

InfoSphere Information Server Migration

Fully realize the benefits of your application

Highlights:

- A seamless migration from one ETL environment to another, including in-depth planning and testing
- Fully realize the benefits of your application on our new InfoSphere Information Server technology
- Migration plan tailored to your environment from an experienced consultant
- Guidance through standard practices and test procedures to safeguard production system
- Learn valuable skills and gain hands on experience

The InfoSphere Information Server assistance you need to successfully migrate existing applications developed with DataStage, Information Server, or other applications to the InfoSphere Information Server parallel framework.

Overview

The IBM InfoSphere Information Server leads the industry in performance and scalability for data integration. By leveraging the parallel platform, organizations are able to reduce processing windows and maximize their hardware investment. Through this offering, we expedite the transition moving your existing server jobs to the new paradigm. This will allow you to leverage your existing investment and will help you establish a standardized InfoSphere Information Server environment across your organization.

Migration assessment service

To complete a migration activity and to take full advantage of the new architecture available with the IBM InfoSphere Information Server product, a thorough understanding of the differences in jobs across the different versions of Data Stage, Information Server, as well as any other applications you may have is required. This migration assessment service will allow Information Management Software Services to quickly assess this information, which will drive the definition of the overall scope required to complete your migration initiative. Upon the conclusion of the assessment, you will have an understanding of what it will take to complete your migration, cost, as well as recommendations for next steps to take in order to execute your migration.

Migration implementation service

Upon completing the migration assessment, the next step is to execute the migration. There are two different approaches that can be taken to complete a migration implementation: accelerated or custom migration services.

Accelerated migration services

This reduced cost approach will require a 1 combination of both on and off-site work for Information Management Software Services resources. Once jobs have been selected for migration, Information Management Software Services professionals will arrive on-site to complete any remaining analysis and design work.

The jobs will then be sent off-site to be converted to the new parallel framework by Information Management Virtual Services resources. Unit testing will also be conducted off-site. Once complete, the jobs will be delivered back for you to complete any systems integration and user acceptance testing in preparation for production rollout. You as the client will then take the necessary steps to roll these jobs into a production environment. Information Management Software Services will provide support as required during the system integration, user acceptance, and production rollout of these jobs.

Custom migration services

The Information Management Services custom migration services are an IBM lead turn-key, complete migration of a customer's DataStage, Information Server, or other application server jobs to the parallel platform, including any re-architecture requirements. The execution of the offering includes all necessary testing and production rollout activities, and will leverage standard practices and advanced optimizations practices.

IBM looks forward to working with you on determining and executing upon an approach to your migration initiative.

Your independence is our greatest success

Nothing is more important than transferring IBM expert knowledge to your organization. This provides long-term self-sufficiency through a mentored approach.

Engage today

With a world-wide team of highly trained professionals, the IBM Information Management Software Services team can help build your solution with confidence while assuring that the business needs and expectations of your organization are met. Our experts are ready to assist your organization with:

- Establishing project goals and expectations
- Maximizing the return on your investment
- Reducing project delivery times, complexity and risk through the delivery of proven offerings
- Reducing total cost of ownership
- Information sharing through our mentoring approach

Available for any delivery approach, the IBM Information Management Software Services team will produce results quickly, and will help to put your project on the road to success.
