IBM Sterling Gentran Server for iSeries
How to Use Jump Code to access Commands, Menu Options Quickly

Date revised: May 2016

TABLE OF CONTENTS

Purpose - The Jump Code Feature is a quick access method for Navigating to online programs, menus, and commands.

You can use either the **J** command or the **JUMP** command with a quick name value.

Use the predefined quick names or the three-digit number representing an online program with the prefix 'EDIX'.

For example, if you wish to access the Work with Partners panel (EDIX005-FMT01), type one of the following commands on the command line and press the ENTER key.
J PAR
J 005
JUMP PAR

Jump Code	To get to…	Jump Code	To get to…
M	Gentran Main Menu	ENV	Work with Environment Control
PAR	Work with Partners	AUD	Audit Menu
PG	Work with Partner Groups	SA	Search Audit Utility
PT	Work with Partner Transactions	AI	Work with Audit Interchange
