Consulting Services

Boost your success

IBM Software Services for DB2 Information Management provides deep technical skills and experience, when required, for implementation of DB2 information management software. Consulting expertise spans business intelligence, enterprise content management, information integration, and database server technology on distributed, OS/390® and z/OS® platforms. Service offerings include design and implementation, product installation and configuration, capacity planning, system administration, performance tuning, upgrades and competitive migration. As an extension of the research & development and support teams, our consultants can help to insure full leverage of technology investments and fulfillment of business requirements.
