

Le “plan de formation” de l’information

Guide du Manager

**Forum Intégration et Gouvernance
de l'Information :**
Vers un business plus intelligent

5 Mai - IBM Forum, Bois-Colombes

Synopsis

- Allez vers une organisation plus agile pour mieux répondre aux attentes du métier, tout en maîtrisant les coûts d'exploitation, nécessite la réflexion sur des démarches de transformation informatique.
- La gouvernance des données d'entreprise est de plus en plus au cœur de cette réflexion
- Tout comme des formations ou plans de carrière proposés aux employés contribue à l'amélioration de la performance d'entreprise, une démarche de gouvernance des données est devenu aussi un contributeur clef.

- Le manager informatique à néanmoins des challenges:
 - Comment sensibiliser le métier sur ces enjeux?
 - Comment envisager ce "plan de formation" des données?
 - Comment démontrer un "business case"?
 - Quels sont les premiers pas?
 - Quelle organisation?

- Cette session vous permettra de découvrir des approches et techniques qui ont fait des succès des client IBM dans leurs projet.

LOGICIELS

Comment générer des données de qualité pour doper ses ventes

Le groupe de presse et d'édition Ouest-France rassemble les données clients qui sont dispersées dans différentes applications métiers. Objectif : construire une stratégie marketing plus ciblée et proche des clients... et accroître les revenus.

Dans la majorité des entreprises, les applications logicielles ne communiquent pas entre elles. C'est le fameux syndrome du « silo ». À l'instar du groupe Ouest-France, éditeur du premier quotidien de France, qui souhaite pourtant passer d'une stratégie « produit » à une stratégie « client » afin d'accroître ses revenus en développant de nouvelles offres multicanaux. Dans cette optique, le groupe a voulu implanter un progiciel de gestion de campagnes marketing du français Neolane. Mais, au préalable, il lui a fallu maîtriser la qualité des données de ses deux millions

Defining the terms

Information Governance

« ...is the specification of decision rights and an **accountability** framework to encourage desirable behavior in the valuation, creation, storage, use, archival and deletion of information.

It includes the processes, roles, standards and metrics that ensure the effective and efficient use of information in enabling an organization to achieve its goals. »

Data Quality

« ...is the fitness for a purpose of any type of data relative to the requirements of its usages within a process, application,.... »

Defining the terms

Master Data Management

« ...discipline in which business and the IT organisation work together to ensure the uniformity, accuracy, stewardship, semantic consistency, accountability or the enterprises official, shared master data assets »

Benchmarks can be qualitative and quantitative

- Example quality metrics
 - DQI (Data Quality Index): Index ratio of data quality.
 - DAR (Data Availability Rate): Percentage of time that contracted data was available to “consumers”
 - DIR (Data Integrity Rate): Percentage of time that contracted data was trusted and reliable.
 - DER (Data Error Rate) Number of data errors
- Example business metrics
 - Industry averages
 - Organisational references
 - Competitor information
 - Analysts

Business case

Organisations start governance and information quality initiatives from different places

- Enterprise Architecture Strategy
 - Cost reduction through more efficient usage of information sharing
- Business Analytics
 - Improve decision making capabilities
- Operational applications : CRM, Ordering, ERP, ...
 - Improve or consolidate existing business processes
 - Implement new business processes

Actors and skills will vary depending on your project ambitions

- Organisational management
- Project and ambition stakeholders
- Change management
- Risk management
- KPI management
- Financial management
- Data Stewardship
- Technical Architects and Specialists

Roadmap

Organisational change

- Data governance council

Eliminated 400k duplicate records

- Data stewards

- Understand the data and its connection to business usage
- Have a business function and not an IT function
- Are responsible/accountable for data quality
- Define policy for data management

Conclusions

Gain consensus in the problem before gaining consensus in the solution

Look to gain a common approach rather than a perfect architecture

Establish points of measurement based on existing situation and future ambitions

IT can be a significant enabler for adding value rather than being a « cost to business »

Anticipate organisations changes and how to influence them

Data stewardship should be placed on the business side

Business sponsors are sensitive to metrics and use cases
