

IBM z990/z890 CHPID Mapping Tool

John Hughes

**IBM Washington Systems Center
Gaithersburg, Maryland. USA**

Mapping Tool-General

IBM Washington
Systems Center

- Java™ based Standalone application
- Sessions can be saved to allow for interruptions
 - Also good for documentation
- Currently available for z900/z800/z990/z890 at IBM Resource Link™ site
 - www.ibm.com/servers/resourcelink
- One tool for z800/z900/z990/z890

More than just an option for z990/z890.....

- Helps assign CHPIDs to ports
 - CHPIDs in IOCP Input File for availability mode
- Creates a mapping file (trm file) used to assign CHPIDs to ports during machine installation
- Generates reports to help with cabling
 - CHPID Report with frame layouts
 - FQC report
 - Control Unit reports
- Could accept default CHPIDS and change HCD
- Does not help creating/consolidating IOCP Input Files

- No default CHPIDs
- Helps assign PCHIDs to CHPIDs in IOCP Input File
- Updates z990/z890 IOCP Input File with "PCHID" keyword
- Generates reports to help with cabling
 - CHPID Report with frame layouts
 - FQC report
 - Control Unit reports
- Does not help creating/consolidating IOCP Input Files

CHPID Mapping Tool-Changes From Earlier Versions

IBM Washington
Systems Center

- Supports CFReport, in addition to current hardware config file obtained from Resource Link (.hwc file)
 - Highly recommended that the .hwc file be used
 - Good for tool familiarization and planning
- z900/z800 code merged with z990/z890 code
 - One tool
- Tool version + CCN in the title bar
- Append .txt to IOCP file if no extension supplied
- File overwrite check while creating IOCP Input File
- HTML page break while printing (will print each of the frames on new page while printing CHPID Report)
 - (May work only while printing from IE)
- "Create Updated IOCP File" instead of "Export"

Inputs-z900/z800

IBM Washington
Systems Center

- Valid z900/z800 IOCP Input File for availability mode
 - Not required for manual mode
- Hardware Configuration File (HWC) for the order (CCN) or CFR file
 - Available at Resource Link
 - CFRReport from e-config

Inputs-z990/z890

IBM Washington
Systems Center

- Valid z990/z890 IOCP Input File for both manual or availability modes
 - With no "PCHID" keywords or with "PCHID" keywords
- Hardware Configuration File (HWC) for the order (CCN) or CFR file
 - Available at Resource Link
 - CFRReport from e-config

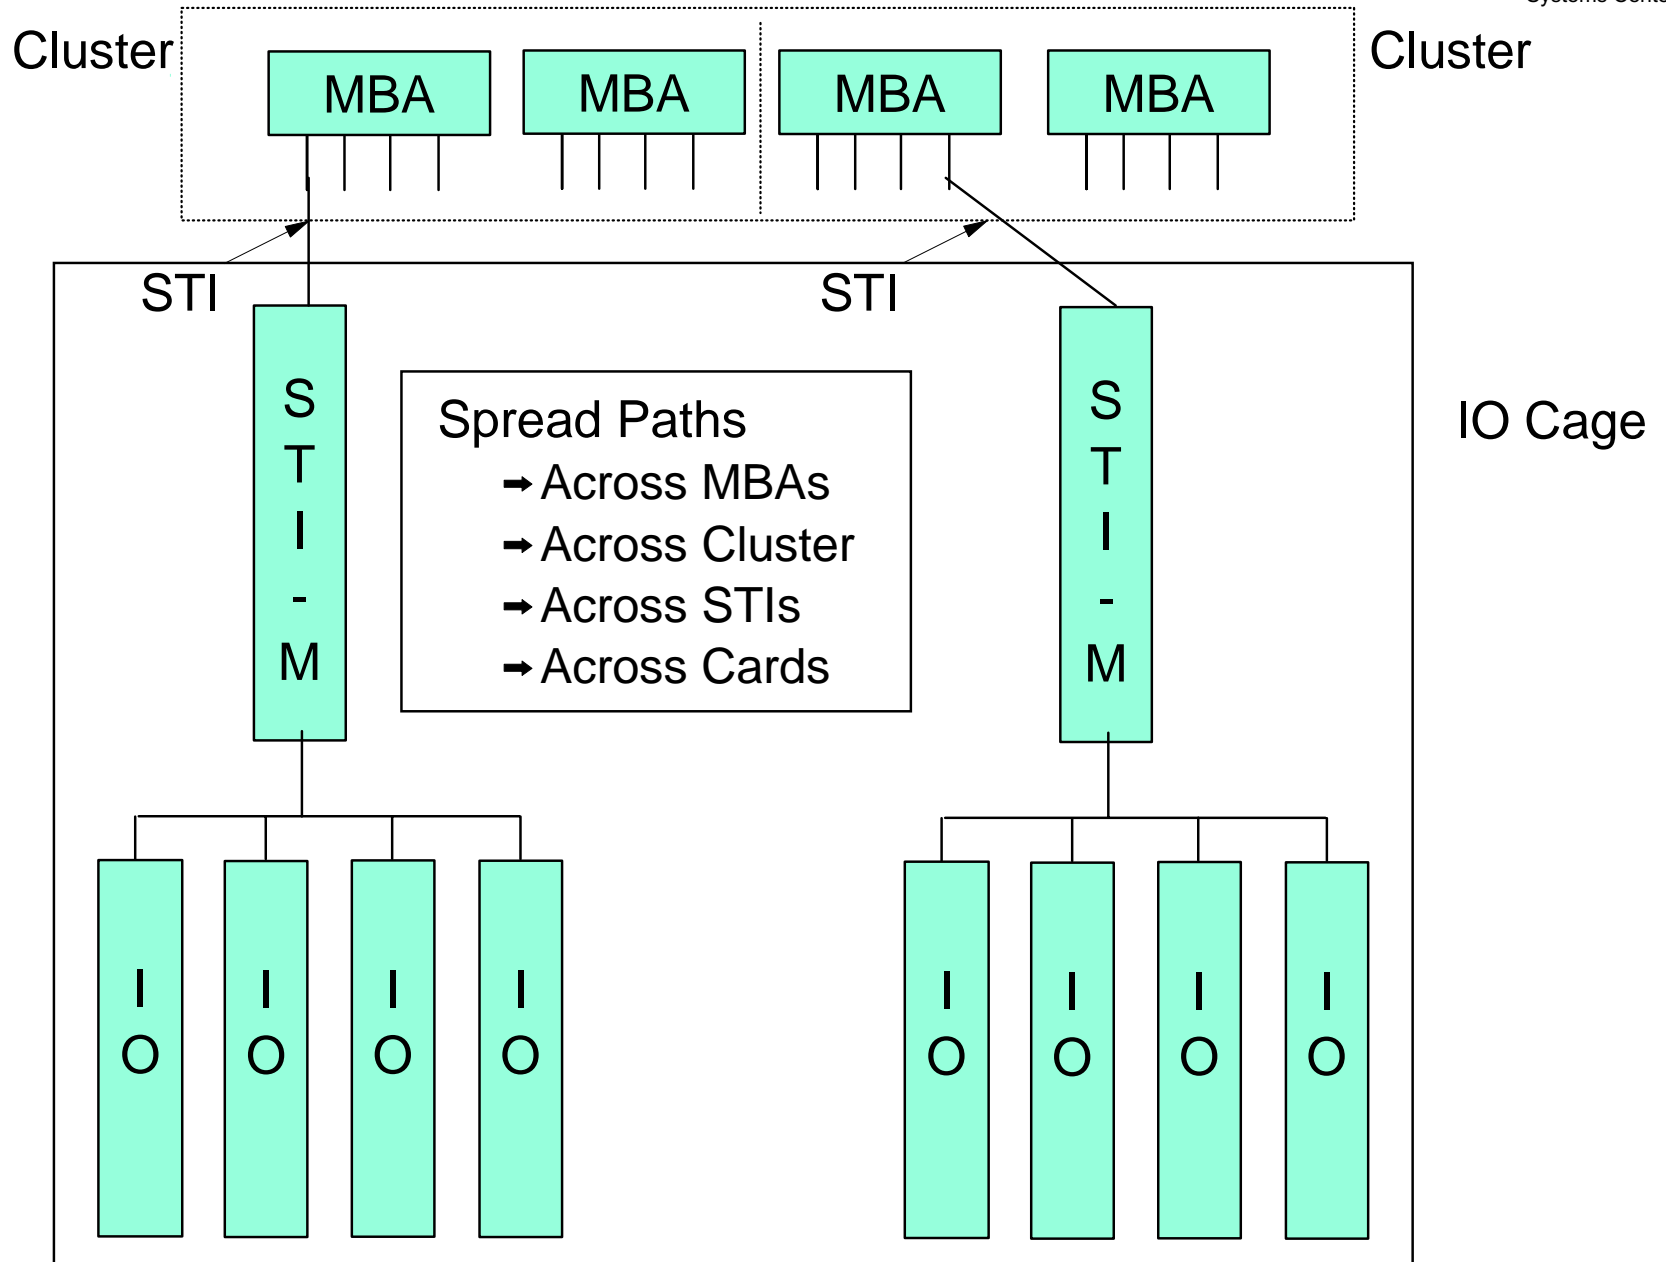

- Manual remap feature
 - z990/z890: assign CHPIDs to PCHIDs
 - z900/z800: assign CHPIDs to ports
- Availability
 - z990/z890: assigns PCHIDS based on Control Unit priority
 - z900/z800: assigns CHPIDs to ports based on ControlUnit priority
- For z990/z890, can preserve existing PCHID/CHPID
 - PCHID to CHPID assignment stored in IOCDs
- For z900/z800, **only** used for initial install
 - Mapping stored in trm file on diskette
 - CCN data can be specially loaded for an MES in some cases that may require it
 - ◆ Contact John Hughes at the WSC (jjhughes@us.ibm.com)

Switch allowed between two modes

z900/z800 Availability Mapping- Goal

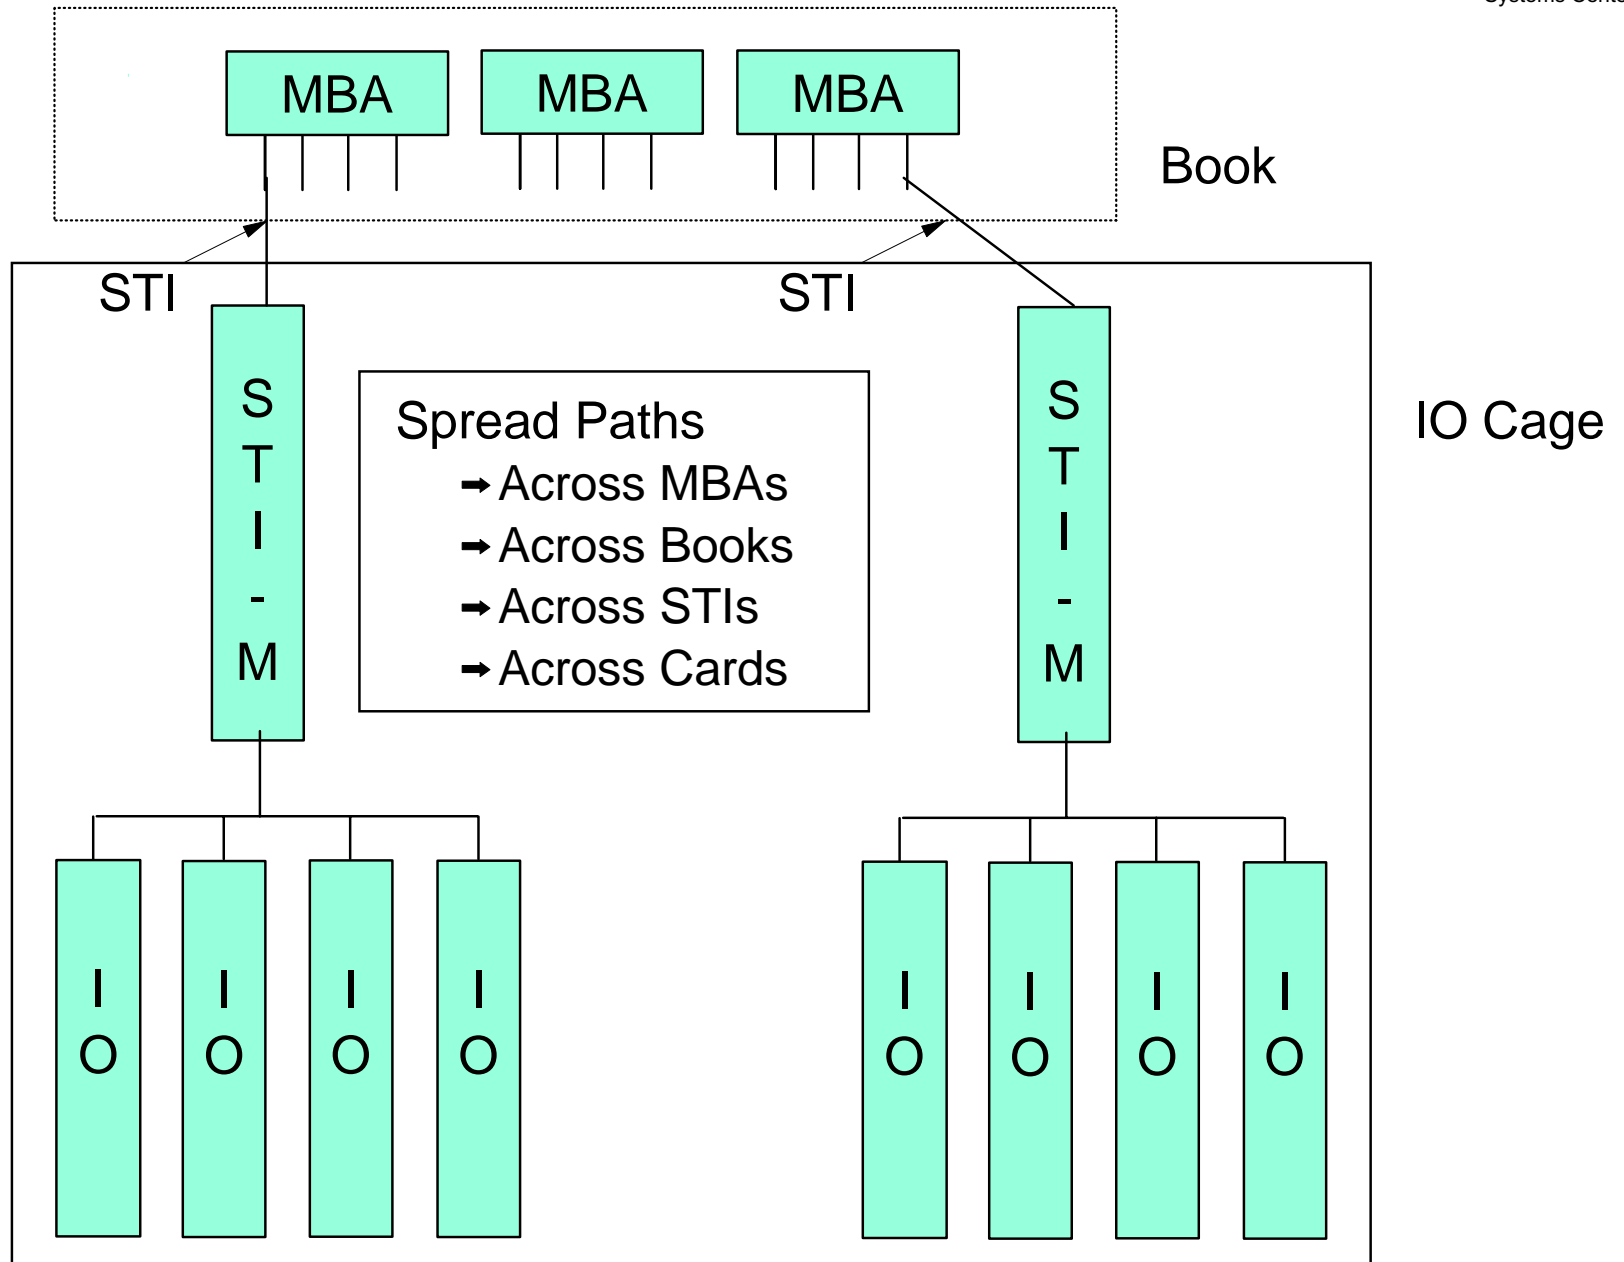

IBM Washington

z990/z890 Availability Mapping- Goal

IBM Washington
Systems Center

Availability Mapping - Control Unit Priorities

IBM Washington
Systems Center

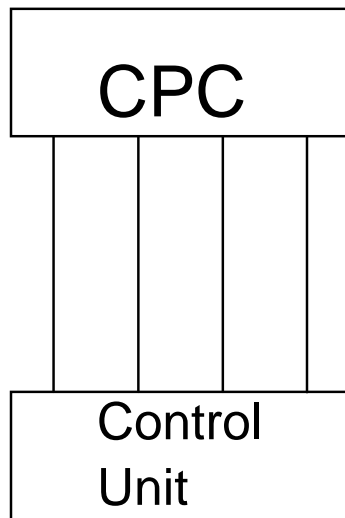

- "Priority" was a bad term to choose
 - Has nothing to do with the importance
 - Is only used within the mapping tool
 - Is really the order of processing
 - ✓ Which control unit's CHPIDs get mapped first, second, etc.
 - ✓ Law of diminishing returns applies
- Considerations
 - Grouping of multiple control units
 - ✓ Treat all of the CHPIDs as a single entity
 - Daisy chained Control Units
 - ✓ Need only prioritize the first one that has all the CHPIDs.

Example 1- Multiple Control Units Given Same Priority

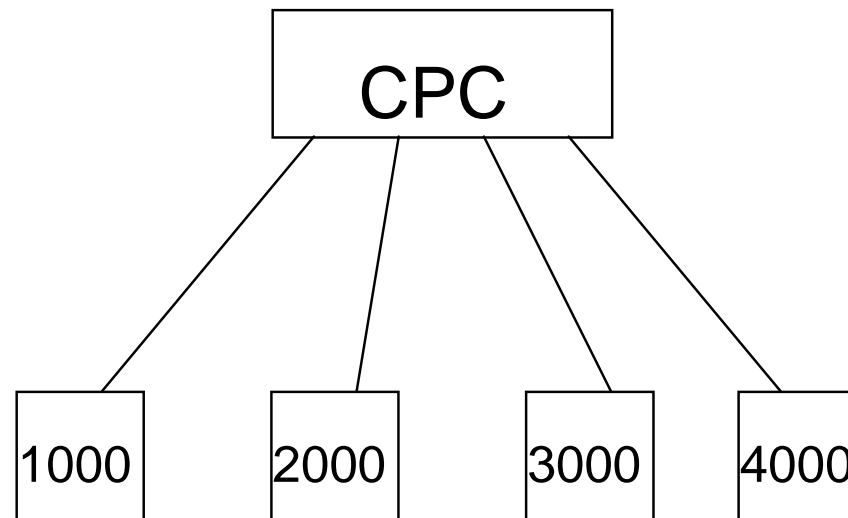

IBM Washington
Systems Center

Physical

Logical

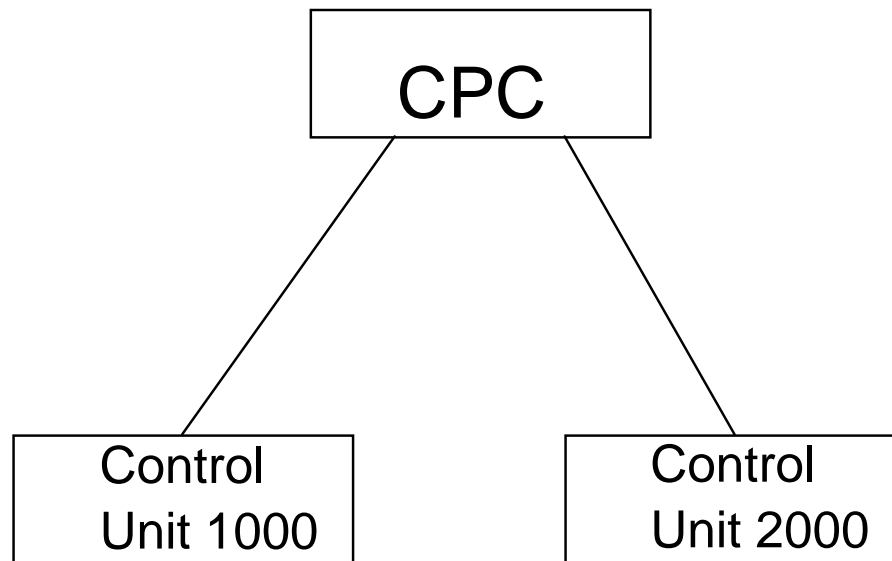

- Same priority assigned to 1000,2000,3000,4000
 - Same physical control unit but multiple CNTLUNIT defs

Example 2- Multiple Control Units Given Same Priority

IBM Washington
Systems Center

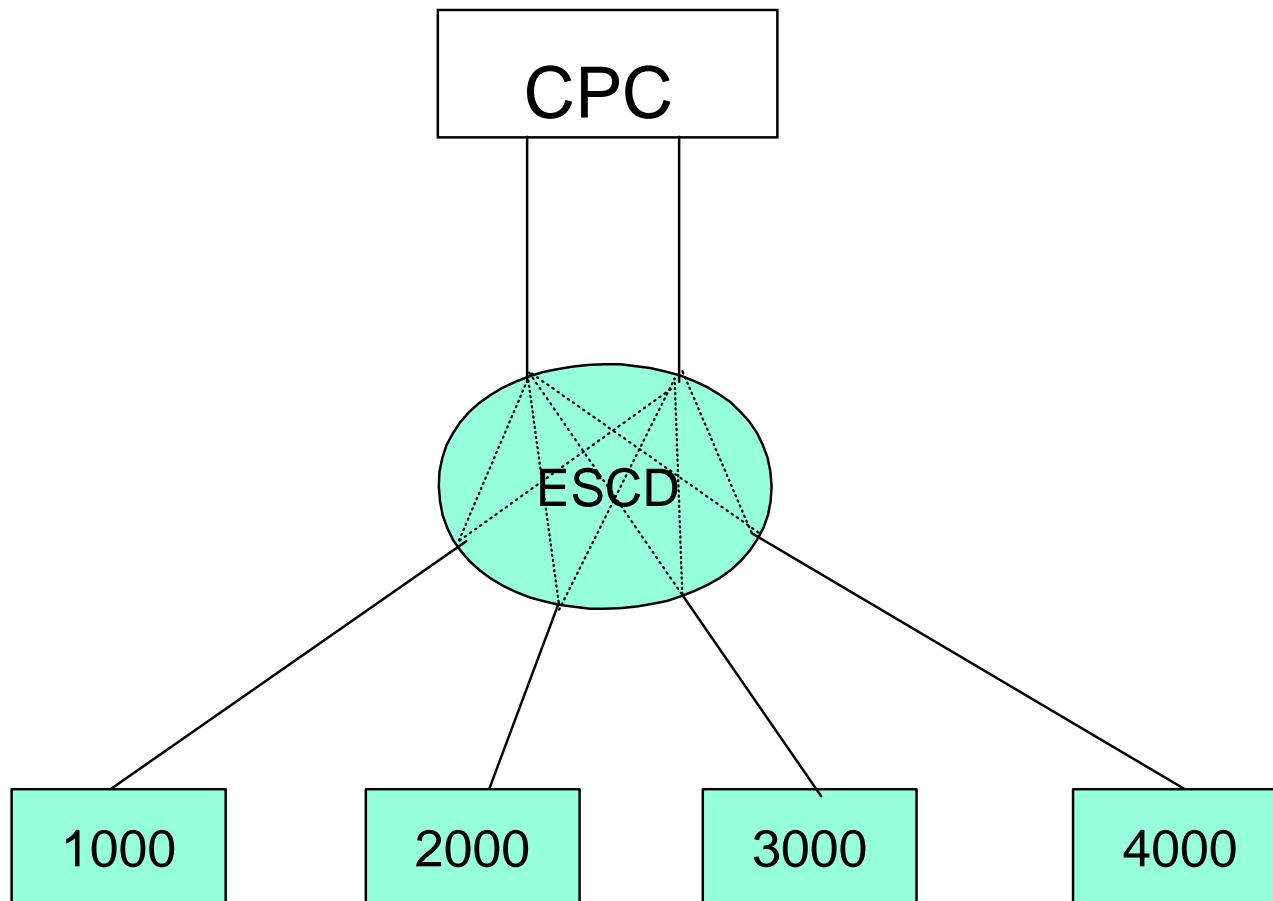

- Same priority assigned to 1000,2000
 - Master and Alternate Console Controllers
 - Critical Tape Devices
 - DASD strings with multiple control unit definitions
 - etc.

Example 3- Multiple Control Units Daisy Chained

IBM Washington
Systems Center

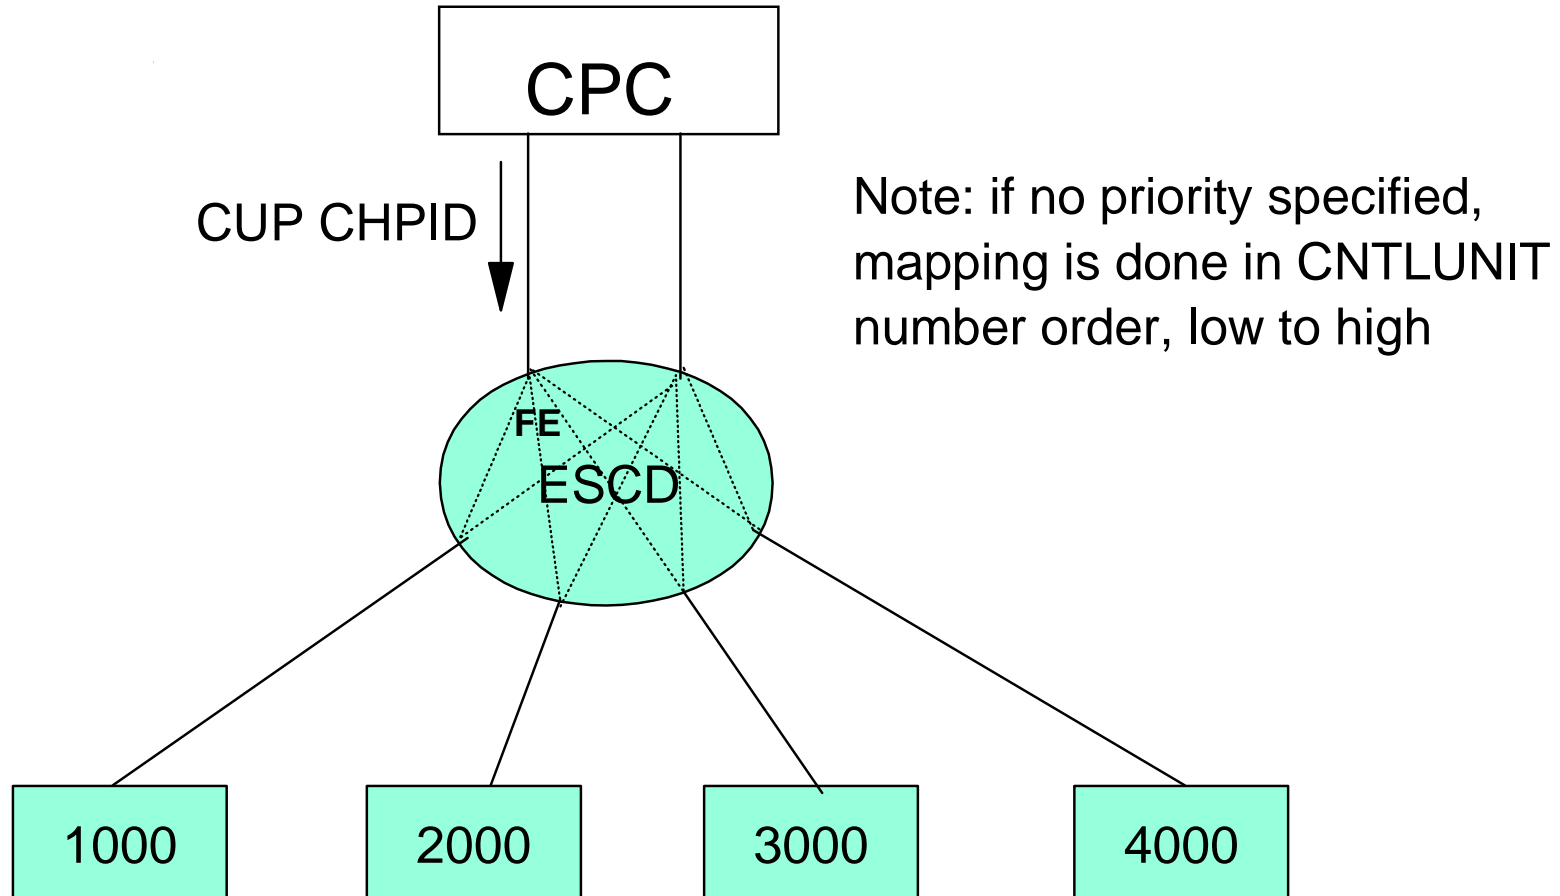

- Only need give a priority to 1000
 - CHPIDs spread for 1000 will apply for the others

Example 4- Availability Mapping and use of CUP

IBM Washington
Systems Center

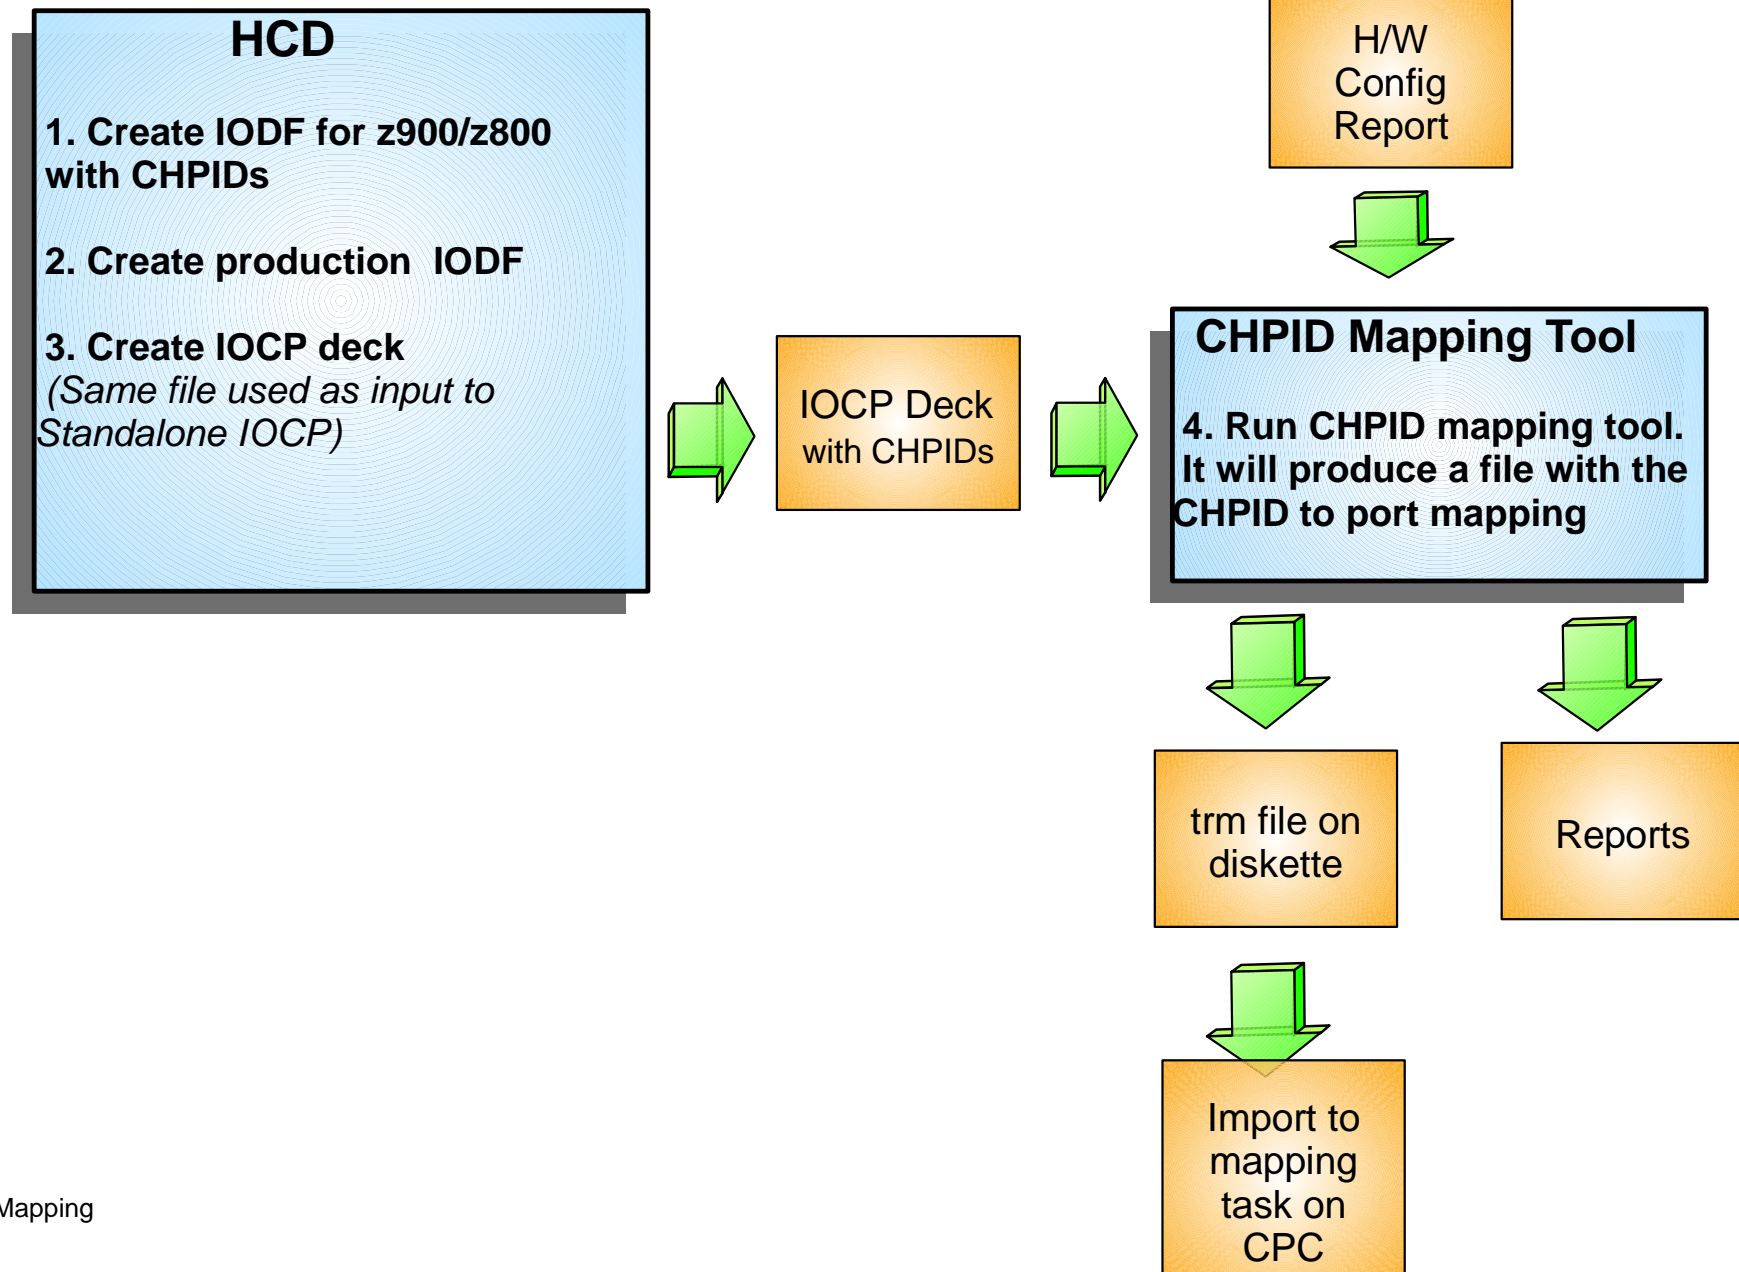

- Defining a CUP will generate a CNTLUNIT for the director
 - Will "piggy back" on existing path(s)
- Availability Mapping should always include priorities
 - Don't prioritize the CUP CNTLUNITs

z900/z800: Assigning CHPIDs to Ports (Availability)

IBM Washington
Systems Center

z900/z800: Assigning CHPIDs to Ports (Manual)

IBM Washington
Systems Center

HCD

1. Create IODF for z900/z800 with CHPIDs
2. Create production IODF
3. Create IOCP deck
(Same file used as input to Standalone IOCP)

H/W
Config
Report

CHPID Mapping Tool

4. Run CHPID mapping tool and assign CHPIDs to ports. It will produce a file with the CHPID to port mapping

trm file on
diskette

Reports

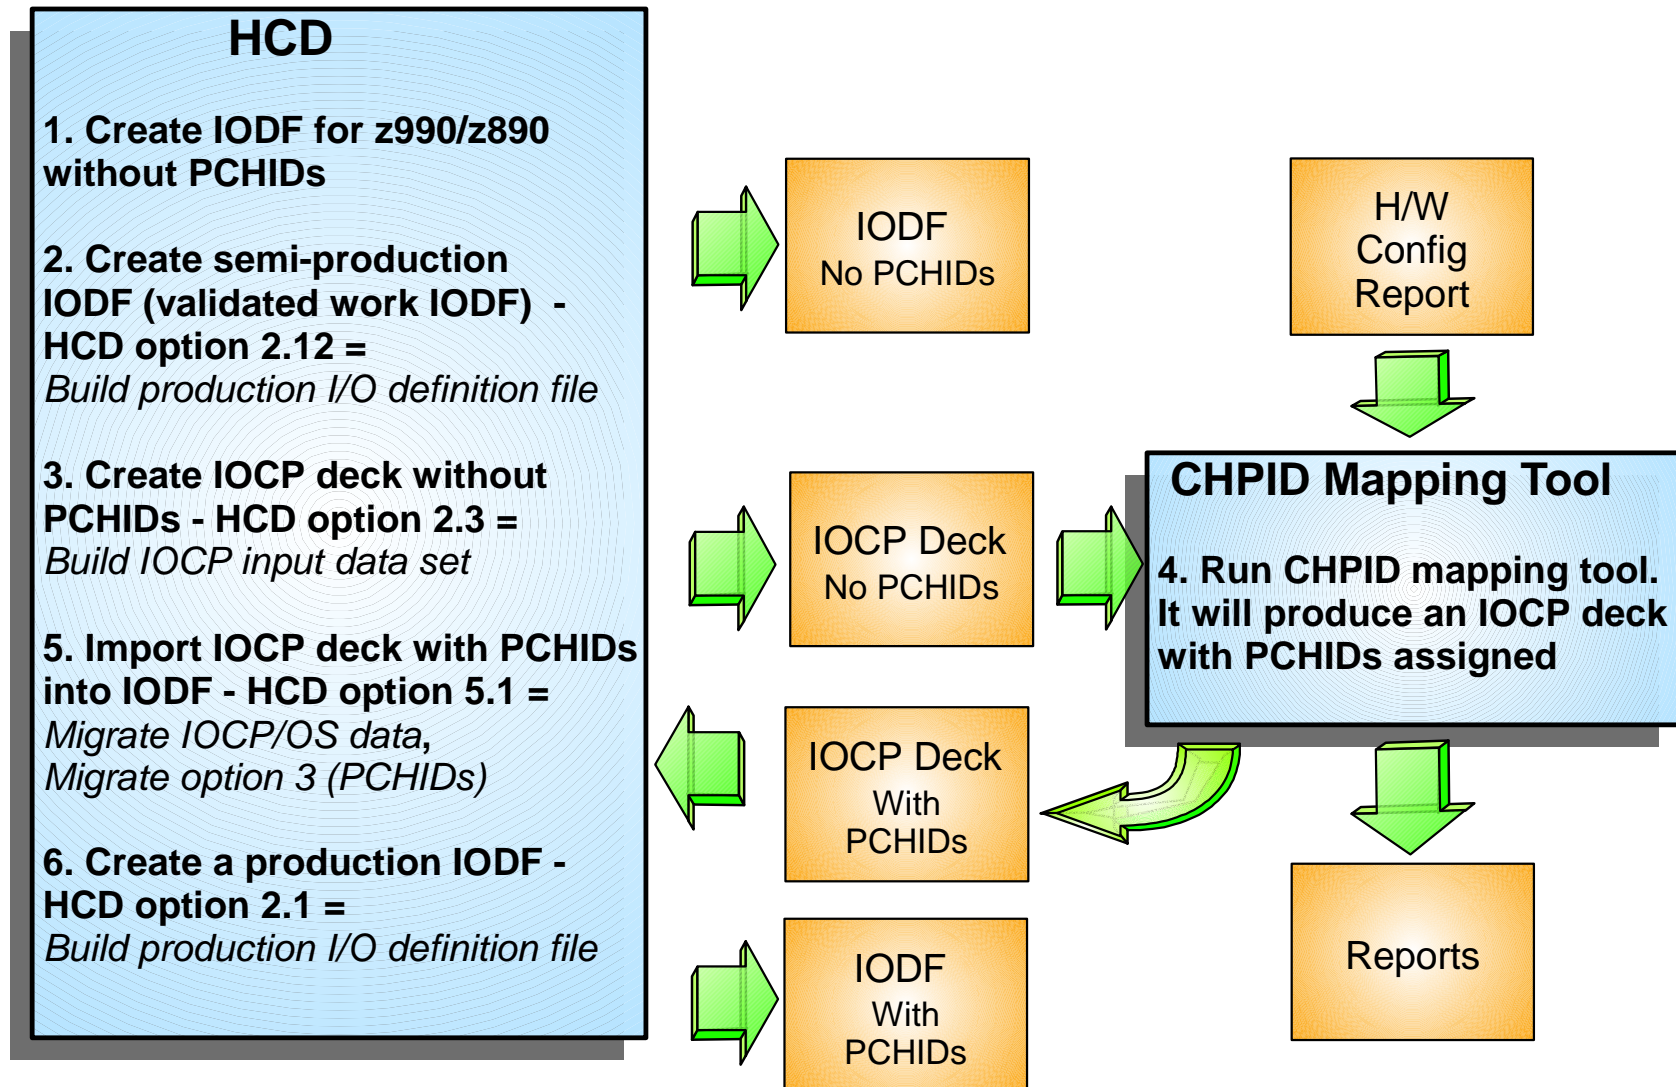

Import to
mapping
task on
CPC

z990/z890: Assigning PCHIDS

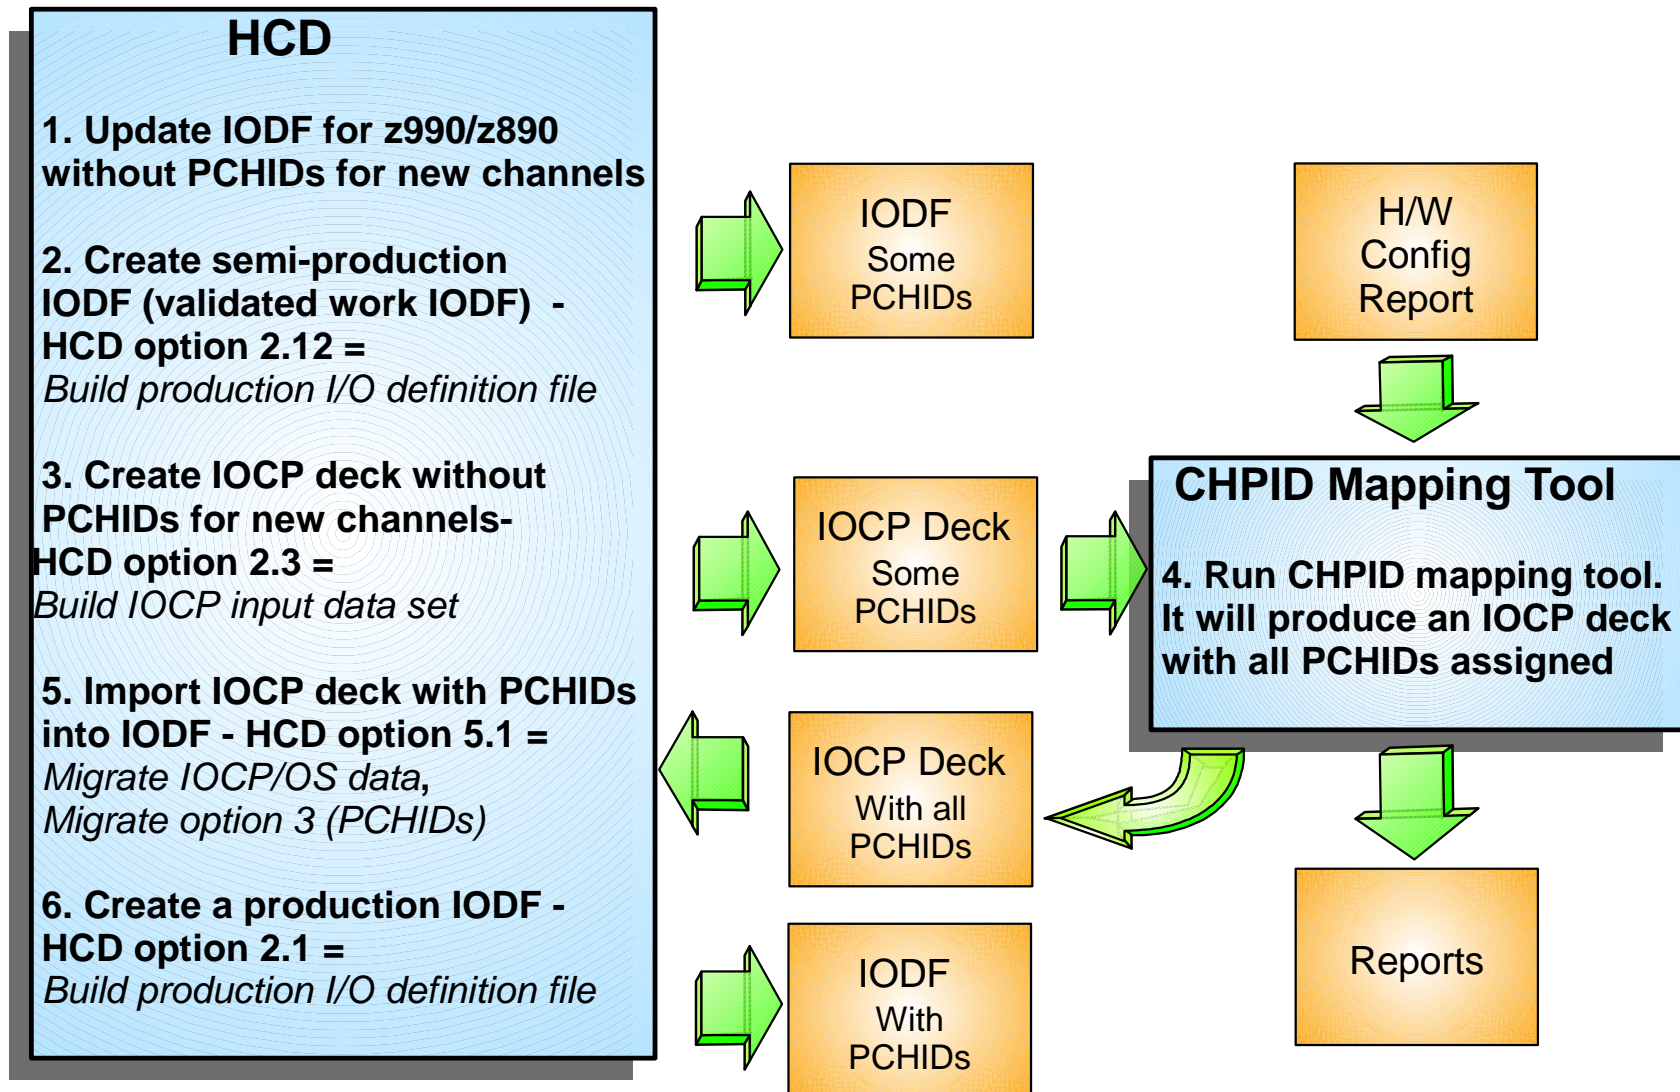

IBM Washington
Systems Center

z990/z890: Assigning PCHIDS for an MES

IBM Washington
Systems Center

z990 WARNING!

IBM Washington
Systems Center

At the point the IOCP is downloaded from HCD for input to the mapping tool, HCD and the IOCP file are synchronized by a token. If there are **any** changes made in HCD while using the mapping tool, it will not be possible to migrate the updated output from the mapping tool back into HCD to complete the process.

z990 CHPID Mapping Tool Demo

IBM Washington
Systems Center

IBM Washington
Systems Center

CHPID Mapping Tool - Backup Charts for non-live demo

- File
- Tool
- Sorts
- Reports
- Help
- Load Session (Alt-L)
- Save Session (Alt-S)
- Import H/W Config from file (Alt-F)
- Import CFReport Order file (Alt-C)
- Preferences (Alt-P)
- Update Tool (Alt-U)
- Exit (Alt-X)

Step 1 - Import configuration file (*.hwc or *.cfr) using pull down menu under "File"

Note the comments..

Please load Hardware Configuration/CFReport File using File menu.
