## The IBM - Isogon Software Asset Management Solution

*IBM Software et IBM System & Technology Groups*

## Why Software Asset Management?

### Université du Mainframe 2005

Companies can expect to achieve 30% savings in the first year and between 5-10% annually with an effective Software Asset Management program.

– Gartner

Customers who commit a minimum of 3% of their operating budgets to IT Asset Management programmes and tools can expect a 25% reduction in their TCO

– Gartner

Users spend \$7 in software for every \$1 in processor hardware.

- GIGA

Software budgets are increasing 13% faster than other budget areas

- IDC

- You may be paying too much for software
- You may be out of compliance
- Your vendor may know more about your deployment than you do
- You need to continually align your Software spend with your Business Priorities
- Your CEO & CFO are liable if you do not have effective control procedures (Sarbanes-Oxley Section 404)

**IBM Software et IBM System & Technology Groups**

What is Software Asset Management (SAM)?

# SAM is a Subset of IT Asset Management

IT Asset Management (ITAM)

Hardware

Software

Contracts

Software Asset Management

HW Cost Trends

SW Cost Trends

IBM Software et IBM System & Technology Groups

# Sustaining SAM Success

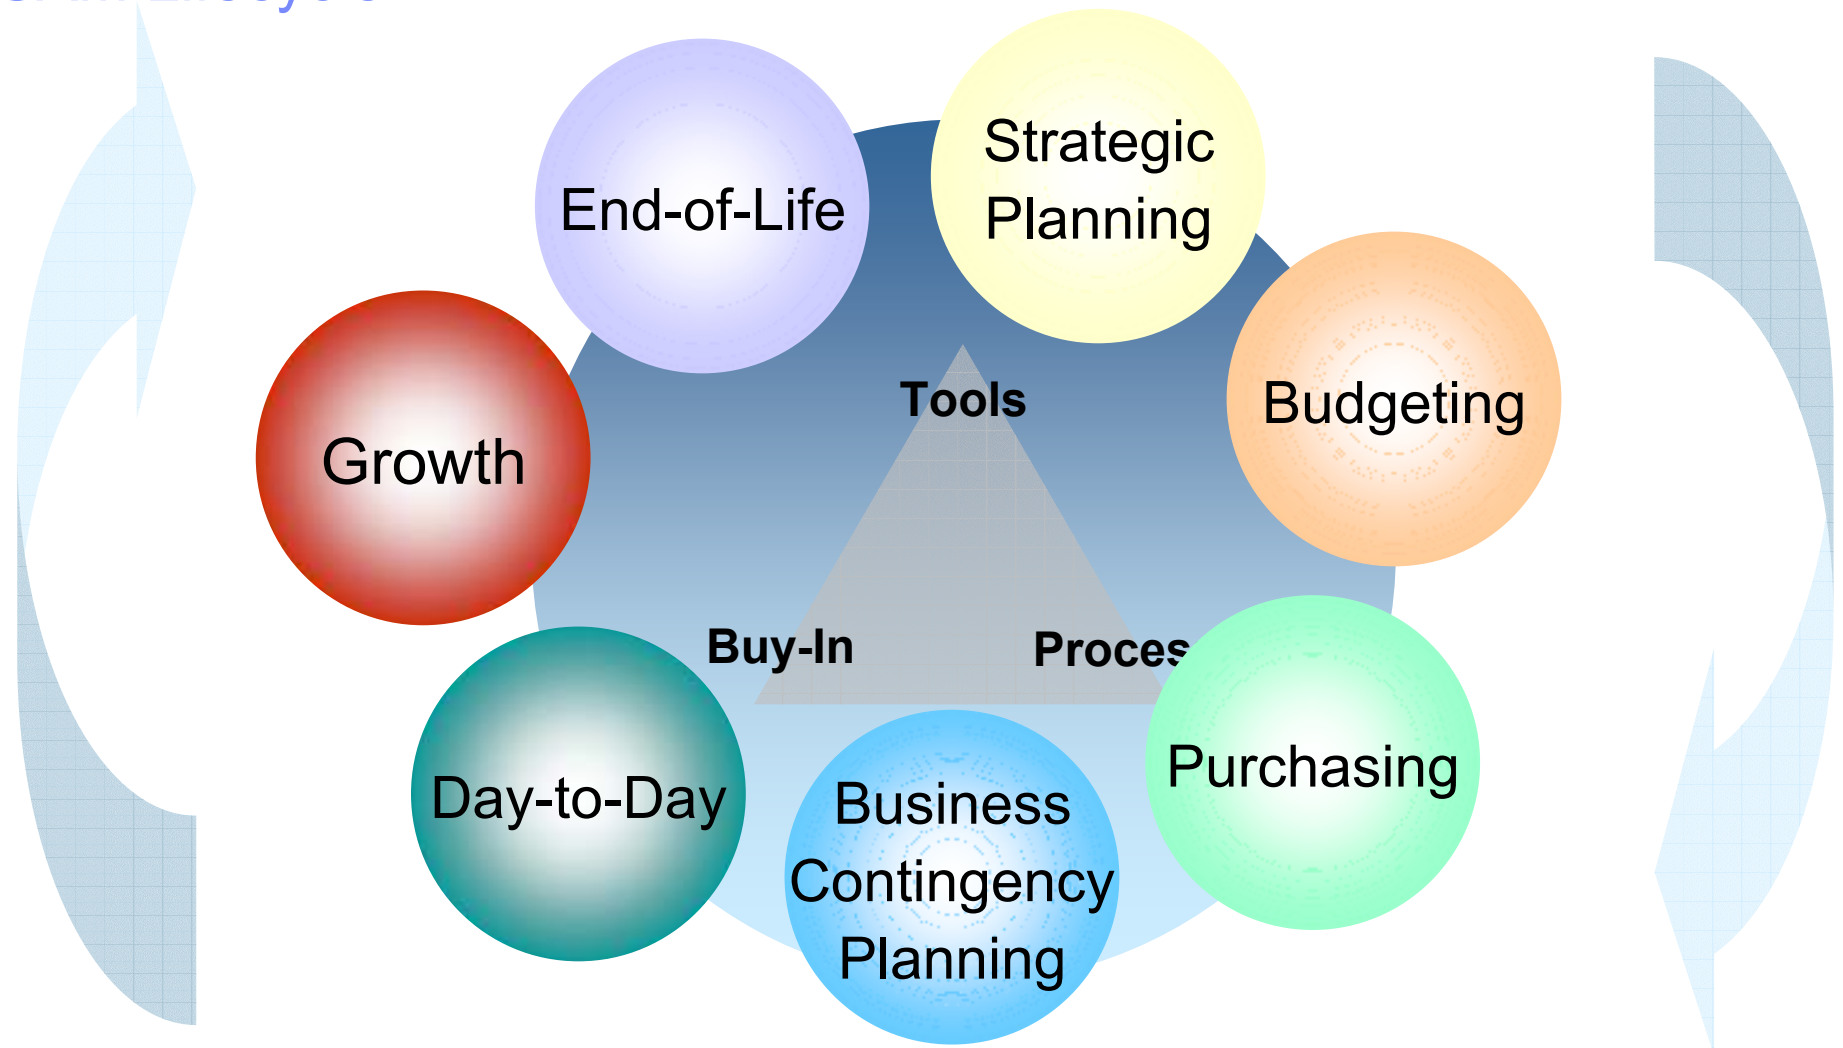

IBM Software et IBM System & Technology Groups

# Université du Mainframe 2005

## SAM Lifecycle

IBM Software et IBM System & Technology Groups

# Strategic Planning

Université du Mainframe 2005

How do I know that my IT organization has tools and processes to align with the corporate strategy?

- Through SAM, quantify the utilization of software that supports an organization's adherence with corporate strategies
- Through SAM, optimize where your software is being used, and by whom
- Through SAM, identify and investigate software expenses

IBM Software et IBM System & Technology Groups

# Budgeting

Université du Mainframe 2005

How do I know that next year's software budget isn't too high (waste) or too low (uncompetitive)?

- Through SAM, accurately track what you actually use; know what software to budget for and what software to eliminate.
- Through SAM, gain visibility to all contracts for maintenance; budget for only the ones you need.
- Through SAM, gain visibility to all service contracts; maintain only the ones you need.

IBM Software et IBM System & Technology Groups

# Purchasing

Université du Mainframe 2005

How do I know that I am optimizing my expenses on software purchases?

- Through SAM, know exactly what you are using and negotiate more cost-effective ELAs and related agreements.
- Through SAM, you can identify unused, underused, and multiple versions of implemented software. Using this information you can rationalize software and eliminate costs.

IBM Software et IBM System & Technology Groups

# Contingency Planning

Université du Mainframe 2005

How do I know that my business can quickly recover in the event of disaster?

- Through ITAM, identify the software and hardware that is critical to the running of your business.
- Through SAM, identify and track key supplier relationships.
- Through SAM, know exactly what contracts you have in place, and their specific terms and conditions.
- Through SAM, you are able to more effectively prioritize recovery

IBM Software et IBM System & Technology Groups

## Day-to-Day

## Université du Mainframe 2005

## How can I be assured that day-to-day IT operations are fiscally responsible?

- Through SAM, immediately validate invoices
- Through SAM, more effectively use charge-back
- Through SAM, established procedures, records, reports, and other support documentation indicate compliance when faced with software audit
- Through SAM, demonstrate adherence to stringent accounting standards (Sarbanes-Oxley)

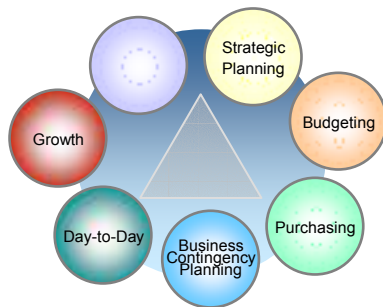

## Growth

Université du Mainframe 2005

## How can I contain the infrastructure costs associated with growth?

- Through ITAM, you know exactly what IT assets you have; understand why and when to re-deploy, acquire or dispose of them.
- Through ITAM you can plan hardware and software upgrades more effectively and efficiently.
- ITAM and Capacity Planning are complementary activities associated with efficiency and effectiveness. You need to do both.

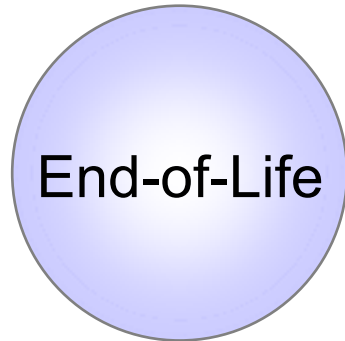

IBM Software et IBM System & Technology Groups

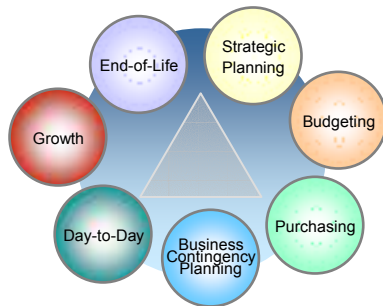

## SAM Lifecycle: End-of-Life

Université du Mainframe 2005

### How do I know when to End-of-Life IT assets?

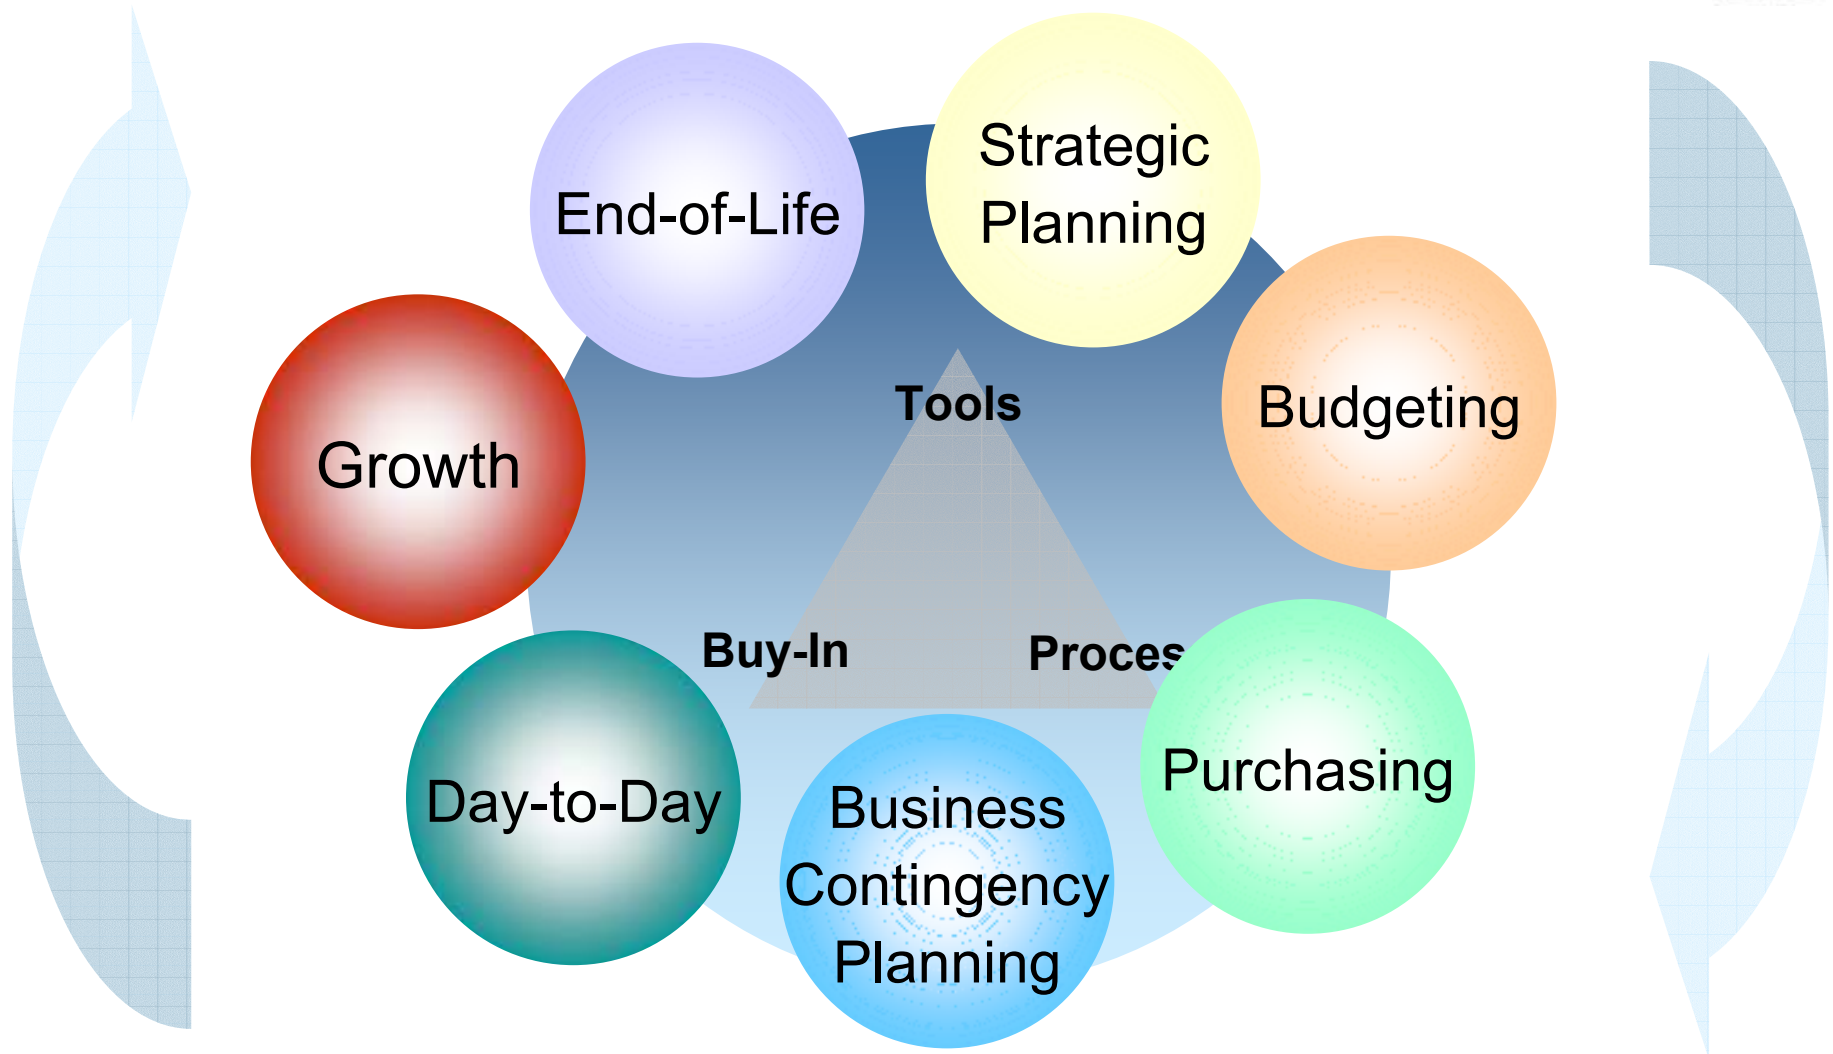

- Through ITAM, you can know exactly which assets are no longer or minimal use and determine if redeployment is appropriate.
- Through SAM, you can know exactly what software is not used, redundant, or multi-versioned, and use that information for EOL decisions.

# ITLCM for z/OS Views

## Université du Mainframe 2005

The screenshot displays the ITLCM interface with three distinct views:

- Tree View (Left):** A hierarchical tree structure showing software inventory organized by hardware and location. The selected node is 'SAS/Base' under 'Prod Sys D'.
- List View (Middle):** A table listing installed software products and their total activity. The selected row is 'SAS/Base' with a total activity of 283.
- Property View (Right):** A detailed view of the selected 'SAS/Base' entry, showing various attributes such as 'Partition', 'Libraries', 'Users', 'Date installed', and 'Usage'.

Labels at the bottom of the screenshot identify each view: 'Tree View', 'List View', and 'Property View'.

- Tree View (Left): A consolidated view of enterprise-wide contractual information organized to show specific hierarchies.
- List View (Middle): Information about the selected data in the tree view.
- Property View (Right): Detailed information about the List View

# ITCCM Views

## Université du Mainframe 2005

The screenshot displays the ITCCM software interface with three distinct views:

- Tree View (Left):** A hierarchical tree structure showing 'Asset Group (Software License Metrics): Compuware'. It includes sub-nodes for various vendors like 'Acme World Enterprises', 'Allen Systems Group, Inc.', 'EMC Corporation', and 'IBM Credit Corporation'. A specific 'Compuware License' is selected.
- List View (Middle):** A table listing assets with columns for 'Asset /' and 'Financial owner'. The data includes:
 

Asset /	Financial owner
Compuware ABEND-AID	Jack Stone
Compuware File-AID for DB2	Jack Stone
Compuware File-AID/Data Aggr	Jack Stone
Compuware Xpediter	Jack Stone
Compuware File-AID	Jack Stone
- Property View (Right):** A detailed view for the selected 'Compuware License'. It shows fields such as 'Agreement' (Compuware SLA 543), 'Platform' (Mainframe), 'Licensed unit capacity' (2500), and 'Licensed unit cost' (USD \$700.00).

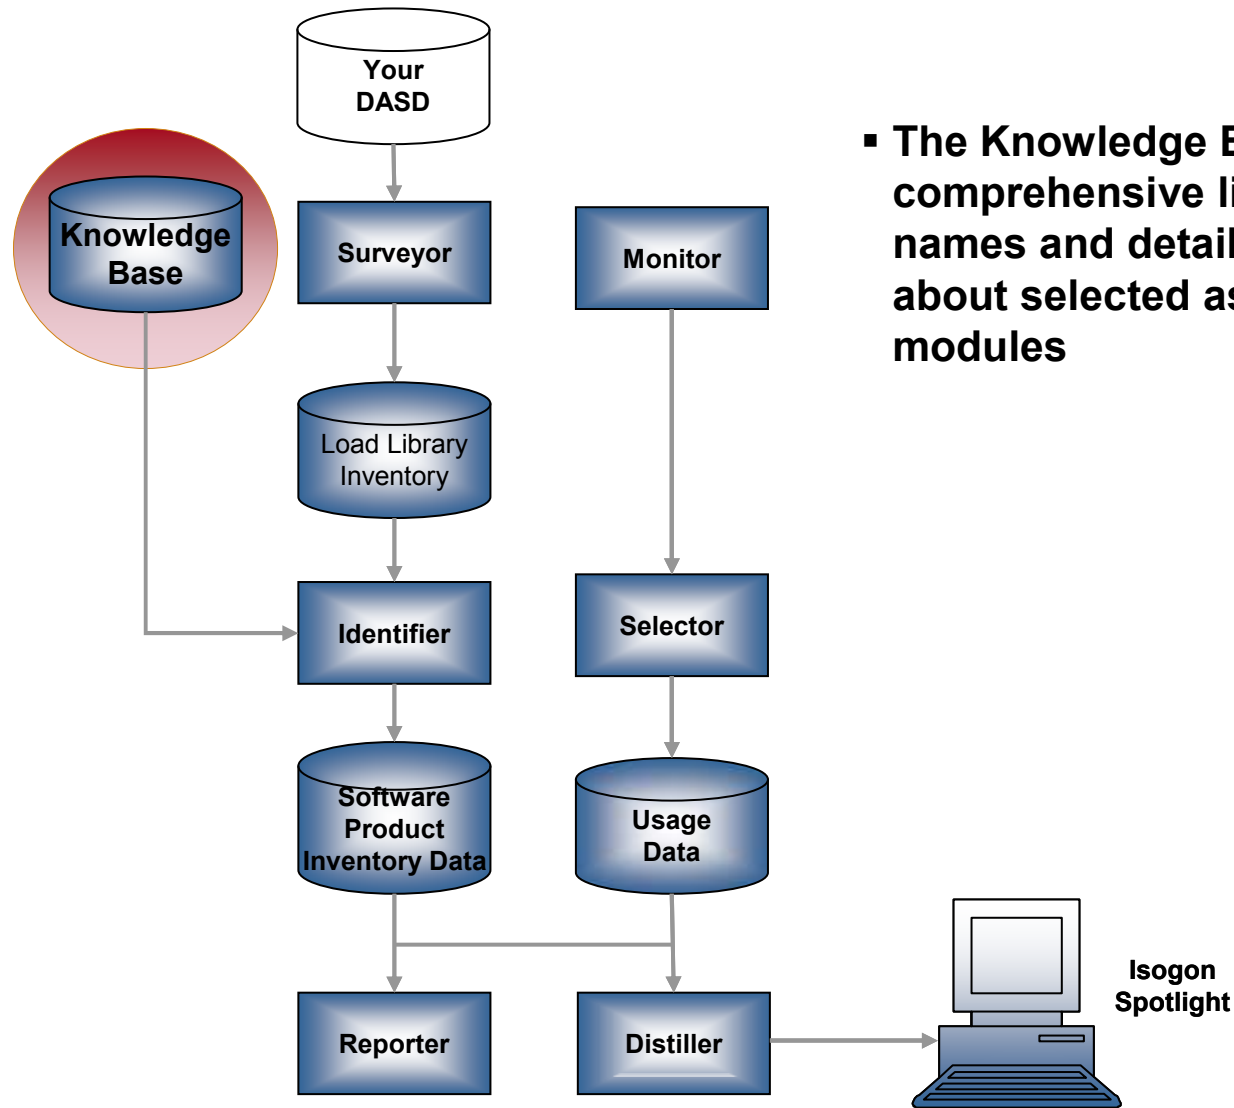

Labels at the bottom of the screenshot identify the views: 'Tree View', 'List View', and 'Property View'.

- **Tree View (Left):** A consolidated view of enterprise-wide contractual information organized to show specific hierarchies.
- **List View (Middle):** Information about the selected data in the tree view.
- **Property View (Right):** Detailed information about the List View.

# ITLCM Components

## Université du Mainframe 2005

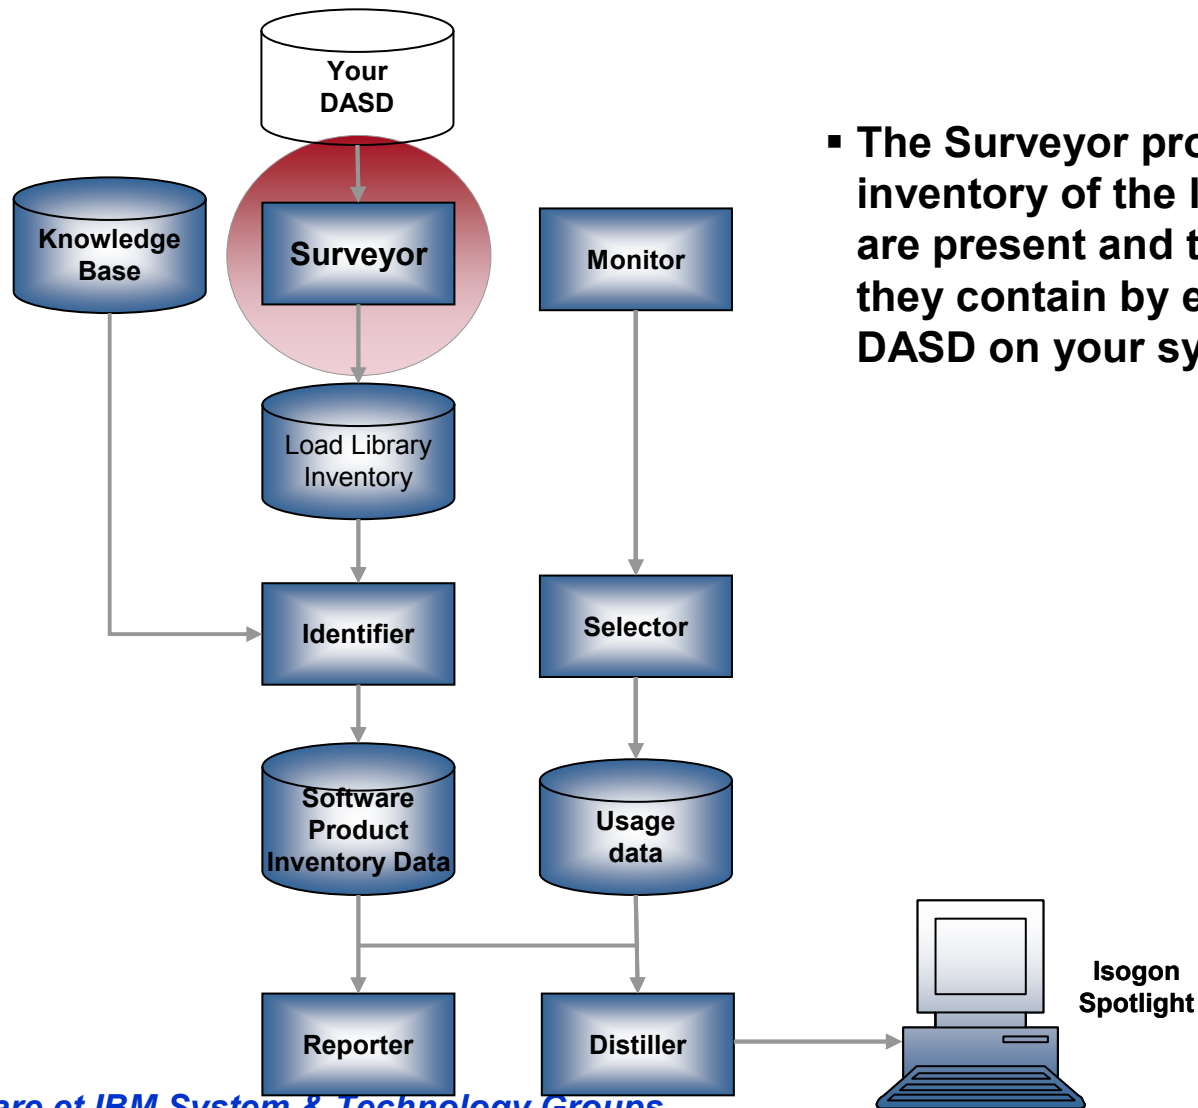

- The Knowledge Base is a comprehensive list of product names and detailed information about selected associated load modules

IBM Software et IBM System & Technology Groups

# ITLCM Components

Université du Mainframe 2005

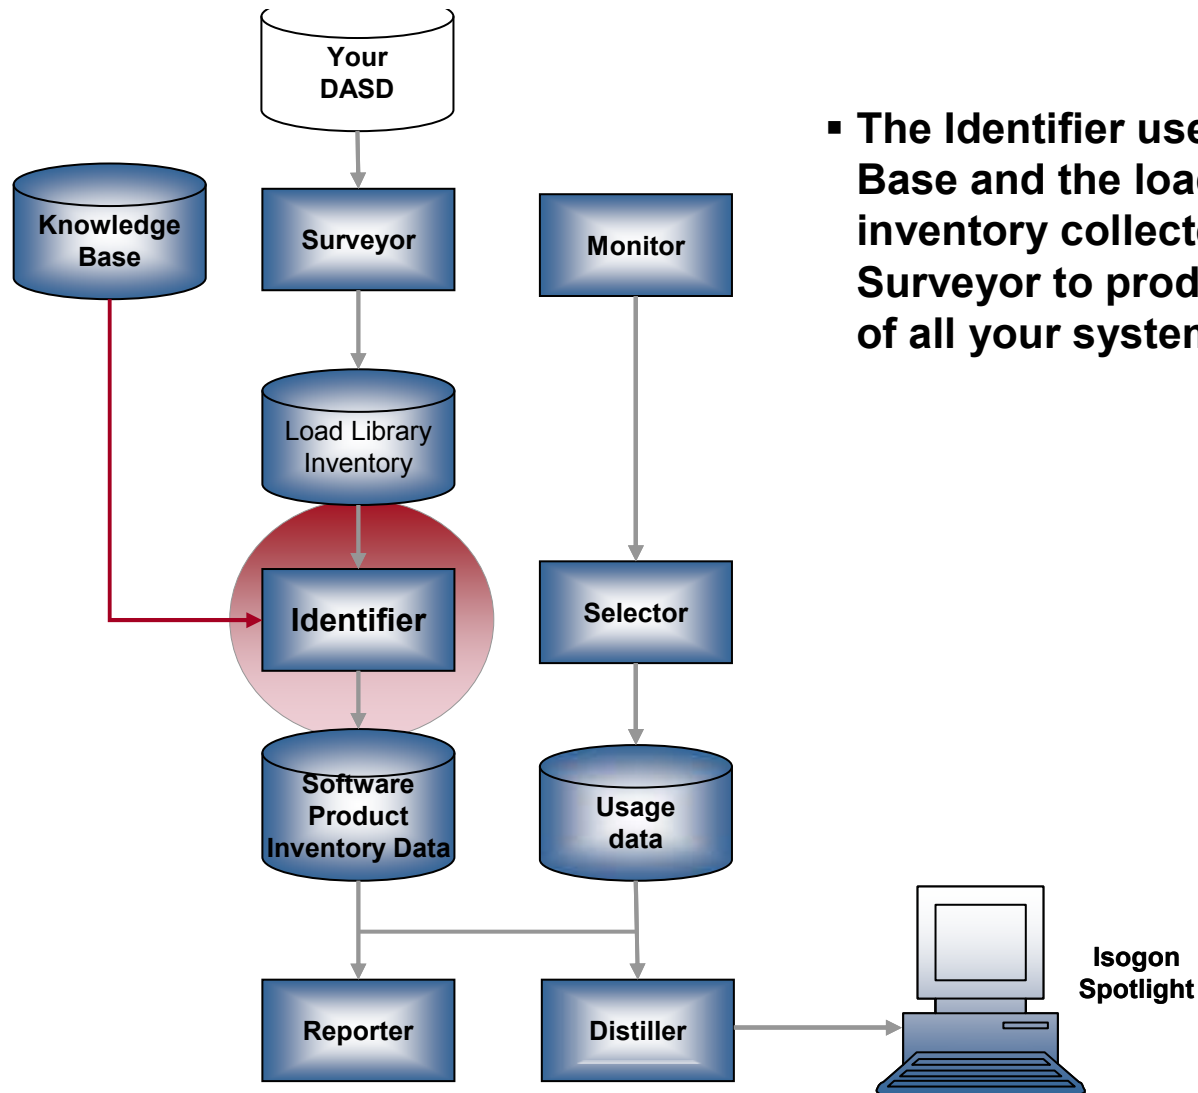

- The Surveyor produces an inventory of the load libraries that are present and the load modules they contain by examining the DASD on your system.

IBM Software et IBM System & Technology Groups

# ITLCM Components

Université du Mainframe 2005

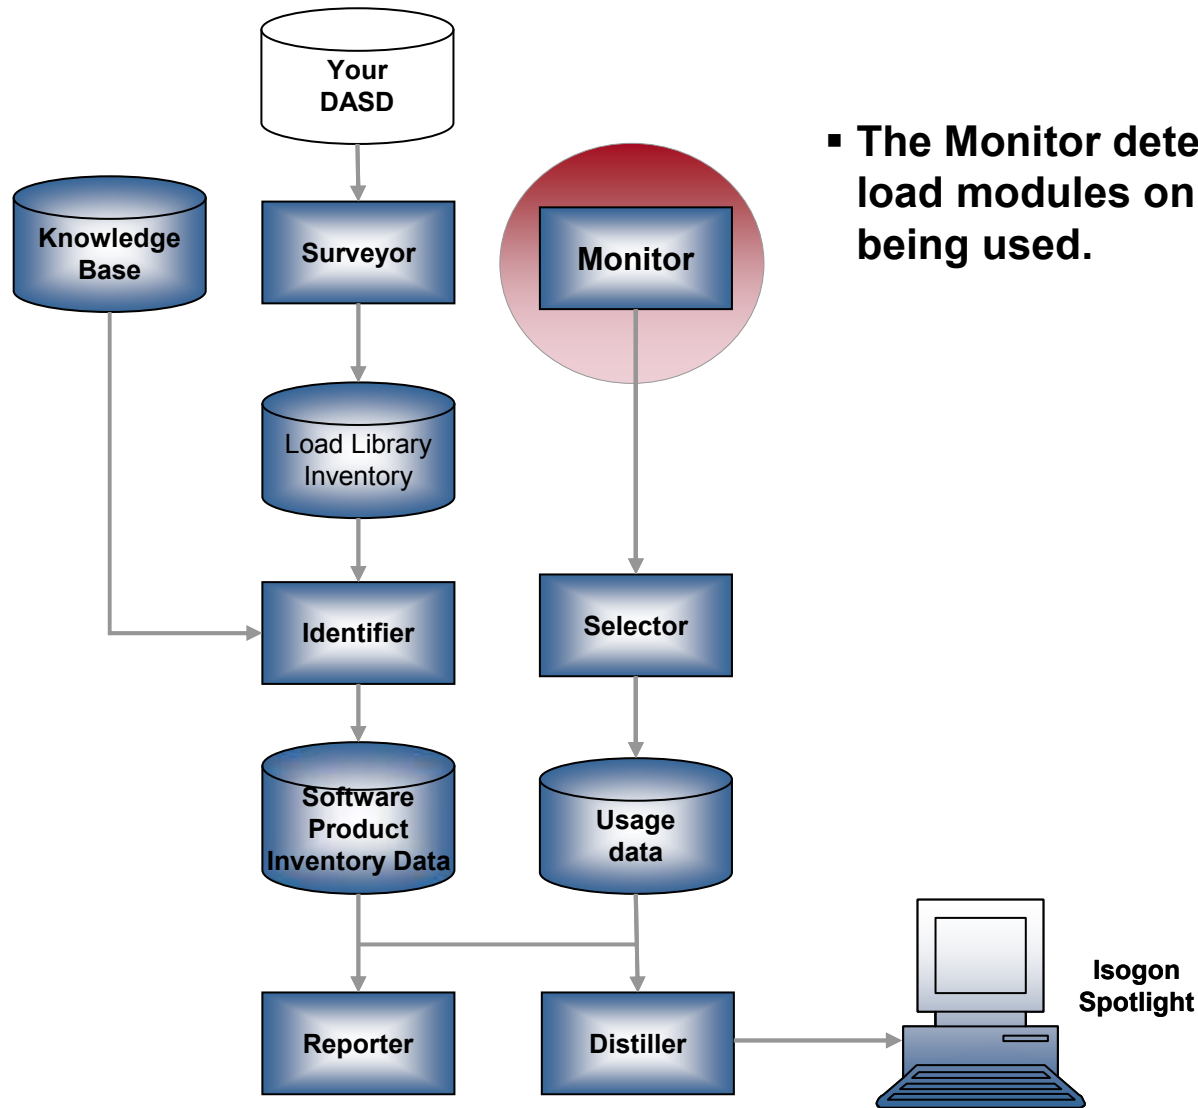

- The Identifier uses the Knowledge Base and the load library inventory collected by the Surveyor to produce an inventory of all your system's products

IBM Software et IBM System & Technology Groups

# ITLCM Components

Université du Mainframe 2005

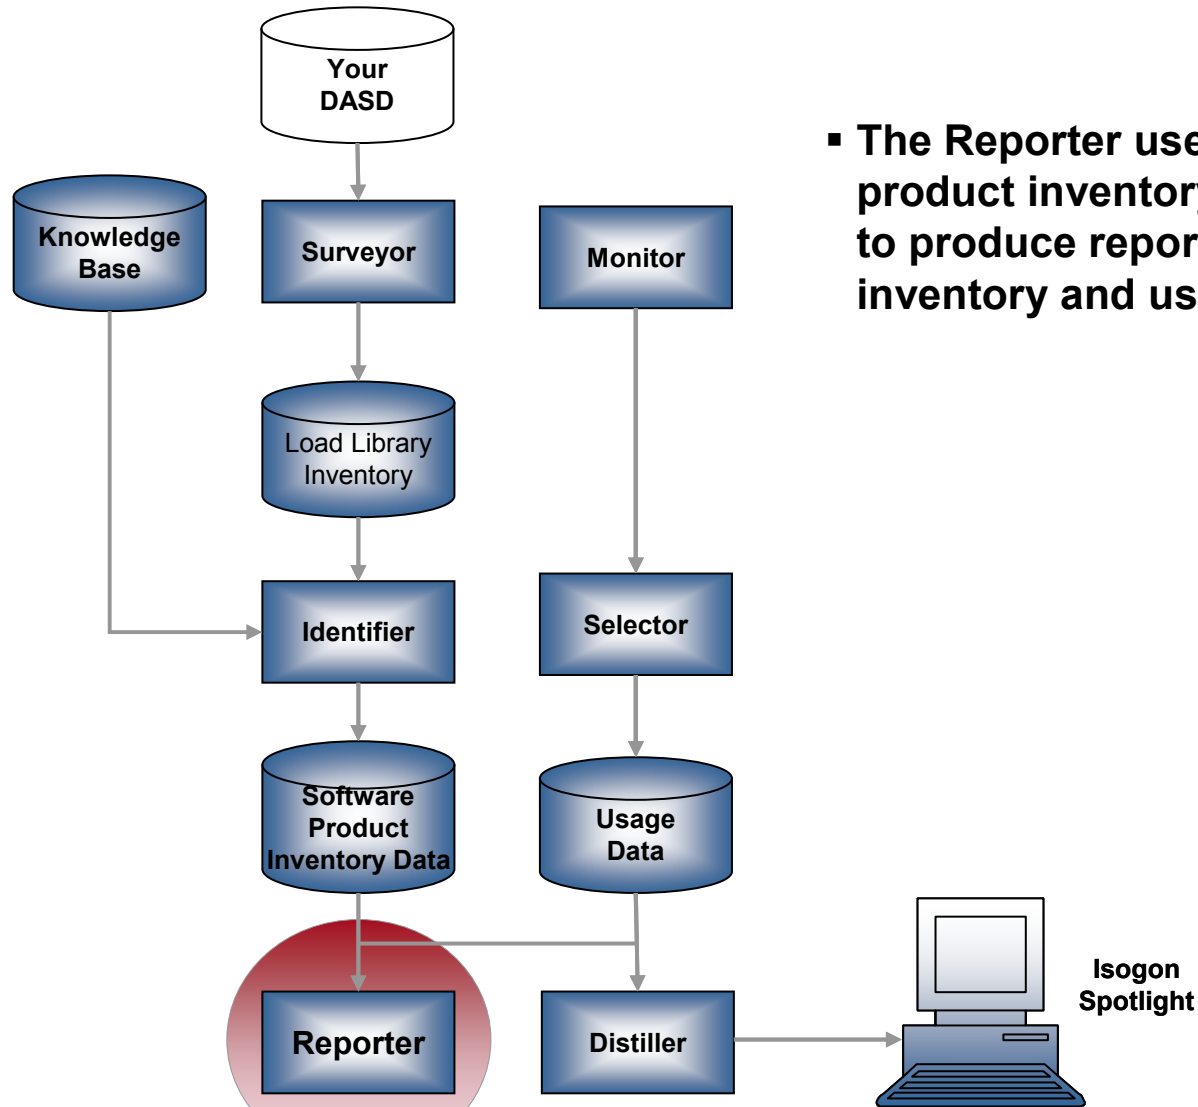

- The Monitor determines which load modules on your system are being used.

IBM Software et IBM System & Technology Groups

# ITLTCM Components

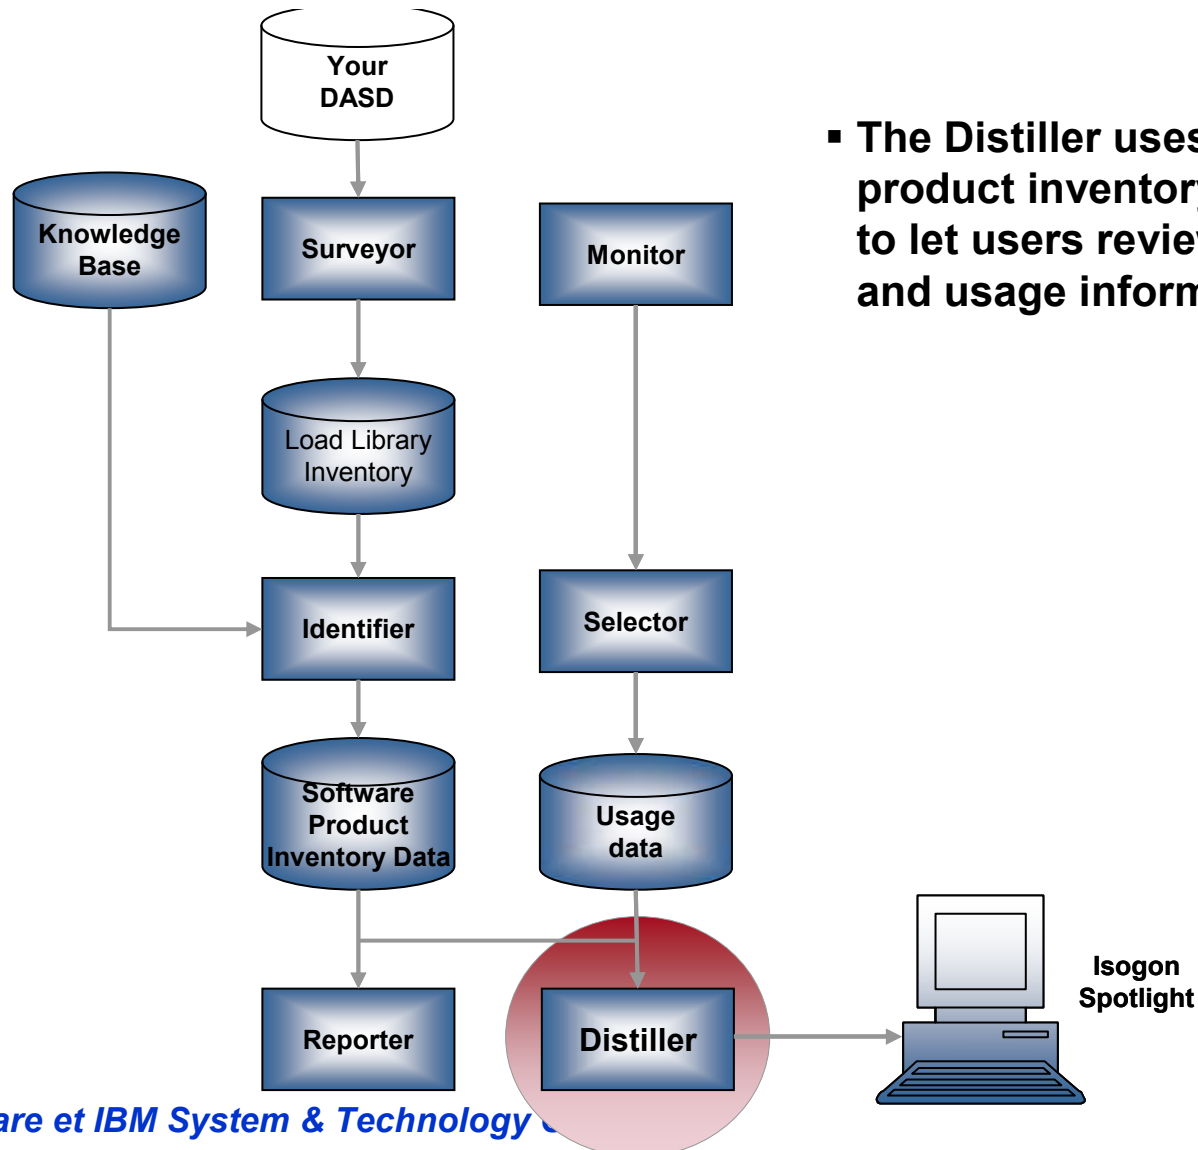

Université du Mainframe 2005

- The Reporter uses the software product inventory and usage data to produce reports about inventory and usage.

# ITLCM Components

Université du Mainframe 2005

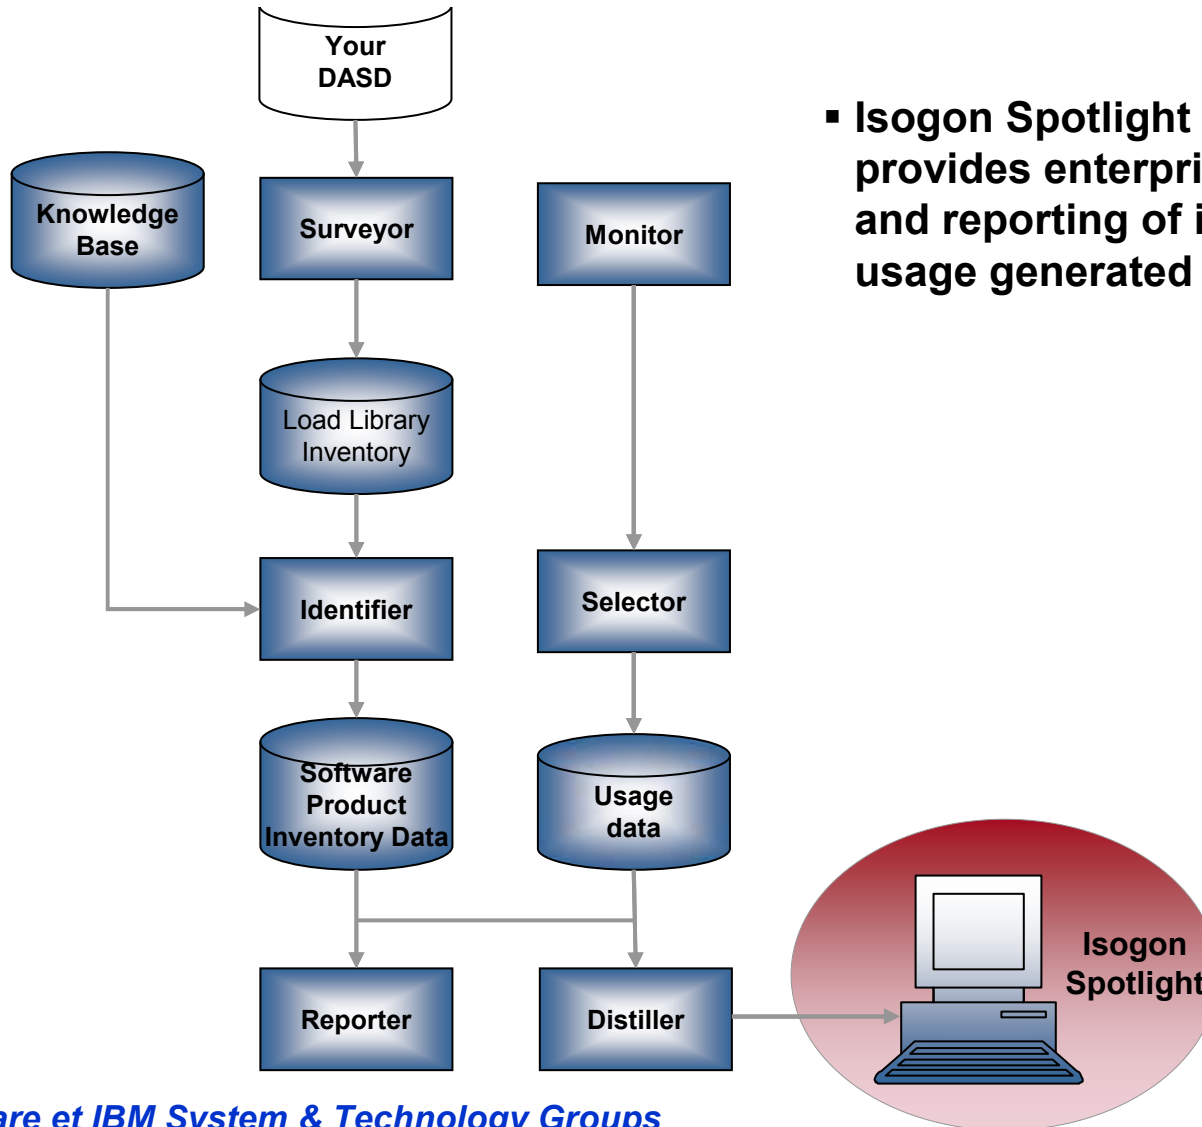

- The Distiller uses software product inventory and usage data to let users review their inventory and usage information.

IBM Software et IBM System & Technology

# ITLCM Components

## Université du Mainframe 2005

- Isogon Spotlight runs on a PC and provides enterprise-wide display and reporting of inventory and usage generated by SoftAudit.
