Setup Checklist - Advanced File Transfer

This document contains basic information required for setting up Advanced File Transfer (AFT). You need a basic understanding of the terms and concepts related to AFT to use it.

For details about the information outlined here, refer to *AFT Overview*.

Note: A separate license is required to use the Advanced File Transfer Management menu and the AFT functionality.

AFT Terminology

Within Sterling B2B Integrator, the Advanced File Transfer menu sets up and monitors the routing capability referred to as the *router*.

Routing enables a producer of data to direct a file to a particular consumer of that data. The producer and consumer are *AFT partners* of the router. Partners can be external, such as customers or suppliers, or internal, such as business units of the entity hosting the router

Administrators organize partners into *AFT communities* for ease of administration and to tailor the set of protocol choices that different AFT partners are offered. Each AFT partner belongs to only one AFT community. You cannot alter an AFT partner's membership in an AFT community, except by deleting that AFT partner and recreating that partner in a different AFT community.

The following table contains definitions of the AFT components:

Term	Definition
AFT community	Organization of protocols and options that are available to member AFT partners.
AFT partner	Individual profiles that belong to a community, with selected options within the structure of the community.
Consumer	Receives the data in a file transfer.
Consumer identification policy	Method the producer uses to identify the consumer to receive the file transfer. An example is 'use filename', where the consumer is identified by the name of the transferred file.
Endpoint	Either the initiating or the listening server in a file transfer.
Initiator	AFT partner who takes the first action in a file transfer, initiating activity.
Listener	AFT partner who waits for someone else to start a connection for a file transfer, listening for activity.
Producer	Supplies the data in a file transfer.
Router	Within Sterling B2B Integrator, the AFT routing capability.
Route record	Contains details about a route, including the endpoint, consumer, producer, start and end times, any errors that occurred, and other details.

Term	Definition
Data flow	Aggregates, in a single page, all the documents that are related, and annotates them with correlation entries and file transfer events.
Workflow	Contains a trace of the services that were invoked in the sequence defined by the business process, and the status of each service.
Communication session	Contains the authentication, authorization, file transfer, or non-file transfer records, for all communication activities that adapters participate in, whether or not the data actually gets transferred.

Implementation Checklist

The Implementation checklist lists the steps of the Advanced File Transfer (AFT) setup process.

Details for each of the steps outlined here are in the *AFT Overview*. You may want to make a copy of this checklist and use it to record any notes you may have.

Step	Task	Notes
1	Plan your AFT communities and AFT partners.	
2	Edit your mailbox.properties file.	
3	Enable a Mailbox schedule.	
4	Prepare to use Sterling Connect:Direct® for file transfer, if applicable.	
5	Prepare PGP keys and certificates.	
6	Enable the Advanced File Transfer menu.	
7	Create AFT communities.	
8	Create AFT partners.	
9	Exchange keys and connection information with AFT partners.	
10	Transfer files using AFT.	

Plan AFT Communities and AFT Partners

AFT partners exchange files with partners in the same community or different AFT communities, depending on the constraints of their AFT community. You may need many AFT communities to support the file transfer mechanisms that are required. Each AFT partner must belong to an AFT community. Each AFT partner can only belong to one AFT community.

AFT communities are distinct and separate from the EDI-centric communities created using the Community Management menu. Because AFT partners must belong to an AFT community, create the AFT community first. The protocol selections made during the creation of the community determine the selections that display during the creation of the AFT partners in that AFT community.

Plan your AFT communities and AFT partners using the following worksheet:

Partners for AFT Community	Is Partner a Producer of Data?	Is Partner a Consumer of Data?	Does Partner Initiate Connections?	Does Partner Listen for Connections?	What Protocols Does Partner Use?	What Security Schemes Does Partner Use?

Notices

This information was developed for products and services offered in the U.S.A.

IBM® may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not grant you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing

IBM Corporation

North Castle Drive

Armonk, NY 10504-1785
