Gaining Control of Your Constantly Changing Requirements

Dwayne Dreakford

Product Manager, Requirements Management, IBM Rational

Software Development Lifecycle Webcast Series 2008

Rational. software

@business on demand.

Gaining Control of Your Constantly Changing Requirements

- The reality: requirements change
- Planning for requirements management
- Automating requirements management
- People, processes and technology
- Looking into the (near) future
- Summary

The reality: requirements change

Why do we go to the trouble of managing requirements?

- ▶ Requirements will change during the software development lifecycle
 - Perception, communication and information gaps are discovered
 - Business conditions change
 - Project scope must be carefully monitored
- ▶ Modern development processes expect and embrace change (Agile, RUP based variants, Scrum)

Questions posed by requirements change

Each change to requirements poses questions

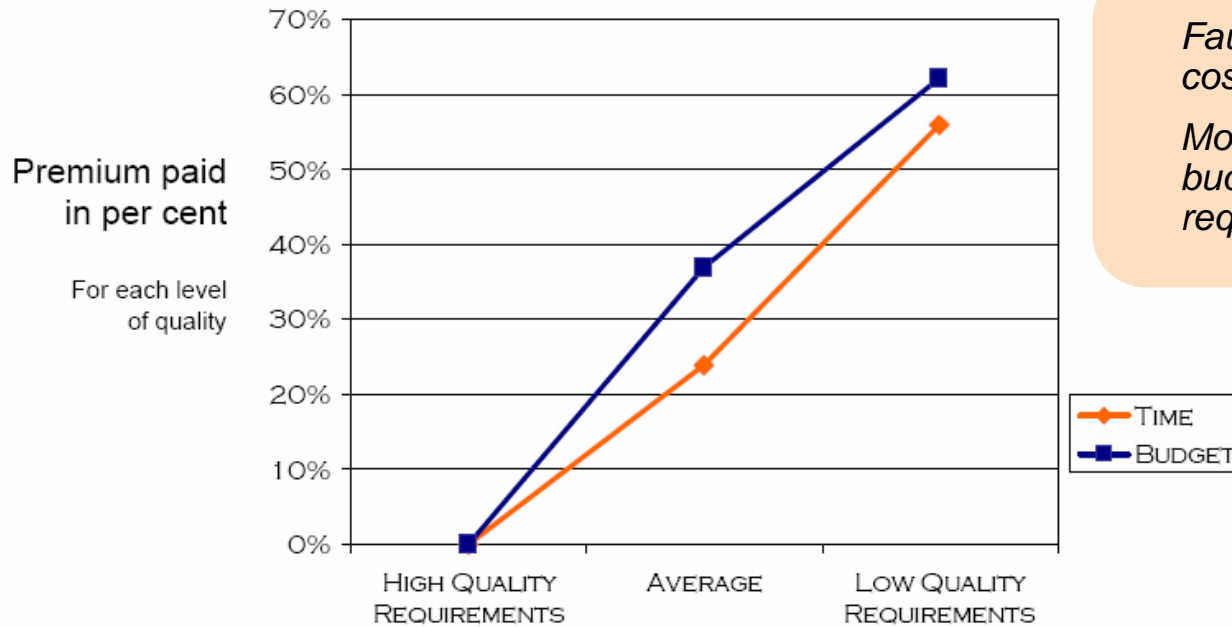

- Who requested this change?
- Who needs to be notified of this change?
- Which use cases are affected?
- Do we have tests to verify the new behavior?
- Which components are affected by this change?
- How will this affect project scope?

We cannot effectively manage the Software Development Lifecycle unless we can answer these questions posed by change

We pay dearly when we cannot efficiently answer questions posed by change

BUSINESS REQUIREMENTS PREMIUM*

Faulty requirements on average cost an additional \$2.24MM

More than 40% of IT development budget will be consumed by poor requirements

* Average increase in the overrun on time or cost versus projects that used high quality requirements

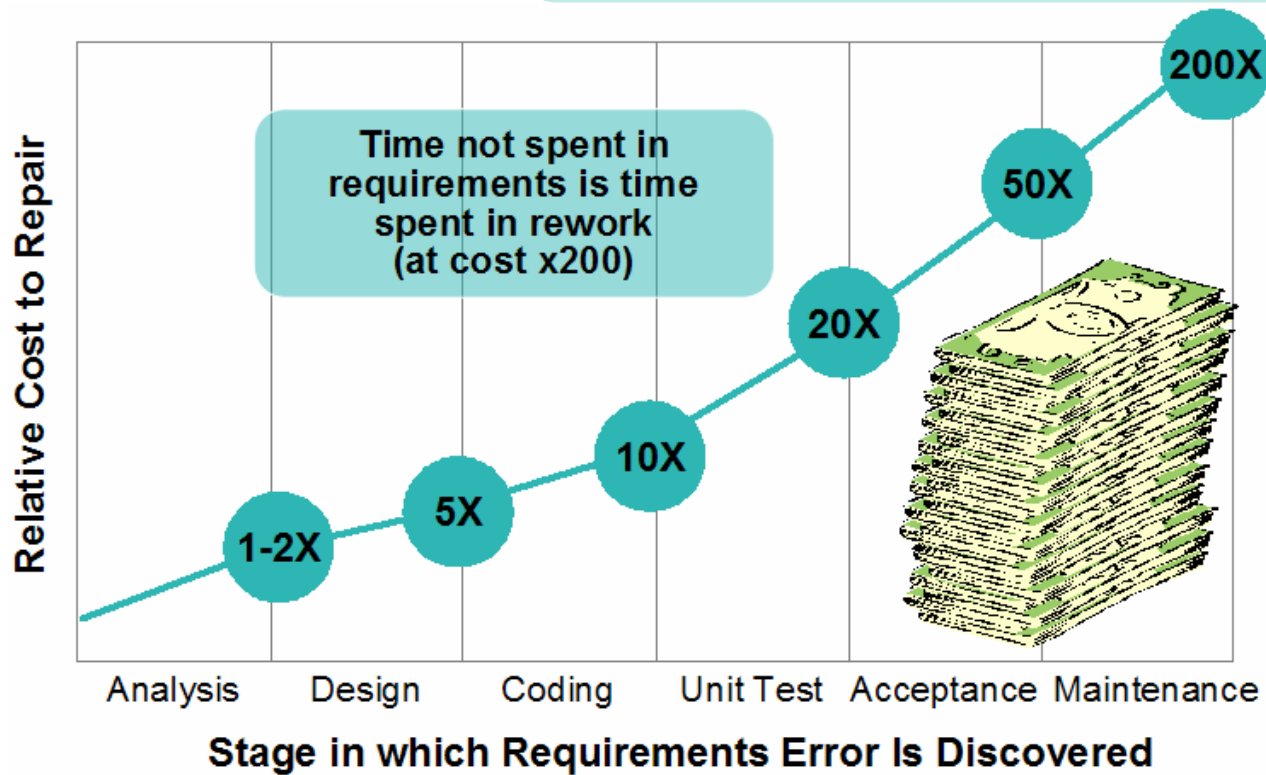

N=109

Source: IAG Business Analysis Benchmark, 2008

We pay dearly when we cannot efficiently answer questions posed by change

*Unmanaged Requirements Cause Unmanageable Budgets ... a primary reason for excessive rework, delays, poor quality, and **project failure***

Gaining Control of Your Constantly Changing Requirements

- The reality: requirements change
- Planning for requirements management
- Automating requirements management
- People, processes and technology
- Looking into the (near) future
- Summary

The Requirements Management Plan

A textbook definition:

A systematic approach to eliciting, organizing, and documenting the requirements of the system, and establishing and maintaining agreement between the customer and the project team on the changing requirements of the system.

Rational Unified Process

Practically speaking...

The Requirements Management Plan – *Intent*

The requirements management plan provides a blueprint for answering questions posed by change

Which questions will we need to answer?

- ▶ Will we comply with specific regulatory requirements?
 - e.g. FDA 21 CFR Part 11, Sarbanes-Oxley
- ▶ Will we maintain an audit trail for all changes?
- ▶ How will we share project status?

The Requirements Management Plan – *Traceability*

The requirements management plan describes how traceability will be used

- ▶ Traceability is the linking of requirements with everything else
 - Use cases to business requirements
 - Tests to use cases

Analysis based on traceability provides answers to questions posed by change

- ▶ Business justification
 - Why do we have this use case? Does it support a business objective?
- ▶ Coverage
 - Do we have tests to verify the new behavior?
 - Do we have use cases that cover our features?
- ▶ Impact
 - Which use cases are affected by this business rule change?
 - Which components might we need to modify?

The Requirements Management Plan

Project and solution characteristics

The requirements management plan is indicative of project and solution characteristics

- ▶ What types of requirements will we manage?
 - Business objectives, business rules, features, use cases, non-functional requirements
 - Capability gaps (SAP® development)
- ▶ What attribute values will we maintain for requirements?
 - Status, Priority, Planned Iteration, Contact Name
- ▶ What levels of security must be enforced?
 - Who gets access to which requirements?
- ▶ Will we maintain multiple releases?

The Requirements Management Plan

Team demographics

Right-size your
development process

The requirements management plan is indicative of team demographics

- ▶ What roles are involved in defining and managing requirements?
 - business analyst, architect, tester, project manager, etc.
- ▶ How large is the project team?
 - Will people act in multiple roles?
- ▶ Will we outsource development?
 - Who owns the requirements?
- ▶ Can we gather everyone in the same room to get answers?
 - Is the team geographically distributed?

The Requirements Management Plan

Change control

Right-size your
development process

The requirements management plan describes how we will control change

How much control do we need?

- Do we simply need to find answers to our questions?
- Must changes be approved before they are made?
- How much of an audit trail is required?
- How complex is our project environment?

When is the right time to introduce change control?

Gaining Control of Your Constantly Changing Requirements

- The reality: requirements change
- Planning for requirements management
- Automating requirements management
- People, processes and technology
- Looking into the (near) future
- Summary

Managing Requirements with IBM Rational RequisitePro

Requirements management for the whole team

- **IBM Rational RequisitePro**
 - ▶ Flexible, integrated requirements and use case management

- **Key Benefits**
 - ▶ Secure requirement repository for easy access and control
 - ▶ Robust web interface for remote access
 - ▶ Live Word requirements documents for ease of use and lowered learning curve
 - ▶ Powerful database infrastructure for filtering and reporting

Organizing Requirements

Types, Attributes, Views, Packages

Requirement types are defined by attributes

Attributes store answers to questions posed by change

- ✓ User-defined requirement types
- ✓ User-defined attributes
- ✓ User-defined filters (views)
- ✓ User defined packages

Rational RequisitePro - ClassicsCD Web Shop - [FEAT: Sorted by Priority and Difficulty]

Requirements:	Priority 1 - HIGHEST	Difficulty 2 - HIGHEST	Stability	Origin	EnhancementRequest
FEAT13: Web Interfaces Compliance ClassicsCD applications must comply with common web user interface such as Microsoft Internet Explorer and Netscape.	High	High	Medium	Hot Line	CL5IC0000033
FEAT15: Interactive Guide The web site will include an interactive guide to the web site.	High	Medium	High	Competitors	CL5IC0000090
FEAT2: Easy Browsing for available titles.	High	Low	High	Hot Line	
FEAT4: Ability to check the status of an order.	High	Low	High	Hot Line	CL5IC0000056
FEAT9: Ability to add/remove offerings.	Medium	High	Medium	Hot Line	
FEAT14: Supported Platform The web application will be supported on all operating systems that are supported by the chosen browsers.	Medium	High	Medium	Hot Line	
FEAT1: Secure Payment method.	Medium	Medium	Medium	Hot Line	
FEAT3: Search capabilities.	Medium	Medium	Medium	Partners	CL5IC0000032
FEAT5: E-mail notification for customers when new titles are added that may be of interest to them.	Medium	Medium	Medium	Hot Line	
FEAT6: Highly Scalable to include many titles and	Medium	Medium	Medium	Large Customers	

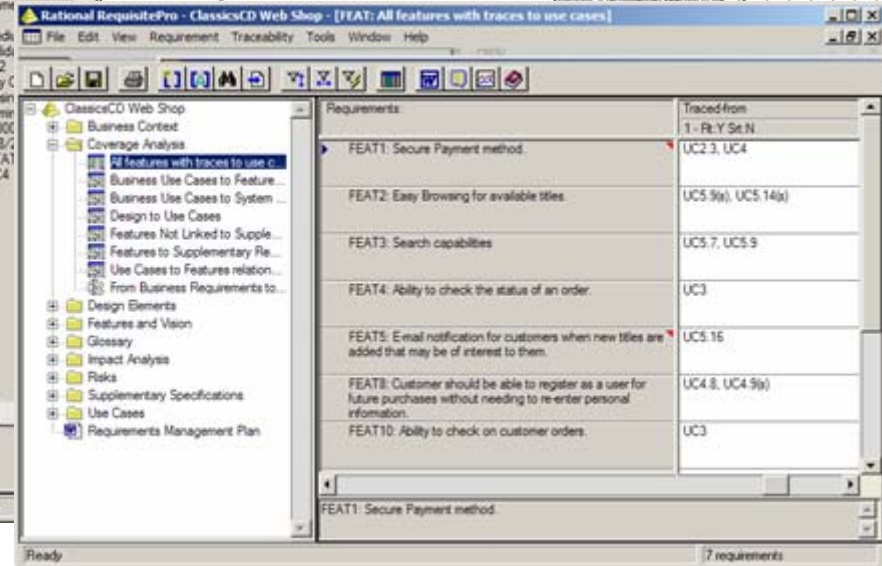

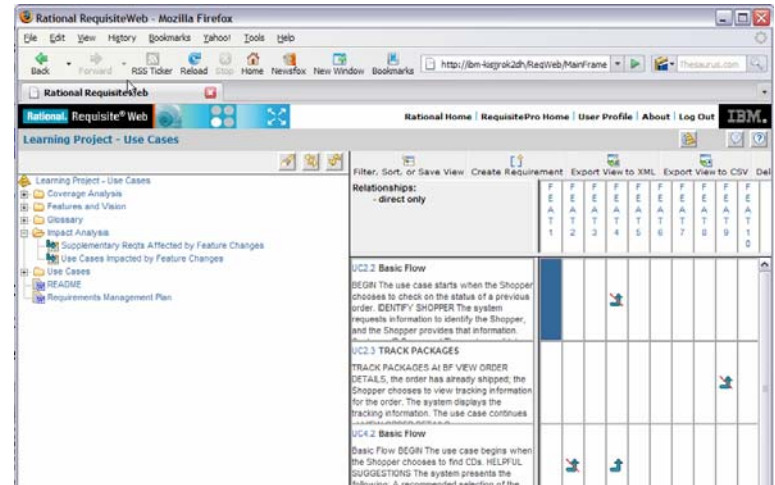

Ready (15 requirements)

Managing Changing Requirements

Traceability

- ✓ Graphical trace matrix
- ✓ Textual trace matrix
- ✓ Graphical trace tree

Integration - Rational Software Architect/Modeler

The screenshot displays the IBM Rational Software Architect/Modeler interface. The main window shows a Use Case Realization diagram titled "Buying and Selling Analysis Level Use-Case Realizations". The diagram illustrates the relationships between actors and use cases:

- Buyer** (Actor) is associated with **Browse Auction Catalog** (Use Case) and **Bid on Item** (Use Case).
- Seller** (Actor) is associated with **Bid on Item** (Use Case).
- Browse Auction Catalog** (Use Case) is associated with **Bid on Item** (Use Case).

The diagram uses a central blue oval for "Bid on Item" and grey ovals for "Browse Auction Catalog" and "Seller". Lines with the number "1" at each end represent the associations.

Below the diagram, the "Requirement Trace" view is visible, showing a list of requirements and their properties:

Requirement	Property	Priority	Status	Difficulty	St...
UC1.2:1 BID: The system presents options available to the	Name		Incorporated	Medium	Mi
FEATS A registered Buyer should be able to place bids	Brief Description		Incorporated		
NEED2 Buyers need to be able to quickly find items	Basic Flow		Incorporated		Hi
NEED3 Buyers need an easy way to pay for items.	Basic Flow		Incorporated		Hi
UC1.2.1 BID: The system presents options ...	Basic Flow	High	Incorporated	Low	Hi
UC1.2.2 ENTER AMOUNT: The Buyer enters ...	Basic Flow	High	Incorporated	Low	Hi
UC1.2.3 BUYER CONFIRMS BID: The system...	Basic Flow	High	Incorporated	Low	Hi
UC1.2.4 POST BID: The system posts the bi...	Basic Flow	High	Incorporated	Medium	Hi
UC1.2.5 SEND EMAIL: The system sends an ...	Basic Flow	Low	Incorporated	High	Hi
UC1.2.6 SYSTEM CONFIRM BID: The system...	Basic Flow	High	Incorporated	Low	Hi

Questions & Answers

Which features are covered by the "Bid on Item" use case?

Which components realize the "Bid on Item" use case?

See Traceability Information in Requirement Trace View

Integration – Rational ClearQuest Test Manager

Tag	Requirement	Configured TC	Verdict	Defect Id	Defect Heading	Defect Priority	Defect State
+FEAT12	The Buyer should be able to cancel his/her own bid before the bid is accepted.	AUCT00000180	fail	AUCT00000191	Cancel bid function does not actually cancel build	1-Resolve Immediately	Submitted
+FEAT2	The Seller should be able to create an auction by describing an item or service	AUCT00000184	fail	AUCT00000200	Auction not accepting reserve bids	2-Give High Attention	Closed
+UC4.2	Register Basic Flow	AUCT00000168	fail	AUCT00000199	System lets you register multiple accounts with same login	1-Resolve Immediately	Submitted

RequisitePro feature requirements

Test cases

Defects

Questions & Answers

Do we have tests to verify the Register Basic Flow use case?

Which features are not available until we fix the "Auction not accepting reserve bids" defect?

Gaining Control of Your Constantly Changing Requirements

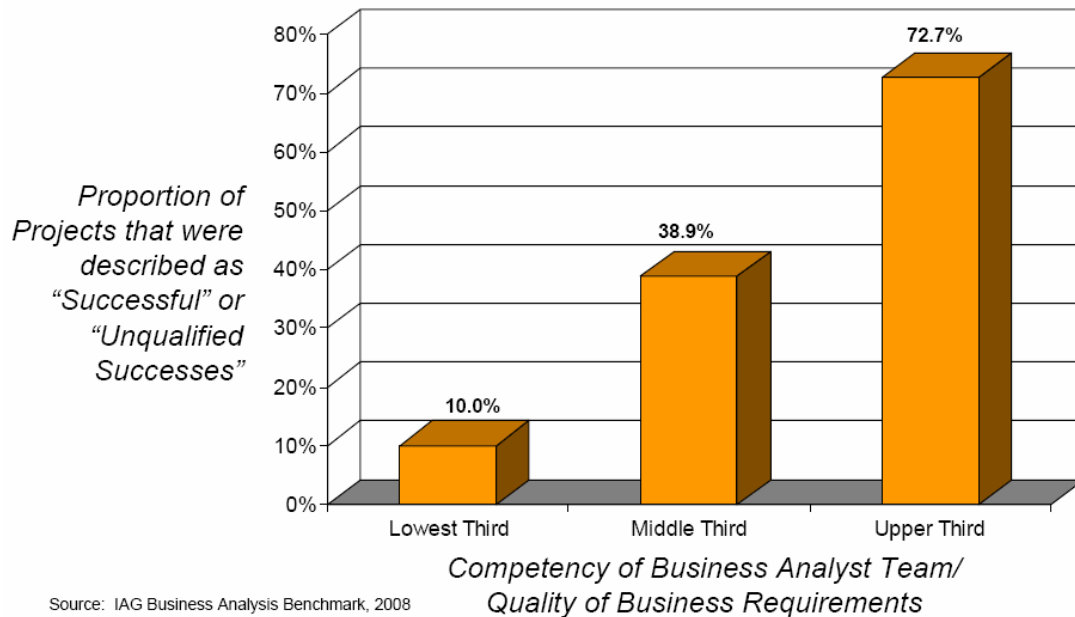

- The reality: requirements change
- Planning for requirements management
- Automating requirements management
- People, processes and technology
- Looking into the (near) future
- Summary

Automation is not the *entire* answer...

SUCCESS PROBABILITIES

Successful requirements management is also about the skill and experience of the people managing requirements

IBM Software Services for Rational

- *A Global network of highly skilled experts with broad architectural knowledge, deep technical skills and best practices expertise working with IBM Rational clients to*
 - ▶ *Help automate, integrate and govern the core business process of software and systems delivery with worldwide support.*
 - ▶ *Accelerate the deployment of Rational software, helping to minimize risks, and maximize investments to meet business goals*
 - ▶ *Offers a variety of services to help clients define and improve software development best-practices for their organization*

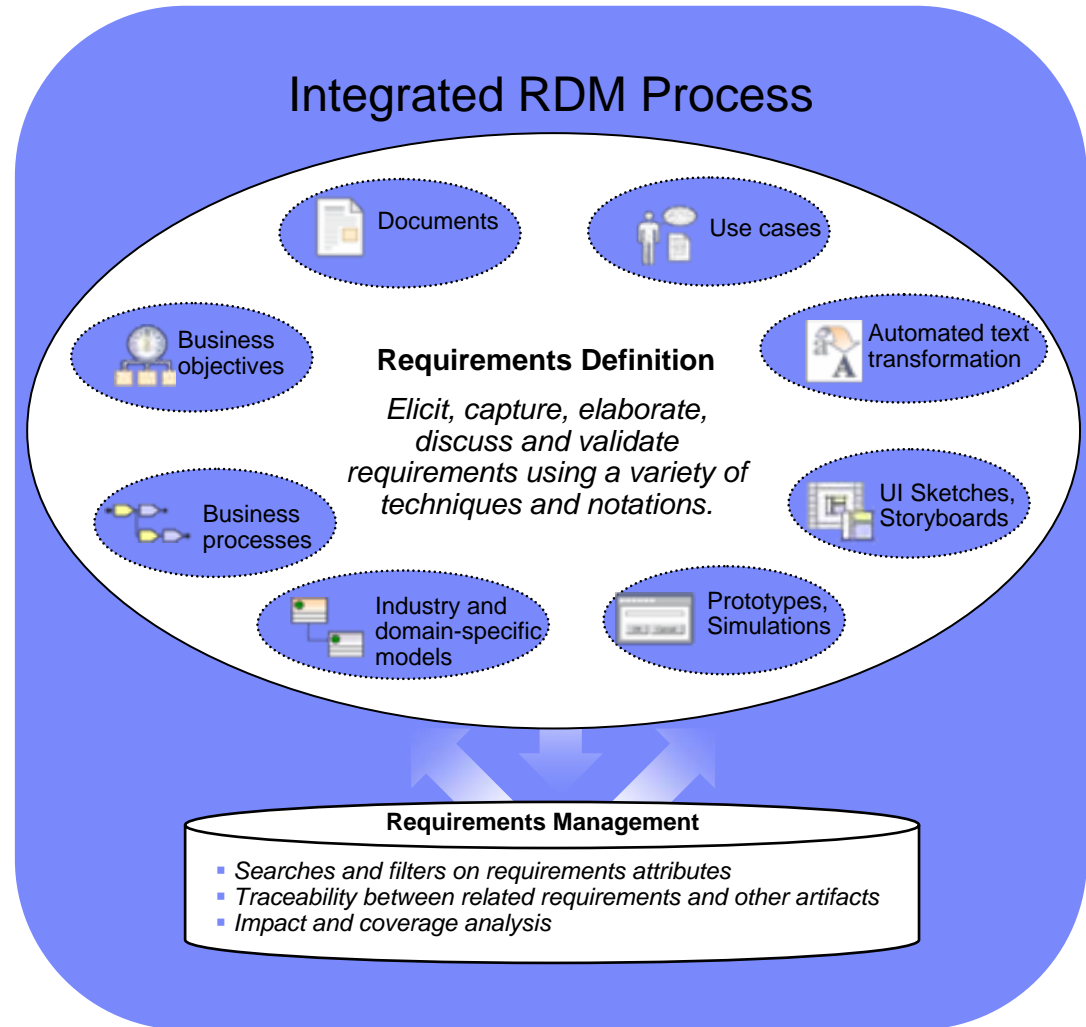

Gaining Control of Your Constantly Changing Requirements

- The reality: requirements change
- Planning for requirements management
- Automating requirements management
- People, processes and technology
- Looking into the (near) future
- Summary

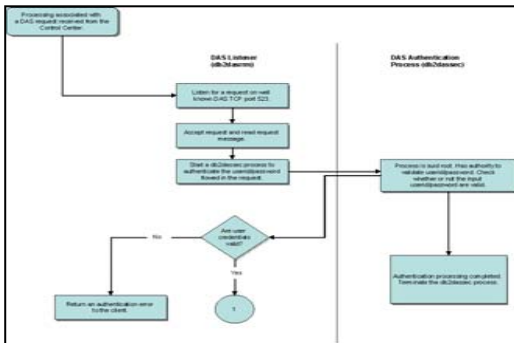

Requirements Definition and Management (RDM)

- More ways to elicit, discover, and specify requirements
- Elaborate and validate thoughts so that better requirements are managed
- *Definition* makes what you *manage* more valuable

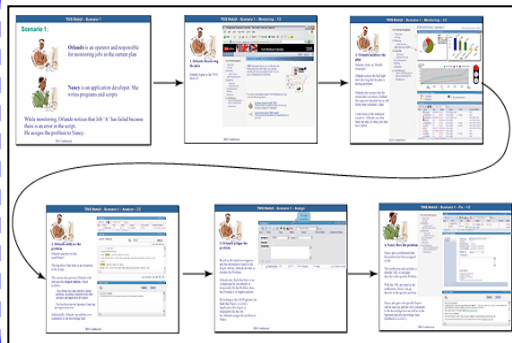

Elicit, capture, elaborate, discuss and validate

Business Process Diagrams

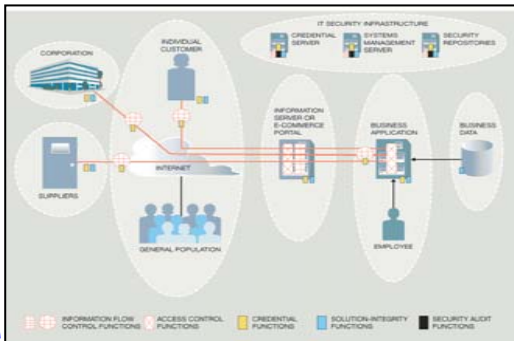

Storyboards

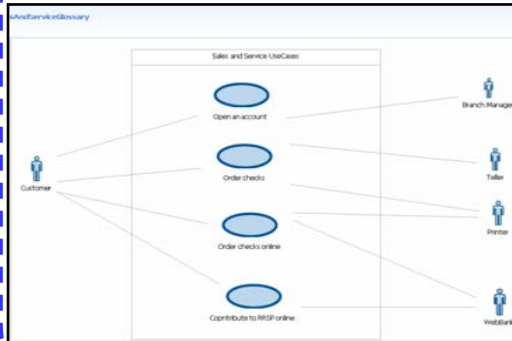

UI Sketching

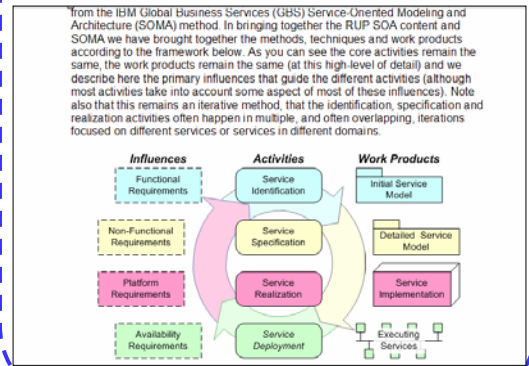

Sketches / Visuals

Use cases

Rich Content Capture / Share

Emphasis on requirements definition can reduce the impact of requirements change

- Challenges** in aligning business and IT around a shared understanding of the problems and desired solutions is a driving factor of project failures in many organizations. Uncertainty, driven by **perception, knowledge, and communication gaps** during the requirements process, materializes in downstream processes as **delays and rework**.
- Organizations need to **collaborate in context** to bridge these gaps. RUP guides teams through the use of **powerful, yet simple, tools for eliciting, enhancing, and connecting ideas**, confusion and rework is reduced, allowing teams to reduce downstream risks and speed time to market.

Perception

Knowledge

Communication

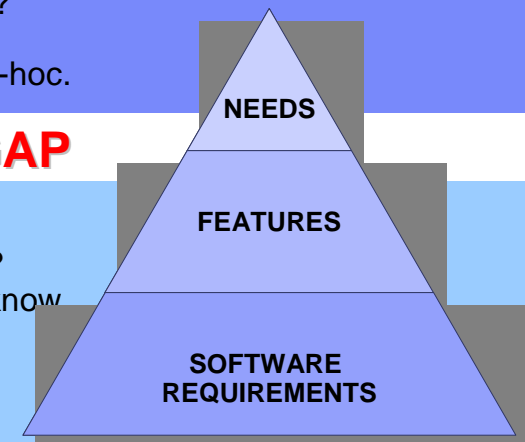

Problem Space

Are we solving the right problem?
Where we know what we know.
Frequently discontinuous and ad-hoc.

GAP

Solution Space

Are we solving the problem right?
Results linked to who / what we know
Structure accelerates issues

IBM Rational and Telelogic

More information coming soon

- IBM completed its tender offer for Telelogic A.B. on April 3rd
- We will preserve client investments in both Telelogic and IBM Rational solutions
- We will support two complementary approaches to Requirements Management
 - ▶ Telelogic DOORS will continue to be the solution of choice for customers who develop complex technical systems and demand a highly scalable solution well-suited for strongly governed projects
 - ▶ Rational RequisitePro will remain the basis of our solution for software and IT projects with need for agility and tight integration with software development and testing tools

Gaining Control of Your Constantly Changing Requirements

- The reality: requirements change
- Planning for requirements management
- Automating requirements management
- People, processes and technology
- Looking into the (near) future
- Summary

Summary

- Requirements change
- Each change poses a number of questions
 - ▶ We must answer these questions to effectively manage the development lifecycle
 - ▶ The requirements management plan provides a blueprint for answering these questions
 - ▶ Traceability is the primary mechanism for finding answers
- The right amount of change control, introduced at the right time, maximizes effectiveness
- Automation isn't the entire answer, but it is key for managing change
- There is an increased emphasis on managing better requirements

IBM Rational Software Development Conference 2008

June 1 – 5, 2008; Orlando, Florida

IBM Rational Software
Development Conference
2008

WHERE TEAMS ARE **R-HEROES**

June 1-5, 2008 • Orlando, Florida

SAVE
THE
DATE!

CONFERENCE HIGHLIGHTS:

- Over 3,000 customers and partners
- Over 300 sessions – 14 tracks
- Executive Summit 2008
- 3- and 5-hour Technical Workshops
- Access to IBM Engineers and IBM Research
- Keynotes with industry-leading experts
- Exhibit hall showcasing complimentary product and services
- Unlimited networking opportunities
- IBM Solution Center
- Interactive Birds-of-a-Feather Sessions

Backup

Challenge – Too Many Requirements Errors

- Challenge
 - ▶ Team members don't have a requirements process, they don't know where the latest requirements are, and they find it difficult to understand a big list of shall statements.

- Resolution
 - ▶ Have secure central requirements repository accessible on a local network or over the internet
 - ▶ Support alternate types of requirements like use cases, features, and user stories
 - ▶ Provide best practices and process guidance

Challenge – Hard to Organize and Report on Requirements

▪ Challenge

- ▶ There is no consistent organizing principle and it is very difficult to sort or filter requirement based on information like priority and release.

▪ Resolution

- ▶ Document types and associated templates provide guidance
- ▶ Requirement types provide structure.
- ▶ Requirements attributes provide necessary information to sort, search, and filter

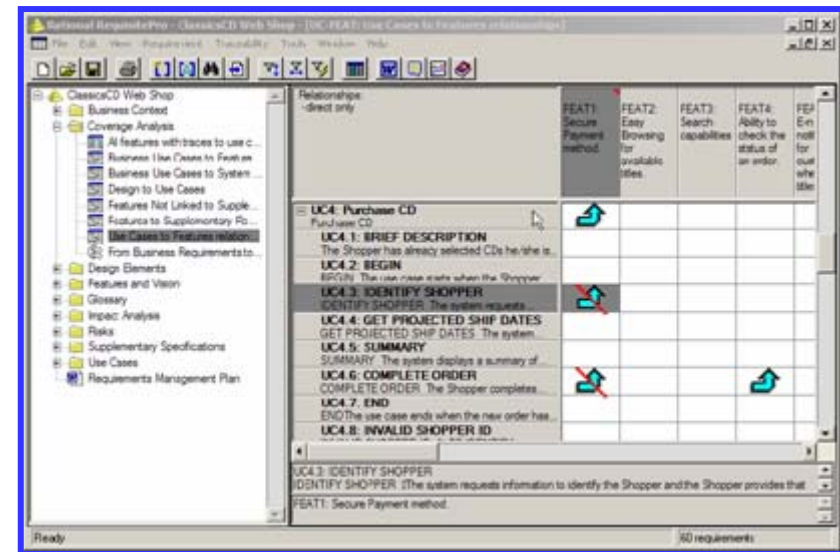

Requirements	Priority	Status
FEAT1 Secure payment method Secure payment method	Should	Approved
FEAT2 Easy browsing Easy browsing for available titles	Should	Approved
FEAT3 Search by multiple criteria Ability to search for CDs by multiple criteria	Must	Approved
FEAT4 Ability to check status of an order Ability to check the status of an order	Should	Approved
FEAT5 E-mail notification of new titles of interest E-mail notification for Shoppers when new titles that may interest them are added to the collection.	Could	Approved
FEAT6 Highly scalable Highly scalable to include many titles and effective searching through those titles	Must	Approved
FEAT7 Ability to customize the Web site Shoppers should be able to customize the Web site.	Should	Approved
FEAT8 User registration good for future purchases Shoppers should be able to register once for all purchases; they should not be asked to re-enter personal information.	Should	Approved
FEAT9 Shipping Status Shoppers should be able track any package that has been shipped to them.	Should	Approved
FEAT10 Ability to add/remove offerings Ability to add/remove CDs available for sale	Should	Proposed
FEAT11 Ability to check on customer orders Ability to check on Shopper orders	Must	Incorporated

Challenge - Change Not Managed

- Challenge
 - ▶ Team members don't know what has changed over time. They have no way to understand what the impact of a change will be.

- Resolution
 - A requirements audit trail (history) provides a record of all changes.
 - Traceability and suspect links provide visibility into change impact
 - Automatic notification of revisions to requirements

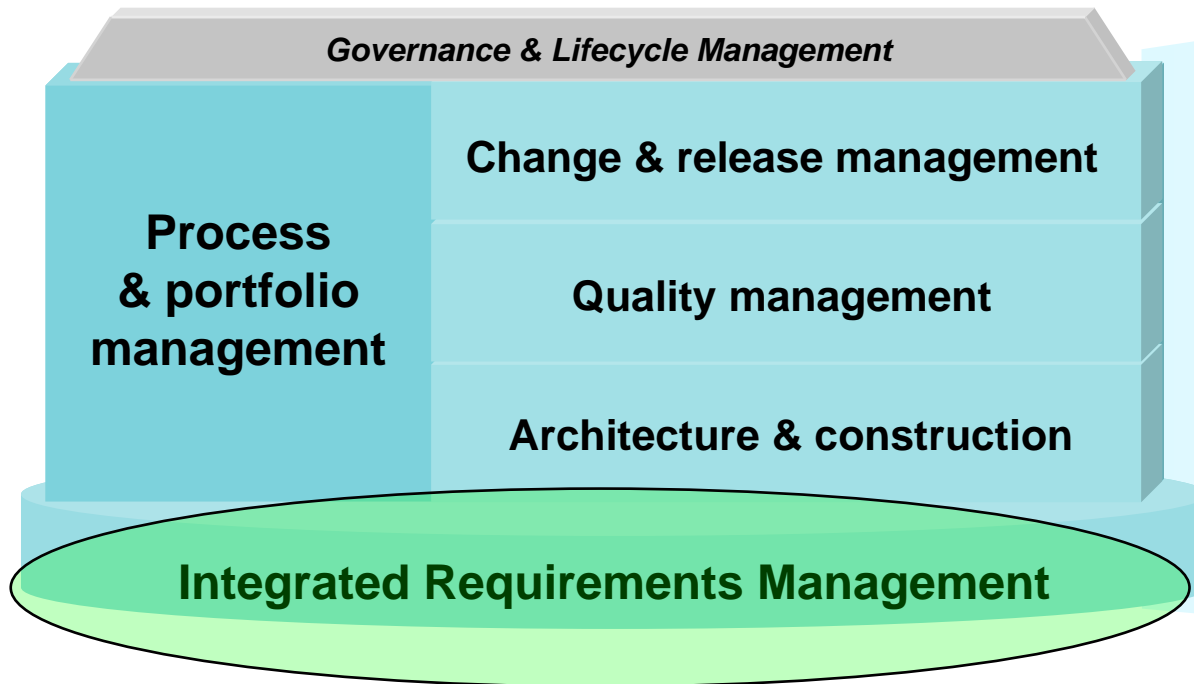

IBM Rational Software Delivery Platform

Integrated Requirements Management

Requirements add little value unless they are used in the planning and development of the software

- ✓ Requirements are integrated within all parts of the software development process

- ✓ Ensure that applications meet business needs by tracing to business process models
- ✓ Understand the impact of a change via full lifecycle traceability
- ✓ Verify quality by linking requirements to test cases
- ✓ Understand status, resources, cost, return, and other financial assessments associated with requirements

Integrated Requirements Management

Create and manage software requirements and use cases

Rational RequisitePro

Requirements Analyst

Create business process models and business requirements

*WebSphere Business Modeler
Rational RequisitePro*

Business Analyst

Develop data and architectural models from business process models and software requirements

*Rational Software Architect
Rational Data Architect*

Architect

Link requirements with project plans, financials and status

Rational Portfolio Manager

Project manager

Use models and requirements to write code

Rational Application Developer

Developer

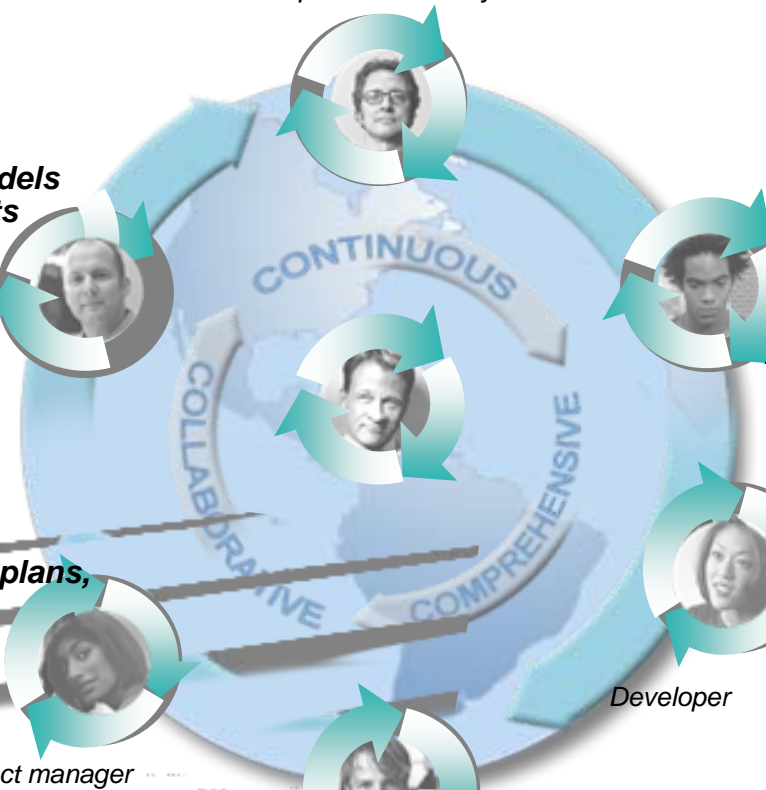

Use requirements and use cases to create test cases

Tester

Ready For Rational Partner products

All RequisitePro Integrations

Product	Capability
IBM Rational Software Architect	Draw use case diagrams; link requirements to design elements and code.
IBM Rational Software Modeler	Draw use case diagrams; link requirements to design elements.
IBM Rational ClearQuest	View requirements; trace enhancement requests to requirements; trace test assets to requirements.
IBM WebSphere Business Modeler	Trace business model elements to business and system requirements.
IBM WebSphere Integration Developer	View and link requirements for SOA application development and other integration projects.
IBM Rational Application Developer	View requirements from within IDE: trace requirements to code.
IBM Rational Systems Developer	Manage and trace requirements for complex systems.
IBM Rational Data Architect	Collect data requirements; trace data base designs to requirements.
IBM Rational Portfolio Manager	Associate work, financials, status to requirements.
IBM Rational Test Manager	Trace test cases to use cases and other requirements.
IBM Rational Unified Process	In-context process help from within RequisitePro.
IBM Rational SoDA	Generate integrated reports.
Raven Professional	Process descriptions within RequisitePro automatically visualized as activity diagrams.
iRise Studio	Define requirements in iRise by prototyping, and manage them in RequisitePro.

IBM Rational's business model

A strategic partner in enabling business innovation & transformation
