

A Business Partner Solution for the Cross Industry

Database Archiving for ERP and Custom Applications

Dynamic Systems Solutions, Inc.

Silverlake Data Management

Solution Description

To properly handle customer inquiries and make accurate decisions, it is necessary for companies to have convenient and reliable access to archived data. The Silverlake Data Management solution allows access to data quickly, with no adverse impact on production processing. The solution provides application-independent access to archives, using standard query or building a separate environment just to inquire and report on the archived data.

The Silverlake Data Management solution includes IBM's robust archiving capabilities so that, based on its evolving business value, tiered storage strategies can be employed to manage application data. Current transactions remain in the high-performance OLTP environment. Reporting data, in history tables, can be maintained in mid-tier storage to preserve cost controls while continuing to achieve service requirements.

Features & Benefits

The solution aligns application data management with business objectives to optimize value. With implementation, companies are able to:

- Align application performance with business processes to consistently satisfy service levels and increase profitability
- Apply functional business policies to segregate inactive application data from current activity and safely move it to a secure archive
- Archive, manage and retain data at the business object level
- Respond quickly and accurately to audit and discovery requests with application-independent access to standalone archives

Value Proposition

The Silverlake Data Management Solution enables organizations to reduce costs and improve performance. Silverlake enables companies to efficiently and effectively respond to emergent, data-intensive business opportunities and meet service level agreements for data driven applications. Compliance with data privacy and data retention regulations is greatly improved, enabling companies to focus on growing the business and driving down total cost of ownership.

Company Description

DSS helps asset-intensive clients optimize ROI by utilizing Asset Lifecycle Management solutions. DSS's seasoned Consultants provide process optimization, IT strategy, implementation, upgrade and managed services to value-conscious clients worldwide. Since 1992, organizations in a diverse range of manufacturing, distribution, and service industries have relied upon DSS for its strategic technology and business consulting services.

IBM Segment

- Data Management

Business Function

- Data Archiving

Target Industry

- Cross Industry
