
IBM Tivoli Provisioning Manager for OS Deployment Version 7.1.1

How to perform a new fix pack installation on Windows servers

© 2014 IBM Corporation

In this IBM Tivoli® Provisioning Manager for OS Deployment version 7.1.1 training module, you learn to perform new fix pack installations.

Assumptions

This training module assumes that you performed these tasks before you start the module:

- You successfully made a backup of your Tivoli Provisioning Manager for OS Deployment environment before the fix pack installation
- You successfully quiesced your Tivoli Provisioning Manager for OS Deployment server
- You successfully backed up both your Tivoli Provisioning Manager for OS Deployment server and your Tivoli Provisioning Manager for OS Deployment database

A backup of your existing IBM Tivoli Provisioning Manager for OS Deployment environment, database, and server gives you a precautionary fall back recovery option. It is assumed that you successfully made these backups before performing a new fix pack installation. It is also assumed that you quiesced the IBM Tivoli Provisioning Manager for OS Deployment server.

Objectives

After you complete this module, you accomplish these tasks:

- Download a new IBM Tivoli Provisioning Manager for OS Deployment fix pack from IBM Fix Central
- Perform a fix pack installation to successfully upgrade your IBM Tivoli Provisioning Manager for OS Deployment server to a new code level

After you complete this module, you can download the correct IBM Tivoli Provisioning Manager for OS Deployment fix pack from IBM Fix Central. After a successful download, you can perform an installation of the new fix pack on an IBM Tivoli Provisioning Manager for OS Deployment server.

Fix pack overview

Know these things about IBM Tivoli Provisioning Manager for OS Deployment fix packs:

- All IBM Tivoli Provisioning Manager for OS Deployment fix packs are complete product builds
- A fix pack is an upgrade to a revision of Tivoli Provisioning Manager for OS Deployment:
 - The fix pack is for Tivoli Provisioning Manager for OS Deployment 7.1.1.12, running on Windows®
 - You must use a valid IBM user ID and password to download fix packs
 - You download the fix pack code from IBM Fix Central
 - Fix Pack Central URL: <http://www-933.ibm.com/support/fixcentral/>

As stated on this slide, IBM Tivoli Provisioning Manager for OS Deployment fix packs are complete product builds. They are upgrades. Do not misinterpret these as software patches. Downloading these fix packs from IBM Fix Central requires a valid IBM user ID and password. The URL for IBM Fix Central is displayed on this slide.

Fix Central (1 of 6)

- Go to the IBM Fix Central portal at <http://www-933.ibm.com/support/fixcentral> and perform these actions:
 - Click the **Select product** tab and set **Product Group** to **Tivoli**
 - Set **Select from Tivoli** to **Tivoli Provisioning Manager for OS Deployment**
 - Set **Installed Version** to **7.1.1.12** and **Platform** to **Windows**
 - Click **Continue**

The screenshot shows the IBM Fix Central web interface. The top navigation bar includes 'Industries & solutions', 'Services', 'Products', 'Support & downloads', and 'My IBM'. A search bar is on the right. The main content area is titled 'Fix Central' and contains a sidebar with links for 'Inventory upload', 'Supported products', 'Help', and 'Feedback'. The main area has a search bar and a 'Find product' / 'Select product' section. Below this, there are several dropdown menus: 'Product Group' (set to 'Tivoli'), 'Select from Tivoli' (set to 'Tivoli Provisioning Manager for OS Deployment'), 'Installed Version' (set to '7.1.1'), and 'Platform' (set to 'Windows'). A 'Continue' button is at the bottom of the form.

Go to the URL of the IBM Fix Central portal that is shown on this slide. After the portal finishes loading, click the **Select product** tab. From the **Product Group** menu, select **Tivoli**. Next, select **Tivoli Provisioning Manager for OS Deployment** from the **Select from Tivoli** menu. In this example, the user is downloading version 7.1.1.12 for Windows operating systems. From the **Installed Version** menu, select **7.1.1.12**, and from the **Platform** menu, select **Windows**. Next, click the **Continue** button.

Fix Central (2 of 6)

- Select **Browse for fixes**
- Click **Continue**

Identify fixes

Tivoli, Tivoli Provisioning Manager for OS Deployment (7.1.1.12, Windows)

Identify fixes

Search for fixes for your specific product, type, and platform or search for a fix by ID.

Browse for fixes Browse for all fixes for your specific product, release, and platform.

APAR or SPR Search for fixes by entering one or more APAR or SPR numbers each separated by a comma. (e.g. PK10906)

Individual fix IDs Search for updates by entering one or more fix IDs each separated by a comma. (e.g. smm_for_sarcast_06-5.2.0-15411_linux_32-64)

Text Search for fixes containing all the entered key words, such as problem area, exception, or message ID, in any order.

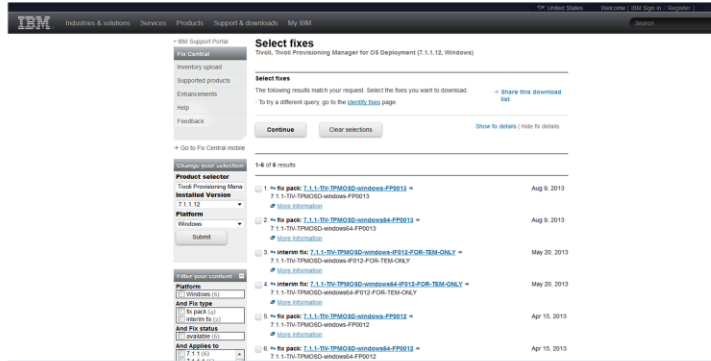

Additional query options

Select the **Browse for fixes** option and click the **Continue** button.

Fix Central (3 of 6)

These actions are taken to accomplish selection of the fix pack necessary to upgrade to IBM Tivoli Provisioning Manager for OS Deployment V7.1.1.12 for a Windows OS server:

- Select the **fix pack: 7.1.1-TIV-TPMOSD-windows-FP0012** check box
- Click **Continue**

In this example, you are upgrading to IBM Tivoli Provisioning Manager for OS Deployment 7.1.1.12 on a Windows OS server. Check the fifth fix check box for **7.1.1-TIV-TPMOSD-windows-FP0012** and click the **Continue** button.

Fix Central (4 of 6)

Sign in with your IBM ID and password

You are now prompted by the sign-in screen to sign in with your IBM ID. Enter a valid IBM ID and a valid password into the appropriate text boxes and click the **Sign-in** button.

Fix Central (5 of 6)

- Select one of the download options (Download Director or HTTP)
- Select the **Include prerequisites** check box and press **Continue**

The screenshot shows the 'Download options' page in Fix Central. The page title is 'Tivoli, Tivoli Provisioning Manager for OS Deployment (7.1.1.12, Windows)'. Under the heading 'Select download options', there are two radio buttons: 'Download using Download Director (requires Java enabled browser)' and 'Download using your browser (HTTP)'. Below this, there is a 'CAUTION' section with a warning about prerequisites and a checked checkbox labeled 'Include prerequisites and co-requisite files (you can select the ones you need later)'. At the bottom, there are 'Continue' and 'Back' buttons.

Select either Download Director or HTTP as a download option. Download Director creates multiple simultaneous parallel download connections and is faster than HTTP. After selecting a download option, press the **Continue** button. Notice the check box that states **Include prerequisites and co-requisite fixes**. It is just above the **Continue** button. Select the check box to ensure obtaining a listing of all required fixes.

Fix Central (6 of 6)

- Verify that you are preparing to download the correct fix pack
- Click **Download now**

Look at the information on the page. Make sure that you are downloading the correct fix. After you verify that the fix version is correct, click the **Download now** button.

Perform partial uninstallation (1 of 3)

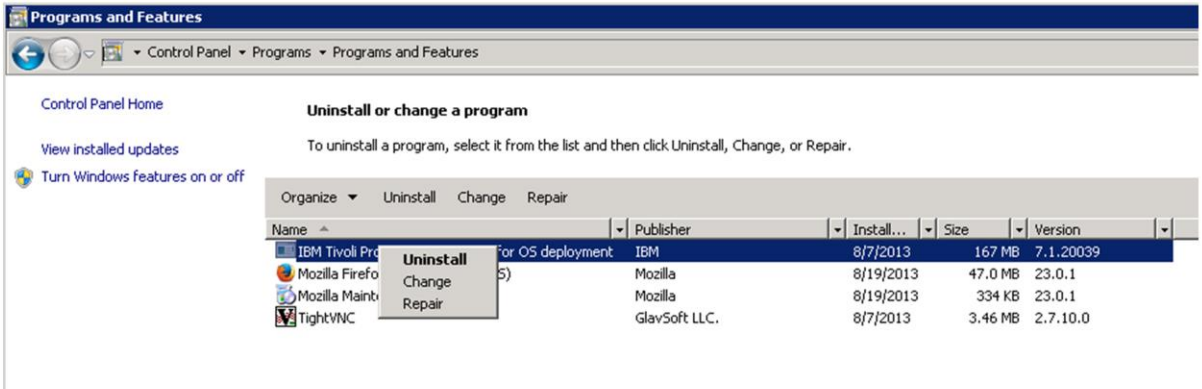

Start > Control Panel > Programs and Features

From the Windows 8 operating system desktop, click the **Start** icon. Next, click **Control Panel** and go to **Programs and Features**.

Perform partial uninstallation (2 of 3)

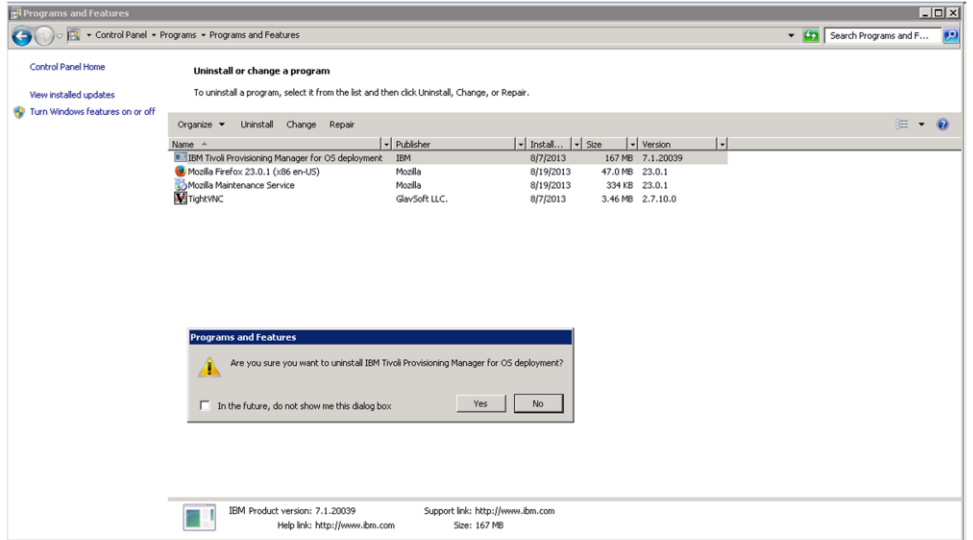

Partial uninstallations leave the configuration, profile, and database to be reused with the new fix pack

Click **IBM Tivoli Provisioning Manager for OS Deployment**. Right-click and select **uninstall** from the menu options. Uninstall performs a partial uninstallation of the product. It leaves your existing configurations, profiles, and database in place. The configurations, profiles, and database are reused during installation of a new fix pack.

Perform partial uninstallation (3 of 3)

Click **Yes** to confirm

Click the **Yes** button to confirm that you want to perform the partial uninstallation of IBM Tivoli Provisioning Manager for OS Deployment.

Windows pre-installation environment (WinPE) deployment engines (1 of 2)

To upgrade the WinPE 3.1 deployment engines during the fix pack installation:

- Perform a download and installation of the Windows Automated Installation Kit (WAIK) for Windows 7 (version 3.0)
- The URL is <http://www.microsoft.com/en-us/download/details.aspx?id=5753>

Windows Pre-installation Environment (WinPE) deployment engines are a requirement. 32-bit and 64-bit WinPE deployment engines are created when provisioning Windows operating systems. IBM Tivoli Provisioning Manager for OS Deployment automatically determines which bit size of WinPE deployment engine is needed for a deployment task.

Learn more

On this slide, you see the Windows Automated Installation Kit (WAIK) for Windows 7 download website. Go to the URL displayed and download the file that is named KB3AIK_EN.iso. Burn the iso image to a DVD. Perform WAIK installation on the IBM Tivoli Provisioning Manager for OS Deployment server.

Windows pre-installation environment (WinPE) deployment engines (2 of 2)

- To create the WinPE 4.0 deployment engines after the Fix Pack installation, download and install the Windows Assessment and Deployment Kit (WADK)
- Windows Assessment and Deployment Kit for Windows 8
 - <http://www.microsoft.com/en-us/download/details.aspx?id=30652>
 - Only needed for Windows 8 and Windows 2012

Windows Assessment and Deployment Kit (WADK) for Windows 8 is needed to deploy Windows 8 and Windows 2012.

If you are not deploying these operating systems, you do not need to install WADK and generate the WinPE 4.0 deployment engines.

Download windows assessment and deployment kit

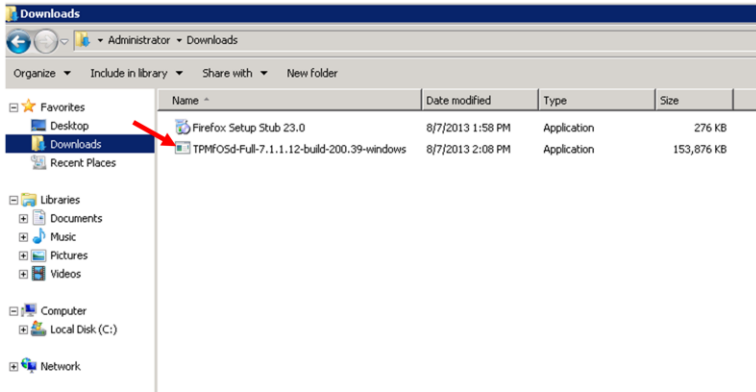

Download and run `adk\adksetup.exe`

The screenshot shows the Microsoft Download Center page for the Windows Assessment and Deployment Kit (ADK) for Windows 8. The page includes a search bar, navigation links for Software, Categories, Security, Support, and Shop, and a 'Download' button. Below the download button, there is a description of the ADK and links for Details, System Requirements, and Install Instructions. On the right side, there are sections for 'Free PC updates' and 'Click in and do more with Surface'.

On this slide, you see the website to download WADK for Windows 8. Download and run the file `adk\adksetup.exe` to install WADK 1.0.

IBM Tivoli Provisioning Manager for OS Deployment installation (1 of 7)

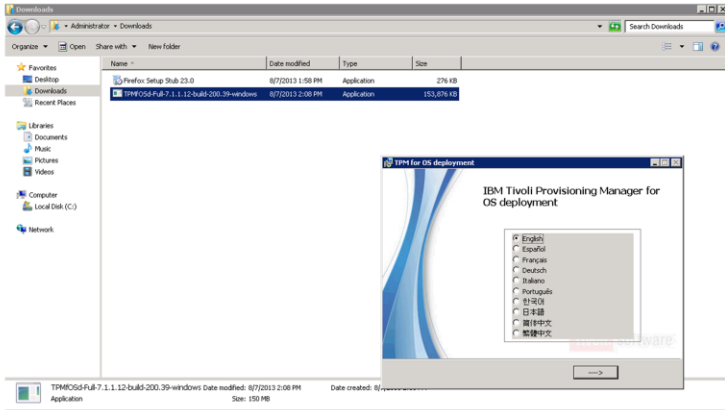

Locate and double-click the self-extracting executable file

To start the installation of Tivoli Provisioning Manager for OS Deployment, double-click the self-extracting executable downloaded earlier. This action begins the installation wizard.

The Tivoli Provisioning Manager for OS Deployment web base GUI is displayed. The GUI displays the fix pack version that was installed. Log in to verify the installation.

Installation verification (2 of 2)

Green checks in the Error check section inform that the upgrade was successful

The first screen indicates whether any error occurred during the upgrade process. A green check mark confirms that the installation was successful. Your Tivoli Provisioning Manager for OS Deployment system is now ready for use. If you are going to deploy either Windows 8 or Windows 2012, then you need to create the WinPE 4.0 deployment engine.

Summary

Now that you completed this module, you accomplish these tasks:

- Download a new Tivoli Provisioning Manager for OS Deployment Fix Pack from IBM Fix Central
- Perform a fix pack installation to successfully upgrade your Tivoli Provisioning Manager for OS Deployment server to the new code level

Now that you completed this module, you can download a new Tivoli Provisioning Manager for OS Deployment Fix Pack from IBM Fix Central and upgrade your Tivoli Provisioning Manager for OS Deployment server to the new code level.
