Quest Software, Inc.
Toad for IBM DB2

IBM
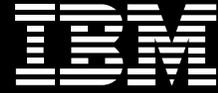

Solution Description

Toad for DB2 on Linux, Unix and Windows is a comprehensive database development and administration solution that enables daily tasks to be performed efficiently and accurately. As database development environments become more diverse, many developers, database administrators and business analysts with limited IBM DB2 experience are being asked to write applications on IBM DB2. This presents skills migration challenges that can lead to inefficient SQL code development, which is often the source of poorly performing applications.

The Toad for IBM DB2 solution is an intuitive tool that improves productivity and code quality. IBM DB2 developers of all skill levels now have a single toolkit for creating and debugging stored procedures, generating SQL and viewing and editing DDL. The solution simplifies script execution and automates basic object management, resulting in improved productivity and shortened development cycles.

Features & Benefits

- Flexibility to perform many development and administration tasks from a single tool
- A smooth workflow that allows users to easily move from one task to another
- Extensive reporting capabilities that produce quantifiable data and documentation
- Enhanced data security and reduced chance of user errors
- Simplified IBM DB2 object management
- Access to IBM DB2 expertise through various Toad user communities
- Streamlined SQL code development and deployment
- Improved SQL quality through automatic SQL optimization
- Catalog browsing and reporting at a glance

Value Proposition

The Toad for IBM DB2 solution simplifies database development and improves productivity by providing an intuitive graphical user interface. This interface allows for greater efficiency and accuracy when performing daily tasks such as writing, debugging and tuning code. The solution's single console for working with SQL, stored procedures, and Object DDL shortens development cycles, resulting in a reduced total cost of ownership.

Company Description

Quest Software, Inc., a leading enterprise systems management vendor, delivers innovative products that help organizations get more performance and productivity from their applications, databases, Windows infrastructure and virtual environments. Quest also provides customers with client management through its ScriptLogic subsidiary and server virtualization management through its Vizioncore subsidiary. Through a deep expertise in IT operations and a continued focus on what works best, Quest helps more than 100,000 customers worldwide meet higher expectations for enterprise IT. Quest Software can be found in offices around the globe and at www.quest.com
