SSP
SSP InsureJ

IBM

Solution Description

Both technically and functionally, SSP InsureJ represents a completely new offering in general insurance (property & casualty) solutions. Designed to improve operational efficiency, agility and reduce costs, SSP InsureJ is an administration system that consists of more than 30 independent Java Platform Enterprise Edition (JEE) open standard components. Its innovative JEE service oriented architecture ensures the application is function-rich, while its modular structure provides a flexible platform on which to consolidate all systems into one powerful, scalable application, either as a complete integrated solution or one component at a time.

Features & Benefits

- Automated administration frees up valuable time for key staff

- A fully flexible & scalable system that adapts to specific business requirements

- Flexible interface can be designed to meet specific user requirements

- Fully scalable by adding on more modules as required

- Future-proof, service-oriented architecture, enables easy upgrades

- Cross-sell more services by instantly spotting opportunities to offer additional services

Value Proposition

InsureJ is a completely new kind of customer-centric IT solution that presents a single view of each customer's information, resulting in a better understanding of the individual customer. Made up of 30 stand-alone scalable Java based applications, SSP InsureJ allows for the exact level of functionality that's right for a specific business. As business grows and expands, new modules can simply be added to meet the current requirements.
