

# What's New in IBM Sterling Gentran:Server for iSeries Release 3.6

## What's New

---

---

**Rebranding** The 3.6 release is a rebranding release to change names, logos, and other associated items as a result of the IBM acquisition of Sterling Commerce. The product has been renamed from "Gentran:Server® for iSeries" to "IBM® Sterling Gentran:Server® for iSeries®".

---

**Licensing Information** The product keys are no longer required and the add-on products are now controlled through new Global Parameter flags (using Option 11 System Administration Menu from GENMAIN).

---

**Upgrade Impacts** The following feature is not supported in this release:

- ZModem communications

Tools and Tutorial Data libraries are no longer available for download during the installation process. These can be downloaded using the DWNSAMP and DWNTOOL commands. Standards are no longer downloaded during installation, and should be downloaded after the install has completed using the DWNSTD command.
