

IBM HealthCheck Services

Feel confident about the health of your database

Your database system needs an annual checkup

You have a great staff, but once a year you need a specialist to make sure your database systems are operating at peak performance. IBM Data Server consultants come to you from the same team that developed and delivered your software – our knowledge is thorough. And, we spend 100% of our time with customers so you get the advantage of our many perspectives.

IBM HealthCheck

- Fast and insightful
- Ensures database health
- Prevents surprises
- Drives results

What is an IBM HealthCheck?

Feel confident knowing that your database systems are optimized for accelerated performance with an IBM HealthCheck for DB2® for LUW, DB2 for z/OS, Informix® and the U2 family.

From environment assessment to tuning recommendations, an IBM HealthCheck is a worry-free way to ensure the health of your database. With regular HealthChecks, your preventive cost is low and the skills brought to your business are exceptional.
