Information integration solutions: Professional services

Highlights

- *Take advantage of a wide range of services offerings designed to help you achieve success in the design, implementation and rollout of critical information integration projects*

- *Use services designed to provide repeatable processes and consistent approaches that can be applied to future initiatives for predictable results*

- *Leverage IBM methodologies, standard practices and experience, developed throughout thousands of successful engagements in a wide range of industries and government entities*

- *Fill the specific role required— project leadership, augmentation or support*

Unlock the value of enterprise data

Organizations face an information challenge. Where is it? How do I get it when I need it and in the form I need? What does it mean? What insight can I gain from it? The list goes on, and the challenges grow unceasingly if organizations cannot ensure they have access to dependable, consistent, timely and complete information.

IBM Information Integration Professional Services

To help you achieve success in meeting your business objectives through enterprise information integration solutions and to accelerate your solution design and implementation, IBM Information Integration Professional Services offers a broad range of planning, education, design engineering, implementation and support services. Whatever industry your company serves, our consultants can help you
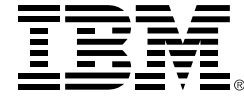

implement the right IBM Information Integration Solution.

Delivering knowledge, experience and resources

IBM comprehensive data integration solutions enable clients to successfully collect, validate, organize, administer and deliver information assets to help realize more value from their enterprise data, reduce costs and increase profitability. To date, IBM Information Integration Professional Services has completed more than 2,100 engagements worldwide in industries such as financial services, telecommunications, healthcare, manufacturing, consumer goods, retail, education and government.

The objective is to provide the most cost-effective and expedient means of achieving project goals through using the IBM® Information Server software platform, repeatable processes and consistent deliverables. To achieve these goals, IBM leverages standard methodologies, proven consulting expertise and experience refined throughout thousands of successful data integration engagements.

IBM®

Your independence is our greatest success

The single underlying theme for all of the service offerings is one fundamental belief: your independence is our greatest success. At IBM Information Integration Professional Services, we believe that nothing is more important than transferring our knowledge to your organization, providing you with long-term self-sufficiency through our mentored approach. Whether you need targeted services or end-to-end project consulting, IBM consulting services for Information Integration Solutions is ready to put its experience to work for you as an experienced partner. We can help you achieve your goals and help make the IBM Information Server platform shine in your environment.

Blueprint for success

The IBM Iterations® 2 Methodology is a framework for enterprise data integration projects. Its comprehensive, step-by-step approach leads a client's project team from initial planning and strategy to tactical implementation. An iterative model, the methodology is a set of project management practices and principles that allows organizations to build a scalable and extensible infrastructure foundation.

The methodology is not based on a particular set of enterprise data integration tools; it is vendor independent, enabling rapid design, development and deployment of any enterprise data integration infrastructure. Each iteration or phase consists of a complete project life cycle: investigate, design, deploy and operate.

Engage today

With a worldwide team of highly trained services professionals, IBM Information Integration Professional Services can help you build your solution with confidence while assuring that the business needs and expectations of your organization are met. These experts can assist your organization to:

- *Establish project goals, expectations and communication strategies*
- *Maximize the impact and efficiency of project outcome*
- *Increase return on investment*
- *Reduce project lead times, complexity and risk*
- *Reduce total cost of ownership*

Available for a specific phase of your project or an end-to-end implementation, IBM Information Integration Professional Services produces results fast and helps to put your project on the road to success.
