDI databank to the Release 6.4 structure.

CNDBE61O Converts the Release 6.1 outbound EDI databank to the Release 6.4 structure.

Security Subsystem

CNSEC61 Converts the Release 6.1 security file to the Release 6.4 structure.

Mapping Subsystem

CNMAP61 Converts the entire set of Release 6.1 inbound and outbound maps to the Release 6.4 structure.

CNMAP61A Incrementally converts Release 6.1 application records to Release 6.4.

CNMAP61C Incrementally converts Release 6.1 codes records to Release 6.4.

CNMAP61T Incrementally converts Release 6.1 transaction records to Release 6.4.

Standards Subsystem

CNSTD61 Converts the Release 6.1 standards to the Release 6.4 Standards subsystem.

Error Message Subsystem

CNMSG61 Converts the Release 6.1 Error Message file to the Release 6.4 structure.

Conversion Members for Current Release 6.2 Users*System Configuration File*

CNCFG62 Converts the Gentran:Basic portion of the Release 6.2 System Configuration file to the Release 6.4 structure.

Partner Subsystem

CNPRT62 Converts the Release 6.2 Partner Profile and Control Number files to the Release 6.4 structure.

CNPRT62P Incrementally converts the Release 6.2 Partner Profile and Control Number files to the Release 6.4 structure.

Partner Cross Reference File

CNPRL62 Converts the Release 6.2 Partner Relationship file to Release 6.4 and builds an alternate index.

CNXRF62 Converts the entire Release 6.2 Partner Cross Reference file to the Release 6.4 structure.

Databank Subsystem

CNDBA62I Converts the Release 6.2 inbound application databank to the Release 6.4 structure.

CNDBA62O Converts the Release 6.2 outbound application databank to the Release 6.4 structure.

CNDBE62I Converts the Release 6.2 inbound EDI databank to the Release 6.4 structure.

CNDBE62O Converts the Release 6.2 outbound EDI databank to the Release 6.4 structure.

Security Subsystem

CNSEC62 Converts the Release 6.2 security file to the Release 6.4 structure.

Mapping Subsystem

CNMAP62 Converts the entire set of Release 6.2 inbound and outbound maps to the Release 6.4 structure.

CNMAP62A Incrementally converts Release 6.2 application records to Release 6.4.

CNMAP62C Incrementally converts Release 6.2 codes records to Release 6.4.

CNMAP62T Incrementally converts Release 6.2 transaction records to Release 6.4.

Standards Subsystem

CNSTD62 Converts the Release 6.2 standards to the Release 6.4 Standards subsystem.

Error Message Subsystem

CNMSG62 Converts the Release 6.2 Error Message file to the Release 6.4 structure.

Conversion Members for Current Release 6.3 Users*System Configuration File*

CNCFG63 Converts the Gentran:Basic portion of the Release 6.3 System Configuration file to the Release 6.4 structure.

Partner Subsystem

CNPRT63 Converts the Release 6.3 Partner Profile and Control Number files to the Release 6.4 structure.

CNPRT63P Incrementally converts the Release 6.3 Partner Profile and Control Number files to the Release 6.4 structure.

CNPRL63 Converts the Release 6.3 Partner Relationship file to Release 6.4 and builds an alternate index.

CNXRF63 Converts the entire Release 6.3 Partner Cross Reference file to the Release 6.4 structure.

Databank Subsystem

CNDBA63I Converts the Release 6.3 inbound application databank to the Release 6.4 structure.

CNDBA63O Converts the Release 6.3 outbound application databank to the Release 6.4 structure.

CNDBE63I Converts the Release 6.3 inbound EDI databank to the Release 6.4 structure.

CNDBE63O Converts the Release 6.3 outbound EDI databank to the Release 6.4 structure.

Security Subsystem

CNSEC63 Converts the Release 6.3 security file to the Release 6.4 structure.

Mapping Subsystem

CNMAP63 Converts the entire set of Release 6.3 inbound and outbound maps to the Release 6.4 structure.

CNMAP63A Incrementally converts Release 6.3 application records to Release 6.4.

CNMAP63C Incrementally converts Release 6.3 codes records to Release 6.4.

CNMAP63T Incrementally converts Release 6.3 transaction records to Release 6.4.

Standards Subsystem

CNSTD63 Converts the Release 6.3 standards to the Release 6.4 Standards subsystem.

Error Message Subsystem

CNMSG63 Converts the Release 6.3 Error Message file to the Release 6.4 structure.

Separator Control File

CNSEP63 Converts the Release 6.3 Separator Control File to Release 6.4.

Conversion Members for All Users

CNDBM	Converts (re-initializes) miscellaneous databank files.
CNMAPAIX	Builds and populates application, codes, and transaction alternate key files.
CNMAPDEF	Defines the empty VSAM map files to receive incremental conversion.
CNPRTDEF	Defines the empty Partner Profile and Control Number VSAM files to receive incremental conversions.

Online CICS Environment Definition

BSCCICS	Contains the CICS startup JCL DD statements for Gentran:Basic.
BSCCICSD	Contains the CICS startup JCL DD statements for destinations.
BSCNAME	Renames the CICS load modules with the program image.
BSCRDOD	Contains the CICS resource definitions for destinations.
BSCRDOF	Contains the CICS resource definitions for files.
BSCRDOPM	Contains the CICS resource definitions for programs and mapsets.
BSCRDOT	Contains the CICS resource definitions for transactions.
PRFCICS	Contains the CICS startup JCL DD statements for the partner relationship file.
PRFRDOF	Contains the CICS resource definitions for the partner relationship file.
PRMCICS	Contains the CICS startup JCL DD statements for partner relationship migration.
PRMNAME	Renames the CICS load modules for partner relationship migration with the program image.
PRMRDOF	Contains the CICS resource definitions for the partner relationship migration files.
PRMRDOPM	Contains the CICS resource definitions for the partner relationship migration programs and mapsets.

Databank Maintenance

EXECG300	Purges orphan EDI databank records.
----------	-------------------------------------

Standards Installation and Maintenance

DEFSTD	Loads the online standards files for new installations.
DEFTBL	Defines the Optimized Standards Table for new installations.
UPDSTD1	Prepares for standards update.
UPDSTD2	Standards maintenance.

Customer Service Support

\$INDEX	An index of all the JCL library members
CHANGES	An index of all the JCL modifications made for Gentran:Basic Release 6.4

DBGMAPIN	Copies the mapping files and input EDI data to tape to assist Customer Support.
DBGMAPOT	Copies the mapping files and output application data to tape to assist Customer Support.
GNSYSCPY	(DEBUG) Backs up all Gentran principal files (mapping, partner, standards, and data) to tape to assist Customer Support.

Program Execution

EXECJCLR	Generates a report of the JCL in the EDIRJCL file.
EXECJCLX	Adds JCL to the EDIRJCL file.
EXECLMT	Executes the online Log File Utility program.
EXECRPTM	JCL for online submission of Mapping Print report.
EXEC001	Executes the Inbound Editor program.
EXEC002	Executes the Outbound Editor program.
EXEC002A	Executes the Outbound Editor program for outbound acknowledgments.
EXEC002B	Executes the Outbound Envelope Generator and Editor programs for unenveloped outbound acknowledgments.
EXEC005	Executes the Batch Partner Maintenance program.
EXEC006	Executes the Partner File Print program.
EXEC006O	JCL for online submission of Partner Print program.
EXEC007	Executes the Partner Error Rejection report.
EXEC008	Executes the Partner File Inquiry program.
EXEC009	Executes the Security File Display Report program.
EXEC010	Executes the Inbound Edit Data Unwrap program.
EXEC011A	Executes the Envelope Generation program for outbound acknowledgments.
EXEC011M	Executes the Envelope Generation program for Mapping Data.
EXEC015	Executes the Inbound Data Split program.
EXEC016	Executes the Outbound Data Split program.
EXEC017	Executes the Received Acknowledgment Report program.
EXEC019	Executes the EDI Data Print Report program.
EXEC030	Executes the Batch Table Extract program.
EXEC032	Executes the Standards Copy program.
EXEC033	Executes the Standards Change Audit Maintenance program.
EXEC035	Executes the Optimized Standards Table Print program.
EXEC036	Executes the EDI Standard Print program.
EXEC036O	JCL for online submission of Standards Print report.
EXEC037	Executes the Standards Change Audit Inquiry program.

EXEC041	Executes the Inbound Mapping program.
EXEC042	Executes the Outbound Mapping program.
EXEC052	Executes the Mapping Report in Standard Sequence Report program.
EXEC053	Executes the Mapping Report in Application Sequence Report program.
EXEC055	Executes the 980 Transaction Generation program.
EXEC055A	Executes and formats the needed 980 transactions.
EXEC060	Executes the Application Definition Copy program.
EXEC062	Executes the Application Change Audit Inquiry program.
EXEC063	Executes the Transaction Change Audit Inquiry program.
EXEC064	Executes the Code Table Change Audit Inquiry program.
EXEC065	Executes the Object Insertion program.
EXEC066	Executes the Application Change Audit Maintenance program.
EXEC067	Executes the Transaction Change Audit Maintenance program.
EXEC068	Executes the Code Table Change Audit Maintenance program.
EXEC069	Executes the Error Message Change Audit Inquiry program
EXEC070	Executes the System Configuration Change Audit Inquiry program
EXEC071	Executes the Global Parameter Change Audit Inquiry program
EXEC072	Executes the Separator Change Audit Inquiry program
EXEC073	Executes the Security Change Audit Inquiry program
EXEC076	Executes the Code/Data/Validation Table Copy program.
EXEC080	Executes the Transaction Map Copy program.
EXEC082	Executes the Mapping Validation Report program.
EXEC087	Executes the Copy Partner and Partner Cross Reference program.
EXEC087U	Executes the Unload Partner and Partner Cross Reference program.
EXEC088	Executes the Version Comparison and Conversion program.
EXEC089	Executes the Transaction/Application Resynch program.
EXEC090	Executes the Application Renumber program.
EXEC091	Executes the Mapping Cross Reference Report program.
EXEC092	Executes the Partner Change Audit Inquiry program.
EXEC093	Executes the Partner Change Audit Maintenance program.
EXEC095	Executes the Data Router program for EDI variable format data.
EXEC095A	Executes the Data Router program for EDI fixed format data.
EXEC095B	Executes the Data Router program for application data.
EXEC100	Executes the Security Change Audit Maintenance program
EXEC101	Executes the Outbound Application Databank Maintenance program.
EXEC102	Executes the System Configuration Change Audit Maintenance program

EXEC103	Executes the Global Parameter Change Audit Maintenance program
EXEC104	Executes the Separator Change Audit Maintenance program
EXEC105	Executes the Error Message Change Audit Maintenance program
EXEC110	Executes a sort of generated acknowledgments.
EXEC201	Executes the Outbound EDI Databank Maintenance program.
EXEC205	Executes the Outbound EDI Databank Extract program.
EXEC301	Executes the Inbound EDI Databank Maintenance program.
EXEC401	Executes the Inbound Application Databank Maintenance program.
EXEC405	Executes the Inbound Application Databank Extract program.
EXEC500	Executes the Databank Change Audit Inquiry program.
EXEC502	Executes the Databank Change Audit Maintenance program.
EXEC510	Executes the Acknowledgment Reconciliation Monitor program.
EXEC520	Executes the Transaction Queue Initialize program.
EXEC550	Executes the EDI Databank Inquiry program.
EXEC551	Executes the Application Databank Inquiry program.
EXEC555	Executes the Databank Archive report.
EXEC800	Executes the ORDERNET Response Processor program.
EXEC800I	Executes the international ORDERNET Response Processor program.
EXEC805	Executes the GEIS Response Processor program.
EXEC810	Executes the IBM/Advantis Response Processor program.
EXEC825	Executes the Universal Response Processor program.
EXEC850	Executes the Network Reconciliation program.
EXEC860	Executes the Network Reconciliation Maintenance program.
EXEC930	Executes the Separator program.
EXECG100	Executes the Application Definition Maintenance program.
EXECG110	Executes the Cobol Copybook Generator program.
EXECLOAD	Executes copies of sequential unload files to the CICS region unload files.
EXECMAPU	Executes a combined unload for application transaction map and code tables.
INBOUND	Executes the inbound processing flow.
OUTBOUND	Executes the outbound processing flow.
UNLDJCL	Unloads JCL by member from EDIRJCL file.

Partner Subsystem Trading Mode Migration

CNDTR	Migrate all Data Translation tables from Partner/Qualifier mode to Relationship mode.
CNDTRI	Incrementally migrate Data Translation tables from Partner/Qualifier mode to Relationship mode.
CNDTRN	Defines empty Relationship Data Translation tables VSAM files to receive incremental migration.
CNREL	Migrates the entire Partner Profile and Control Number files from Partner/Qualifier mode to Relationship mode.
CNRELI	Incrementally migrates the Partner Profile and Control Number files from Partner/Qualifier mode to Relationship mode.
CNRELN	Defines empty Relationship Partner Profile and Control Number VSAM files to receive incremental migration.
DELPQ	Cleans up after the migration from Partner/Qualifier mode to Relationship mode is complete.

Batch Load Library

Conversion Programs

CNVAPP62	Converts the Release 6.1 Application file to the Release 6.2 structure.
CNVAPP64	Converts the Application file to the Release 6.4 structure.
CNVCODE62	Converts the Release 6.1 Code files to the Release 6.2 structure.
CNVCODE64	Converts the Code files to the Release 6.4 structure.
CNVCFG64	Converts the System Configuration file to the Release 6.4 structure.
CNVMSG64	Converts the Error Message file to the Release 6.4 structure.
CNVPR62	Converts the Release 6.1 Partner Relationship file to the Release 6.2 structure.
CNVPR64	Converts the Release 6.1 Partner file to the Release 6.2 structure.
CNVTR62	Converts the Release 6.1 Transaction file to the Release 6.2 structure.
CNVTR64	Converts the Transaction file to the Release 6.4 structure.
CNVXRF62	Converts the Release 6.1 Cross Reference file to the Release 6.2 structure.
EBDICTACT	Converts the Release 6.0 Standard Activity file to the Release 6.1 structure.
EBDICTASC	Converts the Release 6.0 Standard Association file to the Release 6.1 structure.
EBDICTATL	Converts the Release 6.0 Mapping Application file to the Release 6.1 structure.
EBDICTCDE	Converts the Release 6.0 Standard Code file to the Release 6.1 structure.
EBDICTCDF	Converts the Release 6.0 Mapping Code file to the Release 6.1 structure.
EBDICTCFG	Converts the Release 6.0 System Configuration file to the Release 6.1 structure.
EBDICTDIC	Converts the Release 6.0 Standard Dictionary file to the Release 6.1 structure.
EBDICTELD	Converts the Release 6.0 Standard Element Description file to the Release 6.1 structure.
EBDICTELE	Converts the Release 6.0 Standard Element file to the Release 6.1 structure.
EBDICTIEA	Converts the inbound Release 6.0 EDI Databank Directory file to the Release 6.1 structure.
EBDICTIOEA	Converts the outbound Release 6.0 EDI Databank Directory file to the Release 6.1 structure.
EBDICTPRT	Converts the Release 6.0 Partner Profile and Control Numbers files to the Release 6.1 structure.
EBDICTSEG	Converts the Release 6.0 Standard Segment file to the Release 6.1 structure.

EBDICS GD	Converts the Release 6.0 Standard Segment Description file to the Release 6.1 structure.
EBDICTHD	Converts the Release 6.0 Mapping Transaction files to the Release 6.1 structure.
EBDICTRN	Converts the Release 6.0 Standard Transaction file to the Release 6.1 structure.
EBDICVER	Converts the Release 6.0 Standard Version file to the Release 6.1 structure.
EBDIT10	Customizes the initialization of the System Conversion file.
EBDIT13	Updates the ERRCTL file with changes.
EDIH100	Converts the Partner Profile and Control Number files from Partner/Qualifier mode to Relationship mode.
EDIH200	Migrates the Code Definition and Code Data files from Partner/Qualifier mode to Relationship mode.

Translation Processing Programs

EBDI001	Inbound Editor
EBDI002	Outbound Editor
EBDI010	Unwrap 80 Byte EDI
EBDI010A	Unwrap 512 Byte EDI
EBDI011A	Envelope Generator – Acknowledgments
EBDI011M	Envelope Generator – Mapping
EBDI015	Inbound Splitter
EBDI016	Outbound Split
EBDI041	Inbound Mapper
EBDI042	Outbound Mapper
EBDI055	Generates 980 transaction for Motor Invoices (210 transaction set).
EBDI055A	Generates 980 transaction for Motor Invoices (210 transaction set).
EBDI065	Gentran Insert Object Program
EBDI095	Application/EDI Data Router
EBDI110	Sort Utility – Acknowledgment and Reformat

Reporting Programs

EBDI006A	Partner Profile Extract
EBDI006B	Partner Profile Print
EBDI007A	Partner Error Rejection Extract
EBDI007B	Partner Error Rejection Print
EBDI008	Partner File Inquiry
EBDI009	Security File Display Report
EBDI017	Extract Acknowledgment Records

EBDI018	Gentran Acknowledgment Report
EBDI019	EDI Data Report
EBDI035	Optimized Standards Table Report
EBDI036	Standards Print
EBDI037	Standards Change Audit Inquiry
EBDI052	Standard Sequence Mapping Report
EBDI053	Application Sequence Mapping Report
EBDI061	Gentran Mapping Summary Report
EBDI062	Application Change Audit Inquiry
EBDI063	Transaction Change Audit Inquiry
EBDI064	Code Table Change Audit Inquiry
EBDI069	Error Message Change Audit Inquiry
EBDI070	System Configuration Change Audit Inquiry
EBDI071	Global Parameter Change Audit Inquiry
EBDI072	Separator Change Audit Inquiry
EBDI073	Security Change Audit Inquiry
EBDI082	Mapping Validation Report
EBDI091	Mapping Cross Reference Report
EBDI092	Partner Change Audit Inquiry
EDID502	Databank Change Audit Report
EDID550	Databank Inquiry Report
EDID551	Application Databank Inquiry Report
EDID555	Databank Archive Report

Utilities Programs

EBDI005	Batch Partner Maintenance
EBDI030	Standards Selective Download
EBDI032	Copy Standards
EBDI033	Standards Change Audit Maintenance
EBDI038	Standards Maintenance Extract Utility
EBDI039	Standards Maintenance Merge Utility
EBDI060	Copy Application
EBDI066	Application Change Audit Maintenance
EBDI067	Transaction Change Audit Maintenance
EBDI068	Code Table Change Audit Maintenance
EBDI076	Transaction Table Copy Mapping Code and Data
EBDI080	Copy Translation

EBDI087	Partner Profile Copy
EBDI088	Gentran Version Comparison and Conversion Report
EBDI089	Gentran Batch Transaction Resynch
EBDI090	Gentran Batch Application Resequence
EBDI093	Partner Change Audit Maintenance
EBDI100	Security Change Audit Maintenance
EBDI102	System Configuration Change Audit Maintenance
EBDI103	Global Parameter Change Audit Maintenance
EBDI104	Separator Change Audit Maintenance
EBDI105	Error Message Change Audit Maintenance
EDIG100	Application Definition Maintenance
EDIG110	Cobol Copybook Generate from Application
EDIG300	Purges orphan EDI databank records
EDIRJCLR	JCL File Report program
EDIRJCLX	JCL File Loader program

Databank Maintenance Utility Programs

EDID101	Outbound Application Databank Maintenance
EDID201	Outbound EDI Databank Maintenance
EDID205	Outbound EDI Databank Extract
EDID301	Inbound EDI Databank Maintenance
EDID401	Inbound Application Databank Maintenance
EDID405	Inbound Application Databank Extract
EDID500	Databank Change Audit Reporting
EDID510	Acknowledgment Reconciliation Monitor
EDID520	Databank Transaction Queue Initialize
EDID800	COMMERCE:Network Reconciliation Preprocessor
EDID800I	COMMERCE:Network international Reconciliation Preprocessor
EDID805	GEIS Reconciliation Preprocessor
EDID810	IBM Reconciliation Preprocessor
EDID825	Universal Reconciliation Preprocessor
EDID850	Network Reconciliation Monitor
EDID860	Network Reconciliation Maintenance

Separator Programs

EBDI93X	XML Priority Lookup
EBDI930	Separator Driver
EBDI931	X12 Priority Lookup

EBDI932	EDIFACT Priority Lookup
EBDI933	TRADACOMS Priority Lookup
EBDI940	Monitor Input/Output
EBDI945	Router

Called Subroutine Programs

EBDI043	Inbound and Outbound Application Load
EBDI044	Translation Load – Inbound
EBDI045	Translation Load – Outbound
EBDI046	Mapping Conversion – From Date and Time to EDI
EBDI047	Mapping Conversion – From EDI to Date and Time
EBDI049	Numeric Mapping Conversion – Outbound
EBDI050	Numeric Inbound Computation Mapping Conversion
EBDI051	Numeric Outbound Computation Mapping Conversion
EBDI054	Application File I/O Subroutine
EBDI056	Envelope Generation Subroutine Outbound
EBDI056C	Envelope Generation Subroutine Outbound for concurrent processing
EBDI113	Internal Optimized Standards Loader – Editors
EBDI114	Internal Dynamic Code Validation – Editors
EDID102	Outbound Application Databank Interface
EDID102C	Outbound Application Databank Interface for concurrent processing
EDID103	Outbound Application Databank Update
EDID103C	Outbound Application Databank Update for concurrent processing
EDID202	Outbound EDI Databank Interface
EDID202C	Outbound EDI Databank Interface for concurrent processing
EDID302	Inbound EDI Databank Interface
EDID302C	Inbound EDI Databank Interface for concurrent processing
EDID303	Inbound EDI Databank Update
EDID303C	Inbound EDI Databank Update for concurrent processing
EDID402	Inbound Application Databank Interface
EDID402C	Inbound Application Databank Interface for concurrent processing
EDIECMR	Central Multiple Queue Read
EDIECMW	Central Multiple Queue Write
EDIELMT	Databank Online Log Initialize
EDILOG	Lookup, format and log messages.
EDIMAPQ	Pack Map name into 5 bytes.
EDIMOVE	Repetitive Move routine

EDIMVC	Variable length move routine
EDIWAIT	Subroutine to suspend a program
EDIXDEQ	Dequeue a specific resource.
EDIXENQ	Enqueue a specific resource.
GENDATE	YR2000 Century Subroutine and System Dates
GEXIT01	City and State Concatenation Mapping Exit Subroutine
GEXIT02	Zip Code Build Mapping Exit Subroutine
LOADCN1	Reset Hash and Accumulators Mapping Exit Subroutine
TIME6	Format 6 byte Time Mapping Exit Subroutine
XECB0008	Partner Lookup Mapping Exit Subroutine

C

System Image and Program Image Features

This appendix contains the following topics:

Topic	Page
Overview	C-2
System Image Feature.....	C-2
Program Image Feature.....	C-3
Scenario.....	C-3
Implementation	C-4
Replicating the System Image.....	C-4
Replicating the Program Image.....	C-5

Overview

Situations may occur when you need to run multiple copies of the Gentran:Basic online application at the same time within a specific CICS region. For instance:

- You need separate environments because you have set up your organization with multiple divisions that use the same application yet processes different sets of files.
- You are installing a new version of Gentran:Basic and need to keep a production version of your application active to perform daily business transactions.

The system image and program image features provide you the ability to keep your current Gentran:Basic online application active when such situations occur. This appendix provides guidelines for using these features.

System Image Feature

Each virtual copy (image) of the application executes the same programs, but has a unique set of transaction identifiers and its own set of files to process. Each image is differentiated by the first three characters of the Transaction ID used by a terminal operator for signing on to the application (such as, **EDI** or **MKT**).

Following is an illustration of a system image using **EDI** as the transaction identifier.

System Image Characters

```

EDIM000 _____ XXX 12/01/2005
                                     12:00:00

                                     G E N T R A N

SYSTEM IMAGE: EDI PROGRAM IMAGE: EDI DBK CONFIG:FFFF
PAUSE = EXIT PC KYBD

User ID: _____ Password:
New Password:

```

Program Image Feature

Program sets, known by the first three characters of the program names, comprise program images. Used in conjunction with system images, program images make it possible to run entirely different versions of an application at the same time within the same CICS.

Scenario

While upgrading from Gentran:Basic Release 6.3 to Gentran:Basic Release 6.4, you need to test the newer version before moving it into production. Therefore, you decide to create two separate systems. To achieve this, you will need to set up two different system and program images.

Solution

To differentiate the systems and access the applicable programs for each, you could use **E63** to represent Release 6.3. You then could use **E64** to represent Release 6.4.

When invoking the Release 6.3 online environment, you will enter the transaction ID **E63** to display the Gentran Logon screen. For Release 6.4, you will enter the transaction ID **E64**.

When accessing files applicable to Release 6.3, Gentran will look for file names starting with **E63** to access. For files applicable to Release 6.4, Gentran will look for file names starting with **E64**.

When retrieving programs applicable to Release 6.3, Gentran will look for program names starting with **E63** to execute. For programs applicable to Release 6.4, Gentran will look for program names starting with **E64**.

Implementation

In most cases, system image and program image are determined on the Pre-installation worksheet and implemented by the installer while performing the steps in Chapter 3 of this guide.

If you need to replicate or rename a system/program image of Gentran:Basic, please review the guidelines detailed in the following sections.

Replicating the System Image

The tasks involved in setting up your system image are defined below.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Select a new transaction ID (three characters only). The resource definition for this transaction ID should associate the ID with the main program (EDIX000). This new ID becomes the first three characters of the filenames used in the file definitions and the ddnames for CICS JCL. You should also change the transaction ID SIMD to have the system image as its first three characters. This transaction name must be specified in the System Configuration file (Record Type 2).

For example, if your system image is **EDI**, **SIM** becomes **EDI** and **SIMD** becomes **EDID**.

See Chapter 8 of this guide for information on editing the System Configuration file.

Note: We have built sample definitions for you to use. See "Establishing the Online Environment" in Chapter 3 of this guide.

- Add resource definitions for the CICS files to be used with the system image.

Note: We have built sample definitions for you to use. See "Establishing the Online Environment" in Chapter 3 of this guide.

- Add resource definitions for the CICS destinations to be used with the system image.

Note: We have built sample definitions for you to use. See "Establishing the Online Environment" in Chapter 3 of this guide.

- Recycle the CICS region.

Completed by: _____

Date: _____ **Time:** _____

Replicating the Program Image

The Program Image feature, when used in conjunction with the System Image feature, enables different versions of the Gentran:Basic online software to co-exist within one CICS region.

The tasks involved in setting up your program image are defined below.

Typically performed by: System Installer

Check the box next to each task as you complete it.

- Implement the System Image feature as described in the previous section.

Note: The system image and program image do not have to be identical. We recommend that they be the same, but it is not mandatory.

- Copy all CICS load modules into a temporary load library.

- The Configuration file will be updated with your designated System Image and Program Image when you execute the job to define the Base Gentran files **DEFBASE**, **DEFBASEM**, or **DEFBASER** in the installation process.

See Chapter 8 for information on editing the System Configuration file.

- Rename all of the load modules in the temporary load library.

- Change the first three characters of each module from PIM to the program image name.
For example, **PIMX000** becomes **EDIX000**, where **EDI** is the program image name. Perform this procedure for all load modules in the library.
- See member GENTRAN.V6X4.JCL (BSCNAME) for a sample IEBCOPY JCL.

- Copy the renamed load modules into the Gentran:Basic load library that is accessed by CICS.

- Add the new program and mapset definitions to be used with the program image.

Note: We have built sample definitions for you to use. See "Establishing the Online Environment" in Chapter 3 of this guide.

-
- Modify the resource definition of the new transaction (defined in the first task of the "System Image Feature" section in this appendix) to point to **PIMX000**, where **PIM** is the program image name. Also, modify the resource definition of the **SIMD** transaction, where **SIM** is the system image name, to point to program PIMX290.

For example, if your program image is **EDI**, program **PIMX000** becomes **EDIX000**.

Note: We have built sample definitions for you to use. See "Establishing the Online Environment" in Chapter 3 of this guide.

- Recycle the CICS region.

Gentran:Basic Files

Data Set Naming Conventions

The following table describes data set naming conventions.

Data Set	Format
Permanent VSAM files	GENTRAN.V6X4.VSAM.?????.????? <i>Where:</i> ????? = subsystem-specific
Initial loading sequential files	GENTRAN.V6X4.SEQ.?????.????? <i>Where:</i> ????? = subsystem-specific Note: Most of these files can be deleted after installation and conversion are complete. The sequential databank archive files also have names in this format. Do not delete the archive files at the end of the installation. These files have names using the following format: GENTRAN.V6X4.SEQ.EDI.EDI???R <i>Where:</i> ??? = the 3-character abbreviation for the particular databank
Program output sequential files	GENTRAN.V6X4.PGMxxx.????? <i>Where:</i> xxx = program number ????? = function-specific; describes the content
Batch executable load modules	GENTRAN.V6X4.BATCH.LOAD
CICS executable load modules	GENTRAN.V6X4.CICS.LOAD

Production Data Set Names for Gentran:Basic for zSeries Release 6.4

User Security Facility

This appendix contains the following topics:

Topic	Page
Overview.....	E-2
Entry Gateway	E-4
Security Exit.....	E-8

Overview

Normally you would logon to the Gentran:Basic online system using one of two methods:

- You would type the three-character system image of the Gentran:Basic online system that you wish to logon to on a blank CICS screen and press Enter to display the Gentran Logon screen (EDIM000).
- You would start a CICS transaction from your user menu using the three-character system image of the Gentran:Basic online system that you wish to logon to as the Transaction ID, which results in the Gentran Logon screen (EDIM000) being displayed.

Both methods are essentially the same, you start the Transaction ID associated with the Gentran:Basic online system that you wish to logon to. The only difference is that the first is manual and the second is automated.

Both of these methods use the Gentran:Basic security system to limit access through the use of User IDs and Passwords. You type your Gentran User ID and Password at the screen prompts on the Gentran Logon screen (EDIM000) and press Enter. After they are validated, the Gentran Main Menu screen (EDIM001) is displayed.

There are however two restrictions that you may encounter when using either of these methods:

- If you are already securely logged onto your CICS application and you require no further authorization to access Gentran, you must still enter your Gentran User ID and Password on the Gentran Logon screen (EDIM000) and have them validated before you are allowed to proceed.
- Your password security requirements may be more stringent than the Gentran:Basic security system supports. The only requirements that are enforced for passwords is that they be alphanumeric and between four to eight characters in length. These may not be sufficient to meet your more demanding requirements.

That's where the User Security Facility can help you. It can enable you to access the Gentran:Basic online system while bypassing the display of the Gentran Logon screen. It can also allow you to control access to the Gentran:Basic online system using your on-site security system to supplement and enhance the Gentran:Basic security system.

The User Security Facility is comprised of two components from which you can choose:

- **Entry Gateway:** With this method you transfer control to the Gentran Logon program (EDIX000) from your user application and pass it the User ID to logon with.
- **Security Exit:** With this method you create your own exit program that the Gentran Logon program (EDIX000) accesses to obtain the User ID to logon with.

With both of these components the specified User ID is validated by the Gentran Logon program (EDIX000) using the Gentran:Basic security system without displaying the Gentran Logon screen (EDIM000).

Note that both components only require that the User ID be provided. The Password associated with the User ID is not specified. This allows your on-site security system to validate and enforce your unique password security requirements before logging on to the Gentran:Basic online system.

This documentation will further describe the specific details of both of these components and discuss how to implement them within your Gentran CICS environment to meet your accessibility and/or security needs.

Entry Gateway

With this method you transfer control to the Gentran Logon program (EDIX000) while passing the User ID that you wish to use to logon to the Gentran:Basic online system. The Gentran Logon program then validates that the User ID is defined in the Gentran:Basic security system. If it is valid, the display of the Gentran Logon screen (EDIM000) is bypassed and the Gentran Main Menu screen (EDIM001) is displayed.

Note that the Password associated with the User ID is not specified nor is it required. This allows your on-site security system to validate and enforce your unique password security requirements before using the Entry Gateway to logon to the Gentran:Basic online system.

However using an Entry Gateway does not eliminate the requirement to define User IDs and their associated Passwords in the Gentran:Basic security system. This insures that each user is uniquely identified so that changes made by the user can be properly tracked.

The User ID is passed from the Entry Gateway in a CICS communication area that is made available to the invoked Gentran Logon program (EDIX000). This communication area also contains other fields including a few important options that you can use to control how the Gentran Logon program (EDIX000) interacts with your Entry Gateway. Later in this section a layout of the communication area is provided with descriptions of the fields it contains and how to use them.

A sample Entry Gateway program named GENBYPAS is provided in the UTILITY.SOURCE library delivered with the product. It demonstrates how to build the communication area, how to transfer control to the Gentran Logon program (EDIX000), and how to evaluate the return from the Gentran:Basic online system. A CICS resource definition for this sample program is provided in the JCL member BSCRDOPM. If you wish to use this sample program, uncomment its definition and install it in your CICS environment.

A sample Transaction ID (SIMC) that can be used to test the GENBYPAS program is provided in the JCL member BSCRDOT. If you wish to use this sample transaction ID, uncomment its definition and install it in your CICS environment.

There are two methods that you can use to implement the Entry Gateway.

- You can customize the GENBYPAS sample program and associate it with the SIMC transaction ID or a transaction ID of your choice and then start this transaction ID from your user menu.
- You can incorporate the code from the GENBYPAS sample program into your user application program associated with your user menu and transfer control to the Gentran Logon program (EDIX000) directly from your user application program.

Communication Area

```

*-----*
* COMMUNICATION AREA TO BE PASSED TO EDIX000. *

```

Fields

WS-USER-START

This 9-character alpha field must always contain a constant of USERSTART. It serves as the signal to the Gentran Logon program (EDIX000) that an Entry Gateway has invoked it.

WS-USER-EDE-TRAN

This 4-character alphanumeric field must contain the transaction ID that you use to invoke the Gentran:Basic online system that you wish to logon to. It should be the three-character system image suffixed with a single space.

WS-USER-SYSIMAGE

This 3-character alphanumeric field must contain the three-character system image of the Gentran:Basic online system that you wish to logon to. This must always be the same as the first three characters of the WS-USER-EDE-TRAN field.

WS-USER-ID

This 8-character alphanumeric field must contain the User ID that you wish to use to logon to the Gentran:Basic online system.

WS-USER-RETURN-TRAN

This 4-character alphanumeric field must contain the transaction ID associated with your Entry Gateway. If you are using the sample transaction ID that we provide, this field will contain SIMC where SIM is your three-character system image. When you exit from the Gentran:Basic online system, it will return to this transaction ID.

WS-USER-RETURN-PROGRAM

This 8-character alphanumeric field must contain the program name of your Entry Gateway. If you are using the sample Entry Gateway program that we provide, this field will contain GENBYPAS. When you exit from the Gentran:Basic online system, it will return to this program.

WS-USER-RETURN-AREA

This 101-character alphanumeric field will be returned to your Entry Gateway when exiting the Gentran:Basic online system. It contains the following three fields.

WS-USER-RETURN-DATA

This 50-character alphanumeric field can be used to pass data to the Gentran:Basic online system that will be returned to your Entry Gateway when exiting the Gentran:Basic online system. You can then evaluate this data to determine what processing is required.

WS-USER-RETURN-OPTION

This 1-character alpha field can be used to control what the Gentran Logon program (EDIX000) will do if the User ID fails validation in the Gentran:Basic security system. Normally when validation fails, the Gentran Logon screen (EDIM000) is displayed with an error message and the user is given the opportunity to manually enter their User ID and Password to obtain access to the Gentran:Basic online system. However specifying a "Y" in this field will result in the Gentran Logon program (EDIX000) returning to your Entry Gateway without displaying the Gentran Logon screen (EDIM000) and with a value of "E" in this field. You can then evaluate this field and take appropriate action.

The Gentran Logon program (EDIX000) will also return to your Entry Gateway with a value of "E" in this field if you specified a jump code in the WS-USER-JUMP-CODE field and the User ID is not authorized to access it.

WS-USER-RETURN-MESSAGE

This 50-character alphanumeric field will contain a message returned to your Entry Gateway when the WS-USER-RETURN-OPTION field contains an "E". There are two possible messages that you can evaluate to help you determine why the User ID validation failed.

SECURITY ID NOT IN GENTRAN

The User ID is not defined in the Gentran:Basic security system.

INVALID OPTION - USER LACKS AUTHORITY

The User ID is valid however it is not authorized to access the screen specified with a jump code in the WS-USER-JUMP-CODE field.

WS-USER-JUMP-CODE

Normally the Gentran Main Menu screen (EDIM001) is displayed after the User ID is successfully validated. If you would rather go directly to another screen within the Gentran:Basic online system, specify the numeric jump code of the screen in this 10-character alphanumeric field and it will be displayed instead.

WS-USER-MENU-RETURN-SW

This 1-character alpha field works in conjunction with the WS-USER-JUMP CODE field. You can specify a "Y" in this field to instruct Gentran to skip displaying the Gentran Main Menu screen (EDIM001) and instead return directly to your Entry Gateway when exiting the Gentran:Basic online system.

Other Fields

```
*-----*
*   OTHER FIELDS REQUIRED TO TRANSFER CONTROL TO EDIX000.   *
*-----*
01  WS-COMMON-LENGTH          PIC 9(04) VALUE 6228 COMP.
01  WS-GENTRAN-MAIN-PGM      PIC X(08) VALUE 'PIMX000 '.
```

WS-COMMON-LENGTH

This 2-character binary field represents the length of the communication area to be passed to the Gentran Logon screen (EDIX000) by the transfer command. It must be a constant 6228, which is the total size of all the fields in the communication area.

WS-GENTRAN-MAIN-PGM

This 8-character alphanumeric field is the name of the Gentran Logon program that your Entry Gateway will transfer to. It must be the value PIMX000 where PIM is your three-character program image.

Security Exit

With this method the Gentran Logon program (EDIX000) transfers control to your Security Exit so that you can obtain the User ID that you wish to use to logon to the Gentran:Basic online system. The Security Exit then returns the User ID to the Gentran Logon program and it validates that the User ID is defined in the Gentran:Basic security system. If it is valid, the display of the Gentran Logon screen (EDIM000) is bypassed and the Gentran Main Menu screen (EDIM001) is displayed. If the validation fails, the Gentran Logon screen (EDIM000) is displayed with an error message and the user is given the opportunity to manually enter their User ID and Password to obtain access to the Gentran:Basic online system.

Note that the Password associated with the User ID is not specified nor is it required. This allows your on-site security system to validate and enforce your unique password security requirements before using the Entry Gateway to logon to the Gentran:Basic online system.

However using a Security Exit does not eliminate the requirement to define User IDs and their associated Passwords in the Gentran:Basic security system. This insures that each user is uniquely identified so that changes made by the user can be properly tracked.

The User ID is returned from the Security Exit in a CICS communication area to the Gentran Logon program (EDIX000). This communication area also contains a return code field that can be used to indicate the results of obtaining the User ID. Later in this section a layout of the communication area is provided with descriptions of the fields it contains and how to use them.

A sample Security Exit program named EDIXSEC is provided in the UTILITY.SOURCE library delivered with the product. It demonstrates how to obtain a User ID and return it to the Gentran Logon program (EDIX000). A CICS resource definition for this sample program is provided in the JCL member BSCRDOPM. If you wish to use this sample program, uncomment its definition and install it in your CICS environment.

To implement the Security Exit program you can customize the EDIXSEC sample program and then specify its name in the Security Exit Program field as shown on the sample Configuration Maintenance screen that follows.

```

EDIM231 _____ CONFIGURATION MAINTENANCE      XXX      12/01/2005
                                                    12:00:00

On-Line Options - Record Type 0   Panel 1 of 3

Program Image.....: EDI_____ Any 3 Digits/Characters
Security Password Min Length...: 04_____ Valid Values - 01 To 08
Security Password Suppress.....: Y_____ Y=Yes           N=No
Security Exit Program.....: EDIXSEC___
User Jump Code Table.....: EDIJUMP___
Jump Code Display .....: 1_____ 1=Numeric           2=Alphabetic
Save Last Key Used.....: 0_____ 0=Save             1=Not Save
Disable Synchpoint.(VSE).....: 0_____ 0=No              1=Yes
Year 2000 Value.....: 50_____ DEFAULT = 50
Language Code.....: EN_____ Default = EN
Log Max Search.....: 3000_____ 4 digits

Last Update Date: 00/00/00   Time: 00:00:00   User: SCI

Enter PF1=Help           PF3=Exit PF4=Dir           PF5=More Opts  PF6=Nxt Cnfg
                          PF10=Updt

```

You then invoke the Gentran:Basic online system as you normally would either by manually typing the transaction ID associated with the Gentran Logon program (EDIX000) on a blank CICS screen or by selecting it from your user menu.

Communication Area

```

*-----*
* COMMUNICATION AREA TO BE RETURNED TO EDIX000. *
*-----*
01 DFHCOMMAREA.
   05 WS-USER-ID           PIC X(08).
   05 WS-RETURN-CODE      PIC X(02).

```

Fields

WS-USER-ID

This 8-character alphanumeric field must contain the User ID that you wish to use to logon to the Gentran:Basic online system.

WS-RETURN-CODE

This 2-character numeric field contains a return code indicating the results of the execution of the Security Exit. Valid return codes are:

00	Successful completion, User ID was obtained and returned
04	Unsuccessful completion, a User ID could not be obtained
16	Error occurred
