

Revelation Software

OpenInsight for U2

Solution Description

OpenInsight for U2 is a repository-based applications development environment that enables development teams to work collaboratively to design, develop and deploy high-performance business solutions. OpenInsight's complete tool set, advanced BASIC+ scripting language, and powerful client/server development, combine to deliver a complete environment for successfully deploying network applications.

Features & Benefits

- OpenInsight's complete tool set includes a Forms Designer, Editor/Debugger, UI Workspace, XML Workspace and more
- Simple to create reports: In addition to regular TCL commands, three other reporting tools, all of which can print to any printer on the network are included. Reports can be previewed on the screen, saved as PDF, HTML, RTF, CSV, or text, or sent directly to a printer
- OpenInsight is delivered with a flexible MultiValued, variable length, filing system, or has the ability to use SQL Server, Oracle, Lotus Notes, Universe/UniData, or any ODBC compliant data back-end

Value Proposition

OpenInsight ensures the preservation of information systems and application investments by enabling companies to reuse, extend, enhance, leverage and protect their investments in skills and business applications. OpenInsight is one of the only database development and application environments that provides Windows, Linux and Java-based GUI tools to develop and deploy mission critical applications. OpenInsight offers scalability by allowing creation of an application that runs on a standalone PC, and is scaleable for thousands of users with no change to the application. Additionally, OpenInsight provides flexibility by allowing the support of both stored data and derived data. The net result is that developers can deliver applications to their customers and users that meet the needs of a dynamically changing business environment.

Company Description

Founded in 1982, Revelation Software delivers a suite of application development tools and companion services that take full advantage of leading network computing architectures, messaging, groupware, and client server platforms. Today, the company's flagship product OpenInsight is the only database development and application environment that provides both Windows, Linux and Java-based GUI tools to develop and deploy web-based and client server applications. OpenInsight supports native and relational XML, SQL, Lotus Notes and the leading legacy Multi-Value data sources such as ARev, Pick and IBM Universe. There are more than 1.6 million licensed users of Revelation products across 80,000 deployed sites worldwide. The company has offices in Westwood, New Jersey, as well as a European distributor in the United Kingdom, and an Asia Pacific subsidiary in Australia.

IBM Segment

- Data Management

Business Function

- Component-Based Applications Development

Target Industry

- Cross Industry
