
Translation Status Report

The Translation service produces a Translation Status report. The report contains information about the translation of the document and any compliance errors. Errors from the input side of the map are listed under the Input tab. Errors from the output side of the map are listed under the Output tab.

Compliance errors can also be specified with the extended rule *error*.

The following table lists compliance error codes (general, SQL, EDI, and XML messages) used in the Translation Status report:
