Monitor Resource Change Events

Sterling Integrator enables you to monitor changes to many of the Sterling Integrator resources. Events are generated each time a resource is modified and the events are stored in the ADMIN_AUDIT table. If you need to find out who modified a resource, or what time the resources was modified, you can generate an Admin Audit Report (refer to Admin Audit Report).

The following Sterling Integrator resources events are currently being monitored:

- Business Process
- Envelope
- Contract
- Group
- Map
- Map Extended rule object
- Mailbox
- Mailbox routing rule
- Permission
- Schedule
- Service/adapter
- User account

Events are captured every time a resource is:

- Created
- Updated
- Deleted

Admin Audit Report Example

The following is an example of an Admin Audit report:

Admin-Audit Report

Created On: 10/02/2006 11:06:33 AM
Created By: admin
Report By: Resource Type
Report Config: BP
Filters: Time From: 09/29/2006 10:53:15 PM
Time To: 10/02/2006 10:53:15 AM

Resource Type

Time	Principal	Action Type	Action Value	Resource Name
Business Process				
10/02/2006 10:45:21 AM	admin	Create:Version	1:See audit	TestBP
10/02/2006 10:47:37 AM	admin	Create:Version	1:Report Schedule BP	AdminAuditByObjectType_ScheduleBP
Schedule				
10/02/2006 10:47:42 AM		Create:Name	AdminAuditByObjectType_ScheduleBP	AdminAuditByObjectType_ScheduleBP
