WebSphere software

IBM Software Services for WebSphere
Improve your time to productivity with global services delivery

Highlights

- **Stretch IT implementation budgets**

- **Experience faster delivery**

- **Leverage IBM WebSphere's global capacity and experience**

Local problems, global resources

You need a lower-cost solution, but you have concerns about using geographically dispersed resources for critical projects. IBM Software Services for WebSphere® is a trusted partner that can help. We know that successful global projects require two key elements: deep skills in the chosen technologies combined with a proven project governance model to guide those skills to a successful and cost-effective result. We can combine unparalleled WebSphere product expertise from our software development labs with our global services resources to deliver projects regardless of size, location or complexity.

IBM's lab-based services teams develop deep technical insight gained from thousands of successful client projects using IBM Software. We create the best practices that others follow, and we bring our extensive knowledge base and global resources to your next project. Through the combination of our experience, proven

global project methodology and worldwide resources, we can provide you with financial advantages while minimizing the challenges associated with a globally dispersed project team. Lab-based expert consultants in our U.S., Canada, Egypt, India, China and other development sites guide all aspects of the project including architecture, design, development and production deployment.

Beyond the financial advantages, our global delivery capability can provide project resources close to your global teams and the markets you serve. Additionally, our global capability can enable your project to be completed more quickly by taking advantage of time-zone differences that allow for 24/7 productivity.

Is a global delivery model right for you?

We can help you initiate your project with a feasibility study to determine whether a global delivery model fits your needs and objectives. Following the feasibility determination, our global team can assist you throughout your project's lifecycle, with the flexibility and resources to engage in every stage of your project.

Consider IBM's Software Services for WebSphere global delivery capability for your next project, and let us help you realize faster time-to-value and competitive advantage with our full range of business consulting, project management, application development, maintenance, software testing and other software

development services. We are committed to your long-term success. Our services protect your software investment and continue to increase your returns.

Typcial Activities:

The following are typical activities that can be completed by a WebSphere consultant during your project's lifecycle:

Architecture and Design

- Assist with defining your project scope
- Assist with development of overall project technical strategy
- Assist with identifying functional and non-functional requirements
- Review and validate architectural decisions and solution design
- Assess the feasibility of a design through a prototype or pilot engagement
- Develop a detailed architecture and project plan
- Provide detailed estimates
- Identify skills enablement needs
- Address infrastructure, migration and performance considerations

Application Development and Testing

- Identify use cases
- Identity patterns that can be used to accelerate development
- Identify service and component modeling patterns
- Define and implement test and build strategies
- Develop test cases and scripts
- Design, build, test and deploy application components

Migration

- Assist with assessing and planning migration
- Install development environment
- Migrate existing code artifacts
- Optimize runtime architecture
- Plan deployment readiness
- Assist with test and remediation
- Assist with production rollout

Deliverables:

Deliverables vary based on the scope of your project. However, at the project's conclusion, IBM Software Services for WebSphere may deliver one or more of the following:

- Engagement summary report
- Design document
- Code artifacts
- Best practices recommendations
- Education recommendations

Train without traveling

In addition to traditional education offerings, IBM offers many instructor-led online courses. Our courses enable you to get the most from your WebSphere software investment. For additional IBM course information, please visit the following URL:
