

What's New in IBM Sterling Gentran:Director Release 5.5

Rebranding

The 5.5 release of IBM® Sterling Gentran:Director® is a rebranding release to change names, logos, and other associated items as a result of the IBM acquisition of Sterling Commerce. The product has been renamed from "Gentran:Director®" to "IBM® Sterling Gentran:Director®".

Operating System Support

Sterling Gentran:Director now supports Microsoft Windows 7.

Licensing Information

You no longer need to enter a product key during the installation of this product.

Upgrade Impacts

The following features are not supported in this release:

- Asynchronous communications
- Bisynchronous communications
- TCP/IP communications

The supported communication options available in Sterling Gentran:Director 5.5 include FTP and B2B. It is recommended that all Gentran:Director Profiles that use the unsupported communication protocols be changed on your current Gentran:Director system prior to upgrading to Sterling Gentran:Director 5.5.

The default installation path is now C:\DirectorConnection.

There are new screens for Profile Setup and Commerce:Exchange configuration.

The Director Executive icon now appears as an IBM® logo in the system tray.
