

A Business Partner Solution for Cross Industry

Accelerating Application Development and Deployment

XAware, Inc.

XAware

Solution Description

The XAware solution accelerates application development and deployment by simplifying the complex task of building and maintaining access to and from multiple external data sources. It provides real-time, bi-directional data integration with a service-oriented flavor. XAware makes other tools and frameworks more productive by hiding data access complexity behind "XML views". XAware bridges the gap between business processes and IT. This XML-based bridge is the Business Services Layer which is comprised of logical assemblies of IT data services and conditional processing.

These business services can then be choreographed to provide new business processes and provide companies the agility to keep up with changing business models. XAware logically grouped catalogs of related and integrated business services that have been designed for verticals with complex data integration challenges (e.g., financial markets, insurance, healthcare and government entities).

Features & Benefits

- "Snaps" into any EAI platform, application server, reusing existing services and code
- Simplified handling of multiple, disparate, and structurally-rich data sources
- Built from the ground up for optimal delivery of services (not a repackaged legacy product)
- "Configure, not code" approach speeds development and delivery
- Fully leverages the power of XML and XML standards
- Powered by metadata
- Building Block approach enables flexibility, reuse and repurposing

Value Proposition

XAware plugs into the Eclipse development environment, today's application architecture and technology standards, and is readily deployable for key business issues in industries such as Financial Services, Government, and Healthcare. By leveraging a powerful XML-based Common Information Model (CIM) approach based on industry standards and predominant vendor transaction sets, our pre-configured services quickly deliver valuable capability in a fraction of the time required by other solutions.

Company Description

XAware is the first company to provide a comprehensive open source data integration solution for creating composite data services. XAware makes it possible to transform data, regardless of the source, into reusable services for real-time integration in service-oriented architecture (SOA), rich Internet applications (RIA), and software-as-a-service (SaaS) solutions. Companies worldwide rely on XAware for their composite data services needs. For more information please visit: www.xaware.com.
