MQSeries link for Lotus Notes

Capitalize on your investment, with very little risk.

Lotus Notes software provides you with the technology to give you true collaborative processing. MQSeries software provides you with the technology that gives you time-independent assured delivery of information.

What do you get when you put the two together .... power beyond your imagination. This dynamic duo gives you the elegant solution to the problem of integrating your legacy applications with the much loved, easy to use, Lotus Notes.

We provide that magic link, giving you the supernatural power at your fingertips.

We give you the technology that gives you transaction integration.

We give you the technology to unlock your business critical applications to make them available when and where they are needed.

Protect your investment

Turn your data into information.

Use the power of your transaction processing systems from Lotus Notes.

Make your business critical applications and data work harder for you by making them available throughout your enterprise. There is no need to design special software to bridge gaps between different hardware and the systems they support.

Lotus Notes and MQSeries together can change the way you operate, with less effort than you thought possible.

Together they integrate the two very different worlds of enterprise systems and groupware. You can maximize the benefits of each environment with the minimum of further investment.

Extend the reach of your enterprise

With MQSeries, Lotus Notes now has the ability to communicate with applications on other non-Notes systems. MQSeries now has that essential link with Lotus Notes. An application to application link. From a Lotus Notes application you can now trigger an application to start up on another system. From a Lotus Notes application you now have access to your transaction processing systems.

You can continue to keep your data where it is today, you can continue to keep you applications where they are today, but now you can distribute the power and information to where it is needed. It allows the users to be where they need to be to do their job.

″Whether separated from their information by office or ocean, users can be confident that it will be up-to-date and accessed promptly.″

Improve productivity

A large proportion of your critical data is stored and managed by transaction processing systems. Only transaction processing systems can cope with the volume of data and give you the security, integrity, and reliability you need. You still however, need to develop applications to provide access to your transaction processing applications.

We have the answer. Lotus Notes with MQSeries provide all this function, with virtually no programming effort.

This opens up a whole range of opportunities when designing new applications. You can make use of your current applications within your design, fully exploiting the power of your systems by dividing the workload amongst them.

The future is clear

Today, this link is available for MQSeries for OS/2 and MQSeries for AIX.

This is only the start. Soon there will be support for LotusScript. Soon the link will be available on many more platforms. Non-IBM platforms such as Hewlett Packard, Windows NT and Sun Solaris.

Today MQSeries is available on over 18 platforms, all accessible from your Lotus Notes application. IBM platforms, such as MVS (including both CICS and IMS support) and OS/2. Non-IBM platforms, such as Tandem and DEC. Soon this list will be longer.

We give you the link for the future.
