## Requirements

### Operating System BS2000/OSD

Prerequisite for running BS2000 attached to ESS is **BS2000/OSD Version 4.0**.  
ESCON connections only are supported

### Supported BS2000 Server (Hardware)

S1xx-model with ESCON channel	(S/390 based hardware)
SR2000 model with ESCON channel	(RISC-based hardware)

see links at the end of this document for details

### ESS models

All ESS models with ESCON Hostbus adapter are supported

### ESS microcode level

ESS must run with the following microcode level ==> 1.4.1.5 or higher

### ESS Advanced Copy Services

PPRC and FLASHCOPY is supported using ESS Specialist

### Order ESS attached to BS2000

At the moment you need to generate a *RPQ* for your individual customer situation. Please have this done before you place an order for an ESS.  
Generating a *RPQ* is an easy task. You will get all the necessary information at the end of this announcement. As an *EHONE ID* is needed this can be done only by IBM employees

IBM internal questions regarding *RPQ* generation for *SSG* products can be directed to  
Andreas Grottel, [agrottel@de.ibm.com](mailto:agrottel@de.ibm.com), Tel: +49 - 171 22 92 373

Business Partner please talk to your local IBM contact.

ESS can be configured to concurrently support BS2000 servers and other servers that are listed on the ESS Supported Server web site.

# Configuration

## Supported disk types and capacity planning

FSC Type	IBM Type	Cylinders	Capacities in GB			
			MAX	NK4	NK2	K2
D3490-10	3390-1	1113	0,946	0,821	0,718	0,65
D3490-20	3390-2	2226	1,892	1,641	1,436	1,299
D3490-30	3390-3	3339	2,838	2,462	2,154	1,949
D3492	3390-3R *1	3339	2,838	2,462	2,154	1,949
D3490-40	3390-9	10017	8,514	7,385	6,462	5,847

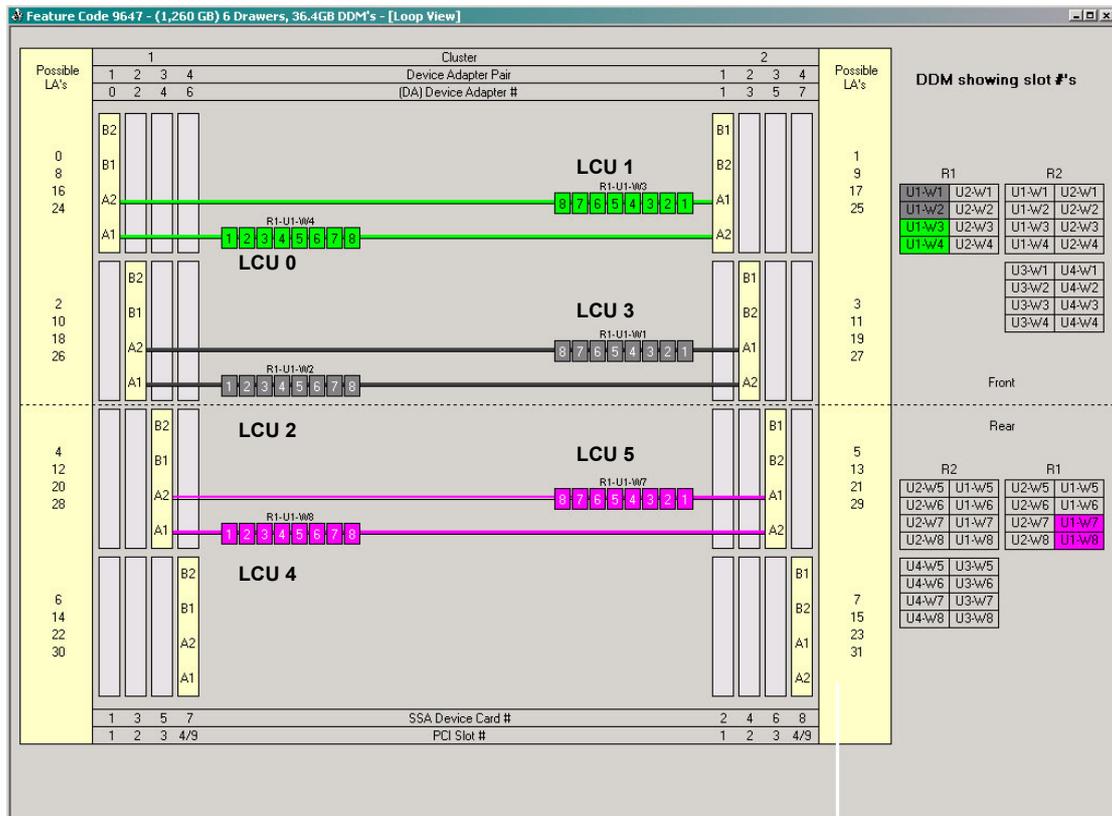

\* 1 D3492 / 3390-3R is not supported by ESS

## CV volumes

Supported:

- 1 – 3339 cyl. reported to BS2000 as 3390-3 (D3490-30)
- 3340 – 10017 cyl. reported to BS2000 as 3390-9 (D3490-40)

## Configuration example: 2105-F20 with 6 LSS

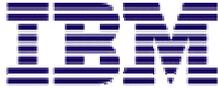

## Configuration example: IOCP (UGEN) 6 LCUs/4 CHPID/256 dev

• DVC C500,AA,D,0E,(C500,I),MULT=128,AT=CTL AA * C500-C5FF LSS5
```

## Recommended disk type definition for UGEN

Define for device (DVC) device type AA.

The system itself will figure out which type of diskdrive is installed/defined in the ESS.  
"AA" is a dynamic disk type.

Example (device definition, UGEN):

```
• DVC C300 ,AA,D,0E,(C300,I),MULT=128 ,AT=CTL AA * C300-C3FF LSS3
```

**AA** = disk type

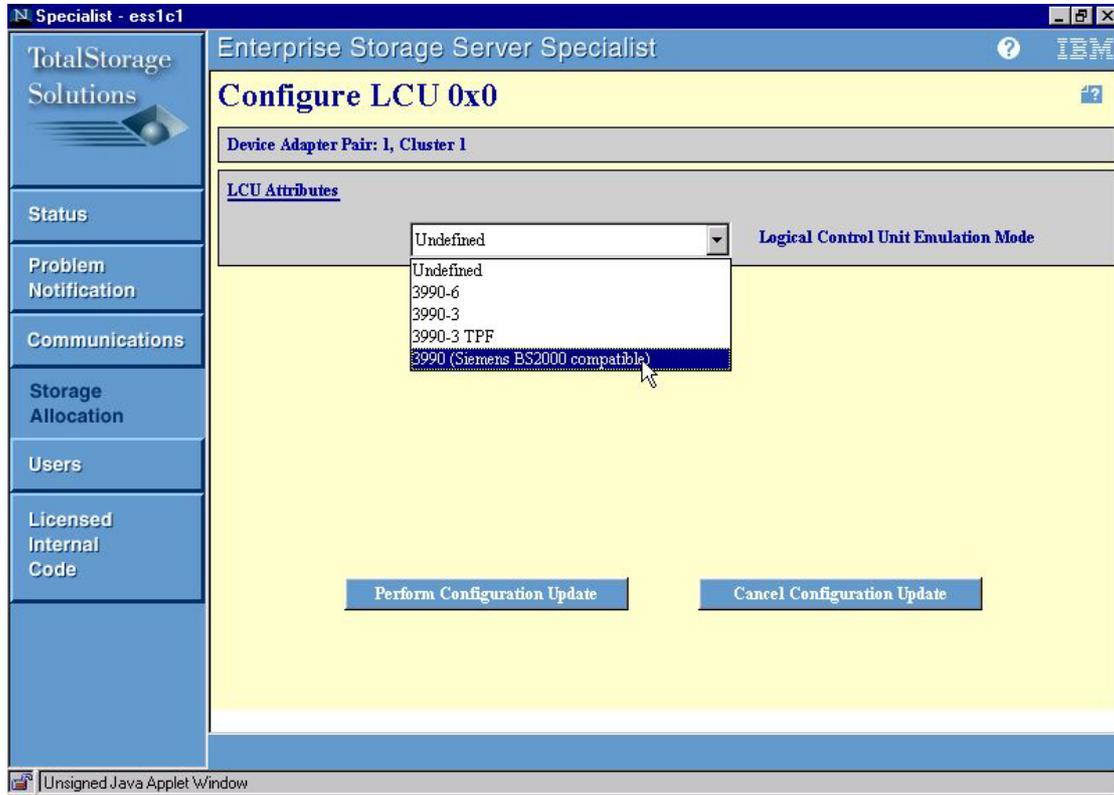

Configure original disk type for 3390-1, -2, -3 and model -9

<u>SIEMENS</u>	<u>IBM-Model</u>	<u>disk type for UGEN (IOCP)</u>
D3490-10	3390-1	-> A7
D3490-20	3390-2	-> 8F
D3490-30	3390-3	-> 89
D3490-40	3390-9	-> 8A

## Supported controller type

LCU attributes: 3990 (Siemens BS2000 compatible)  
Up to 16 LCUs each 256 addresses max.

*Example: definition for LCU 0*

S/390 and BS2000 can coexist on LCU level inside the same ESS.  
Defined volumes in BS2000 can not be accessed from S/390 and vice versa.
