DB2 Information Integrator Services Overview

Customers today manage increasingly complex environments that span multiple relational and rich content data sources. New applications frequently require access to data from several of these disparate sources. Developing these applications requires the customer staff to expend valuable time in researching and becoming proficient in data access methods for each source.

IBM DB2 Information Integrator has been designed to provide a single source for data access, greatly reducing the time requirements for developing applications that may require data from multiple sources. Customers can reap significant benefit through the reduced complexity required for the application development process. DB2 Information Integrator intelligently gathers the required data from the relevant sources, and returns the results to the application as if they were stored directly within DB2 Information Integrator.

IBM Software Services for DB2 Information Management excels at enterprise wide, end-to-end solutions, with an emphasis on the customer's long-term success. They focus on how to use IBM DB2 Information Integrator technology to create competitive market opportunities, while meeting performance demands and preserving valuable IT investments. IBM Global Services - Integrated Technology Services has extensive experience in developing, deploying and supporting database replication solutions.

Our consultants provide unparalleled data modeling expertise and general support, including the installation, configuration, tuning, and maintenance of all IBM DB2 Information Integrator products.

IBM Software Services for DB2 Information Management and IBM Global Services work closely to provide you with expertise in all aspects of your information management solution; whether you're looking for deep product expertise, business consulting, or project management, you can rely on experienced consulting services from IBM.

DB2 Information Integrator Software Service Summary

Offering	Identifier	Description
Information Integrator		
IBM Design and Planning Services for DB2 Information Integrator	IIDES01	Understand the requirements for data integration and design a DB2 Information Integrator solution that includes a clear representation of the federated data.
IBM Implementation Services for DB2 Information Integrator	6942-99J	This service includes planning, design, installation / migration, configuration, and integration for DB2 Information Integrator on AIX, Windows, and OS/390 platforms for IBM and non-IBM products. It allows customers to replicate, join, and integrate multiple data sources to create more efficient ways to access, store, and mine information across the enterprise.
IBM Fast Start Services for DB2 Information Integrator	IIINS01	Get a quick start with newly purchased IBM DB2 Information Integrator technology.
IBM Performance Tuning Services for DB2 Information Integrator	IIPER01	Analyze DB2 Information Integrator performance, identifying bottlenecks and possible system optimizations
Information Integrator for Content		
Content Manager for Multiplatform Basic Installation & Configuration	CMINS01	Recommended services for DB2 Content Manager for Multiplatform installation and configuration (can include DB2 Information Integrator for Content).
Solution Integration	CMINT05	Provides deep product knowledge and skills for designing and implementing integrated solutions for all Content Manager products.
