

A Business Partner Solution for the Cross Industry Sector

Migrating Content from IBM FileNet Panagon to the IBM FileNet P8 Environment

Datamatics Global Services Limited

IBM FileNet Panagon to IBM FileNet P8 Migration Tool

Technology Description

Datamatics' IBM FileNet Panagon to IBM FileNet P8 Migration Tool allows you to migrate content from an IBM FileNet Panagon Image Services and Content Services (IS/CS) environment to a FileNet P8 environment. The tool allows users to specify the properties, such as space requirements, library/object store name, document class, export ranges, database server, folder and document structure. It extracts content, metadata, security, etc. from the FileNet Panagon repository and imports it into the IBM FileNet Content Engine object store. The tool recreates the document classes, properties and folder structures identical to the FileNet Panagon environment. The tool migrates security and annotation from documents, document classes and folders in FileNet Panagon Image Services and Content Services to the FileNet P8 environment.

Apart from the migration facility, this tool also allows customers to map FileNet Panagon Image Services and Content Services to IBM FileNet Content Manager. The tool allows customers to specify the following FileNet Panagon Image Services / Content Services to FileNet Content Engine mappings:

- FileNet Panagon Image Services library / Content Services object store to FileNet Content Engine object store.
- FileNet Panagon Image Services doc class to FileNet Content Engine doc class.
- FileNet Panagon Image Services and Content Services property to FileNet Content Engine property.
- FileNet Panagon Image Services users / groups to FileNet Content Engine users/ groups.

This tool maintains an exhaustive log of the migration activity with roll back facility. It also facilitates multiple running instances with distinct select criteria and supports multiple file formats like tiff, pdf, office, MP3, wave, etc.

Features & Benefits

- Seamless migration of content, metadata and security settings from FileNet Panagon IS/CS environment to FileNet P8 environment.

IBM Segment

- Enterprise Content Management

Business Function

- Migration

Target Industry

- Cross Industry

- Highly configurable, hence reduces the time and effort for migration.
- End-to-End reconciliation - Auto logs migration activity.
- Enhanced throughput for faster migration.
- Recreates identical structure after migration which creates higher user acceptance and more efficient working.
- Optimal support of business processes.

Value Proposition

The IBM FileNet Panagon to IBM FileNet P8 Migration Tool offers flexibility and control in managing critical information and processes while migrating content from the FileNet Panagon IS/CS environment to the FileNet P8 environment. Our consultants help organizations create a complete roadmap for migration, as there are multiple considerations that need to be addressed before planning the migration.

The tool is highly configurable and facilitates users to define various properties for migration. The tool first extracts the existing structure from the FileNet Panagon repository and later bulk uploads the same in the FileNet P8 environment, therefore not impacting the existing production system, its content or its users during the migration process. The tool also maintains the security of the content and provides an audit trail of the conversion and the entire migration activity is auto logged. We can also assist organizations in creating an object store with IBM FileNet Enterprise Manager if they do not have the object store, ensuring successful migration to the FileNet P8 environment.

Company Description

Datamatics Global Services Ltd. (DGSL) is an IBM Software ValueNet Business Partner and has partnered closely with IBM as a Global Solution Provider for promoting and implementing IBM FileNet P8-based solutions worldwide. DGSL focuses on providing solutions and services over Document Management, Business Process Management, eMail Management, Records Management, Web Content Management, Imaging, Data Warehousing, Business Intelligence & Enterprise Portal Technologies based on IBM Information Management suite of products.
