

# Smarter Planet: Dynamic Infrastructure

*Hemant Shah*

*Infrastructure Business, Systems & Technology Group, IBM ASEAN*

Let's build a smarter planet.

Let's build a smarter planet.

### Smarter Energy Use

Your washing machine will bid for electricity. And your neighbor's solar cells might provide it.

### Smarter Energy Generation

Energy saving solar technology will be built into asphalt, paint and windows

### Smarter Supply Chains

Innovative tracking systems help shippers manage supply chains, improve utilisation and security

### Smarter Collaboration

Working together regionally and sharing will be prerequisites for successful government transformation

### Smarter Water

Smarter ways to manage water supplies ... analytics and research on the behavior of watersheds and impact of human activities...

### Smarter Food Tracking

A food tracking solution uses RFID to track and trace meat and poultry from the farm, through the supply chain, to supermarket shelves.

Let's build a smarter planet.

## Something meaningful is happening...

*“Every human being, company, organization, city, nation, natural system and man-made system is becoming interconnected, instrumented and intelligent. This is leading to new savings and efficiency—but perhaps as important, new possibilities for progress.”*

The world is flatter.

The world is smaller.

The world is getting smarter.

Because it can.

Because it must.

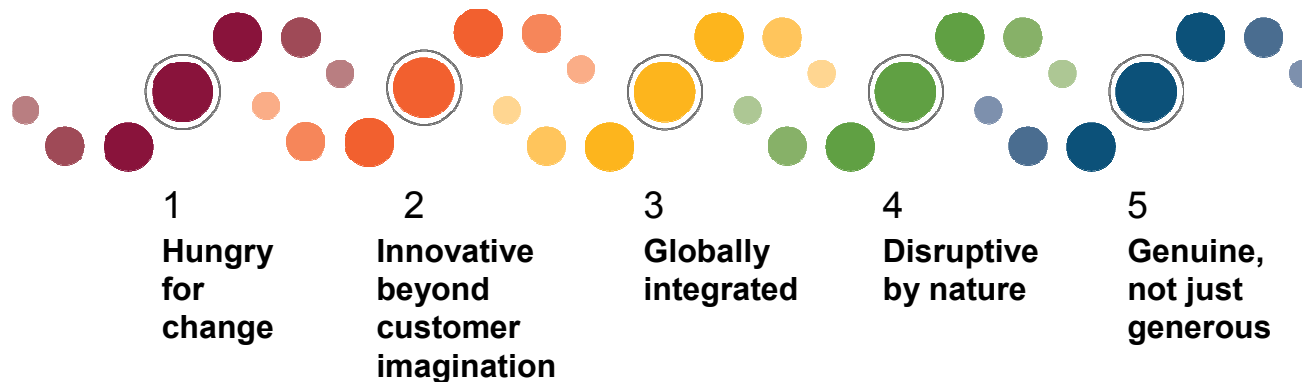

**Because we want it to.**

## The collective wisdom of CEOs: The Enterprise of the Future

- Organizations are bombarded by change, and many are struggling to keep up
- CEOs view increasingly demanding customers not as a threat, but as an opportunity to differentiate
- Nearly all CEOs are adapting their business models—two-thirds are implementing extensive innovations
- CEOs are moving aggressively toward global business designs, deeply changing capabilities and partnering more extensively
- Financial outperformers are making bolder plays

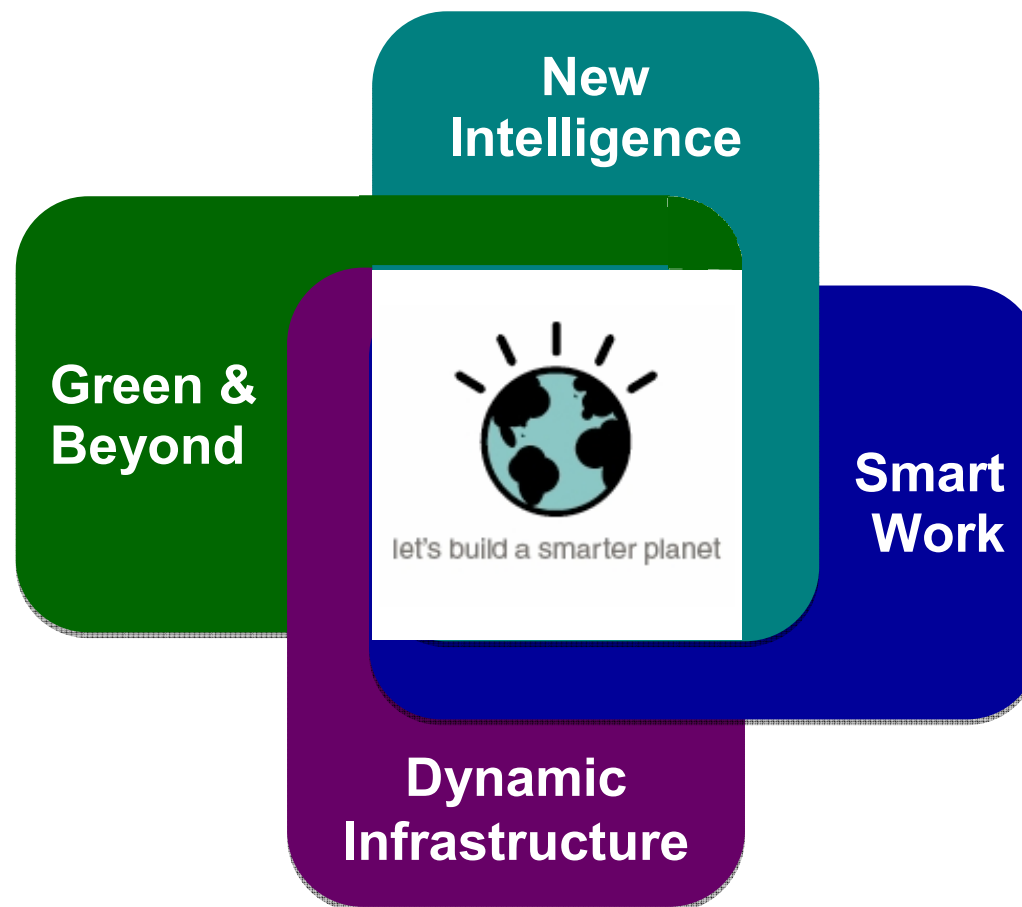

### Core Traits of the Enterprise of the Future

 | *CEOs can now assess how ready they are for becoming the Enterprise of the Future.*

## Unique opportunities and challenges in each theme

## INTERCONNECTED

People, systems and objects can communicate and interact with each other in entirely new ways.

## INSTRUMENTED

We now have the ability to measure, sense and see the exact condition of everything.

## INTELLIGENT

We can respond to changes quickly, accurately and securely, and get better results by predicting and optimizing for future events.

# Infrastructure that brings together business and IT to create new possibilities.

**Mobility  
Infrastructure**

**Facilities  
Infrastructure**

**Production  
Infrastructure**

**Technology  
Infrastructure**

**Communications  
Infrastructure**

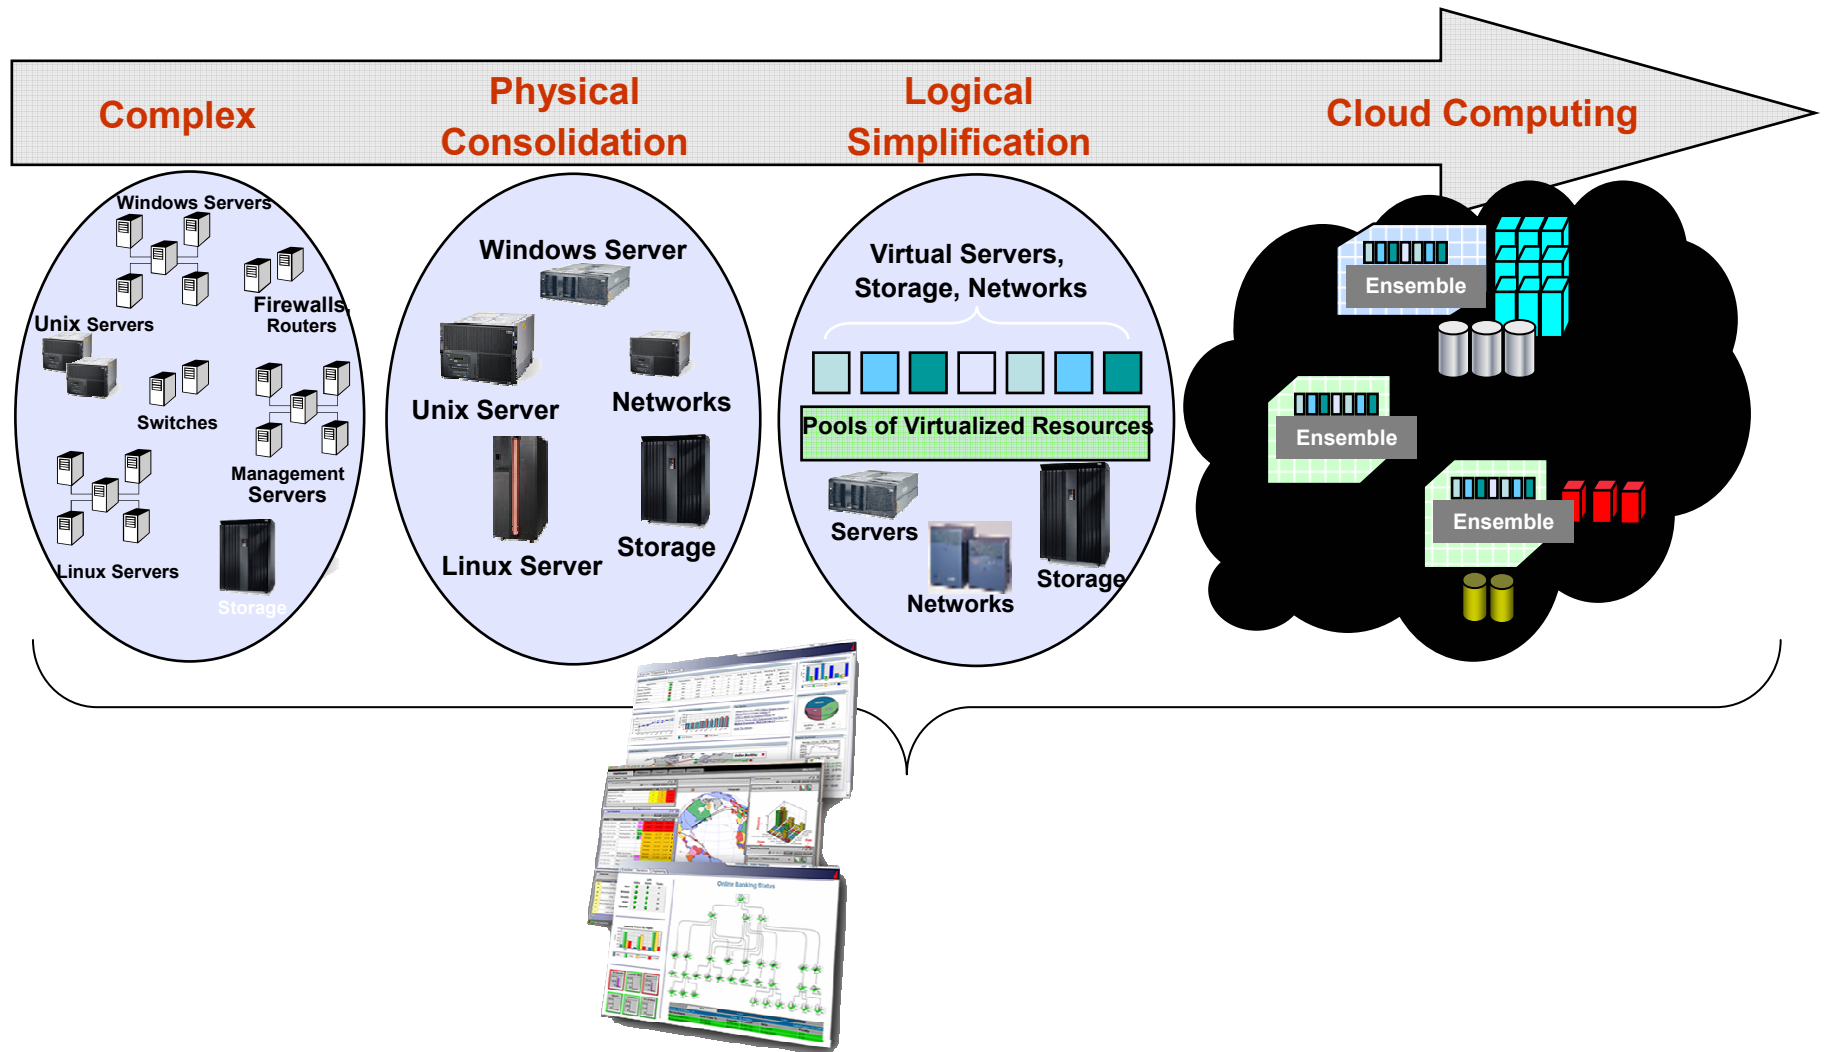

We need a *dynamic* infrastructure.

Let's build a smarter planet.

# Datacenter Evolution

## Reduce cost, improve service, and manage risk

### Rising Cost Pressures

Business and IT assets are underutilized and difficult to manage; operational cost and complexity are reaching unsustainable and uncompetitive levels.

### Higher Service Expectations

Increasingly savvy customers demand continuous service availability and high-quality experience across an expanding range of assets, applications, and services

### New Risks and Threats

Unprecedented security, resiliency, and compliance challenges are created by the accelerating pace of business change and the proliferation of operating, IT, and “smart” assets that comprise the underlying infrastructure.

### Emerging Technologies

Smarter and more adaptive technologies, such as cloud computing, virtualization, and Web 2.0, must be harnessed effectively to drive business innovation, efficiency, and responsiveness.

Let's build a smarter planet.

# Dynamic Infrastructure: Addressing today's challenges *and* tomorrow's opportunities.

## IMPROVE SERVICE

Not only ensuring high availability and quality of existing services, but also meeting customer expectations for real-time, dynamic access to innovative *new* services.

## REDUCE COST

Not just containing operational cost and complexity, but achieving *breakthrough* productivity gains through virtualization, optimization, energy stewardship, and flexible sourcing.

## MANAGE RISK

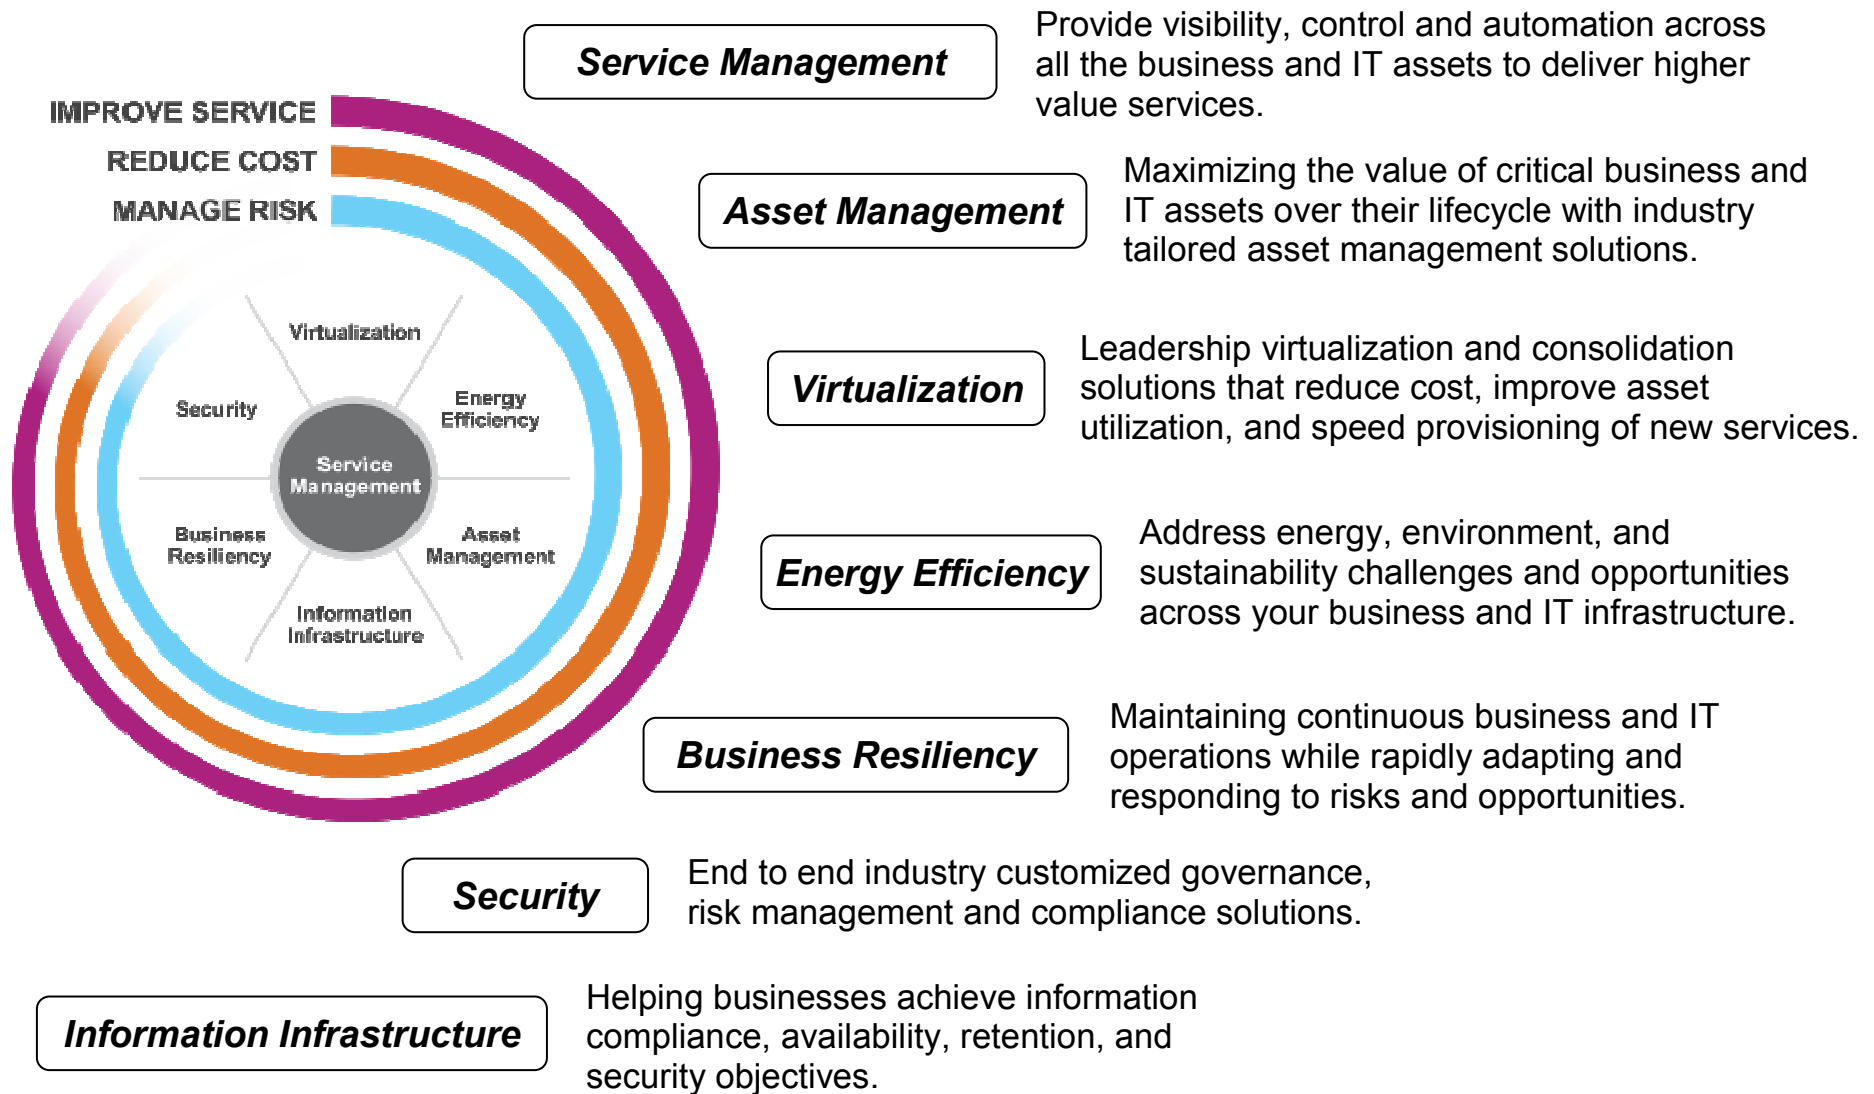

Not only addressing today's security, resiliency, and compliance challenges, but also preparing for the new risks posed by an even more *connected* and *collaborative* world.

Let's build a smarter planet.

# Building a dynamic infrastructure.

# IBM offerings and capabilities.

## IBM SERVICE MANAGEMENT OFFERINGS

- Business service management.
- Event management (systems, network and energy).
- Request-driven provisioning and scheduling.
- Integrated service delivery and process automation.
- Service request management.
- Solutions for cloud computing.
- SOA performance management.
- IT governance.
- Continuous data protection and automated archiving.
- Security of applications, data, and processes.
- End-to-end asset management.
- IT financial management with chargeback and billing.

## IBM ASSET MANAGEMENT OFFERINGS

### Enterprise Asset Management

- Industry Specific Solutions: Nuclear Power, Utilities, Life Sciences, Oil & Gas, & Transportation.

### IT Asset Management

- Service request management.
- License Compliance Manager.

### Functional Extensions:

- Service Providers, Spatial Asset Management, Linear Asset Manager, Mobile Work Manager, Navigator, Calibration.

## IBM VIRTUALIZATION OFFERINGS

- Virtualized Servers and Storage.
- Server Consolidation Efficiency Studies.
- Server and Storage Virtualization solutions.
- Virtualization Management Solutions.
- Virtualization and Consolidation Services.
- Application Infrastructure Virtualization.
- Client Virtualization Solutions.
- Network Optimization Solutions
- Implementation Services.
- Financing and IT asset disposal Services.
- Strategy & Planning Services.

# IBM offerings and capabilities.

## IBM ENERGY EFFICIENCY OFFERINGS

- Energy Efficient Servers and Storage.
- Implementation services.
- Energy management solutions.
- Server and Storage Virtualization solutions.
- Server, storage, network and end-user virtualization and consolidation services.
- Data center strategy services.
- Data center design and build services.
- Energy Efficiency assessments.
- Financing and IT asset disposal services.

## IBM RESILIENCY OFFERINGS

- Resilient hardware – servers and storage.
- Implementation and optimization services.
- Resilience management solutions.
- Disaster recovery and work area recovery solutions.
- Data recovery and information protection services.
- Business Impact Analysis studies.
- Resiliency workshops.
- Availability assessments.
- Proactive managed maintenance services.
- Virtualization solutions for improved resilience.
- Service management solutions for improved resilience.

## IBM SECURITY OFFERINGS

- Identity & access management.
- Trusted identity offerings.
- Data and Information security offerings.
- Application security offerings.
- Policy management/enforcement solutions.
- Network, Server and Endpoint security offerings.
- Security compliance and risk management offerings.
- Self-encrypting storage and key management solutions.
- Security assessment, planning and implementation services.
- Managed security services.
- Education and training offerings.

# IBM offerings & capabilities.

## IBM GLOBAL FINANCING OFFERINGS

### Hardware Financing

- With facilitated mid-lease technology upgrade and end-of lease options.

### Software and Services Financing

- Turning up-front costs into affordable monthly payments, control expenses and match cash flow to business benefits.
- Conserve cash for other strategic initiatives.

### IBM Project Financing

- A customized, all inclusive financial package for services, infrastructure solutions and business transformation projects.

### Asset Recovery Solutions

- For asset disposal (recycling) and disk data overwrite services.

### Customer Center

- An IT asset management tool.

### IBM Certified Used Equipment

## IBM CLOUD COMPUTING OFFERINGS

### Cloud Consulting

- Business Consulting for Cloud Computing
- Infrastructure Consulting Services for Cloud Computing
  - Strategy & Planning
- IT optimization services
- Security and Resiliency Consulting

### Cloud Implementation

- Service Management for Cloud Computing
- IBM design & implementation for test environments
- High Performance On Demand Services (HiPODS)
- Virtual Infrastructure Access
- Self-enablement portal
- Scale out File Services
- IBM security solutions for cloud computing

### Cloud Delivered

- LotusLive
- Lotus Collaboration
- Smart Business Platform (EC2)
- Computing On Demand
- IBM Information Protection Services
  - Remote data protection service
  - Managed data protection for desktops and laptops (Tivoli SaaS)

Let's build a smarter planet.

# Dynamic Infrastructure – Virtualization

Smart is: *Leadership virtualization and consolidation solutions that reduce cost, improve asset utilization, and speed provisioning of new services.*

## Reduce operating costs.

- Consolidate via virtualization to fewer systems.
- Simplify management of the infrastructure.
- Recapture floor space through consolidation.

## Manage availability in a 24/7 world.

- Increase availability and improve resiliency.
- Manage and secure data without affecting its availability.

## Improve service responsiveness.

- Improve system, network and application performance.
- Process more information in real-time to make better business decisions.
- Bring new services online quickly.

## Dynamically adapt to the peaks of the business.

- Dynamically deliver resources where needed most.
- Make data available from anywhere, anytime.

Let's build a smarter planet.

## Dynamic Infrastructure – Information Infrastructure

Smart is: *Deploying a resilient, secure Information Infrastructure to protect, manage and gain insight from information.*

### Consolidated, easy to audit solutions for Information *Compliance*.

- Maintain accurate, reliable, and complete information.
- Manage compliance as an organization-wide process.
- Reduce risk and cost of litigation and audit deficiency.

### Always on Information *Availability*.

- Provide continuous access to information.
- Meet service level commitments by design.
- Reduce disruptions, planned and unplanned.

### Policy-based Information *Retention*.

- Retain and manage business information efficiently.
- Reduce business and legal risk by purging expired data.
- Migrate data non-disruptively during business hours.

### Building Information *Security* into the infrastructure.

- Ensure the security of confidential data.
- Provide secure, policy-based access to information.
- Audit and report security breaches as required.

Let's build a smarter planet.

# Dynamic Infrastructure – Asset Management

Smart is: *Maximizing the value of critical business and IT assets over their lifecycle with industry tailored asset management solutions.*

## IT Asset Management

Track and manage the lifecycle of IT assets.

- Manage security policy compliance.
- Track hardware and software deployment.
- Manage audit, lease and software compliance exposures.
- Combine inventory, maintenance, contacting processes.

## Converged Assets

Leverage operational assets with embedded IT.

- Physical devices are becoming IP enabled - smart meter.
- Embedded IT improves asset performance.
- Enable remote monitoring and automation.

## Consolidated Asset Management

Manage the lifecycle of all critical assets.

- Address all types of assets: Production, Delivery, Transportation, Facilities, Infrastructure and IT.
- Enforce best practices across the enterprise.
- Ensure safe and reliable operations.

## Deep Industry Functionality

Meeting the needs of asset intensive industries.

- Industry specific solutions for Nuclear Power, Utilities, Transportation, Life Sciences, and Oil & Gas.
- Supporting infrastructure with Spatial and Linear Asset Management.

## Dynamic Infrastructure – Energy Efficiency

Smart is: *Addressing energy, environment, and sustainability challenges and opportunities across your business and IT infrastructure.*

### IT Efficiency

Reduce energy costs.

- Implement more energy efficient servers and storage.
- Increase IT utilization and efficiency.
- Improve service with increased flexibility and resilience.

### Data Center Facilities

Reduce capital and operational costs.

- Extend the life of existing data centers.
- Rationalize data center infrastructure across the company.
- Design flexibility into my new data center infrastructure.

### Energy Management

Measure and control energy usage.

- Understand energy consumption.
- Produce reports to demonstrate energy savings over time.
- Put policies in place to manage and control energy use.

### Environmental Leadership

Establish green strategy.

- Comply with emerging stricter controls over energy consumption, greenhouse gases, and disposal of hazardous substances.
- Align IT with corporate sustainability initiatives to drive brand value.

# Dynamic Infrastructure – Business Resiliency

Smart is: *Maintaining continuous business and IT operations while rapidly adapting and responding to risks and opportunities.*

## Manage risk with end to end resiliency

Adopt a business-driven strategic approach to business resilience.

- Minimize impact of potentially disruptive events by determining the right resilience strategy - by business process.
- Respond more effectively to unforeseen events.
- Deploy resilience for services, operations and people.
- Assess business uptime needs against resiliency requirements.

## Ensure resilient service delivery

Effectively manage risk for key business services in a 24/7 world.

- Meet operational needs to address resilience requirements.
- Protect business and IT assets to improve availability and recoverability.
- Deploy automation for failovers and incident response.
- Use monitoring to ensure demand is satisfied during demand spikes.

## Reduce cost through proactive incident response

Reduce operational costs associated with outages.

- Maintain business operations and services.
- Implement failover work areas for your most critical asset – your people.
- Avoid fines associated with compliance requirements or service level agreements.

## Respond with speed and agility

Gain real-time control over risk posture and exposures.

- Ensure risk posture meets policies and regulations.
- Derive insight via dashboards, alerts and reporting.
- Utilize mixed sources for resilience; in-house, outtask, outsource, managed services.
- Regularly test recovery plans.

Let's build a smarter planet.

# Dynamic Infrastructure – Security

Smart is: *End to end industry customized governance, risk management and compliance solutions.*

## Provide end-to-end risk management

Adopt a business-driven strategic approach to security.

- Prioritize security risks by criticality to key business processes.
- Enable business change via a foundation of flexible controls.
- Meet operational needs to address compliance requirements.

## Reduce the cost of security

Meet changing business needs.

- Leverage smart security solutions to lower overall cost
- Explore a mix of in-house and managed solutions
- Embed security into projects and infrastructure to enhance effectiveness.

## Ensure secure service delivery

Effectively manage risk for key business services.

- Meet operational needs to address security requirements.
- Protect business and IT assets to improve confidentiality, integrity and availability.
- Build in automation to respond to market needs, reduce cost and compliance fatigue.

## Respond with speed and agility

Gain control over risk posture and incident response.

- Ensure risk posture meets policies and regulations.
- Improve incident response processes.
- Derive insight via dashboards, alerts and reporting.

Let's build a smarter planet.

# Dynamic Infrastructure – Cloud Computing

*Smart is: Access and deliver resources, services, and information quickly and easily, anywhere and anytime.*

## Infrastructure Efficiency

Pay for what you need, only when you need it.

- Access computing resources as they are needed.
- Increase IT availability and improve efficiency.
- Track usage to effectively allocate resource accounting.

## Respond quickly

Deploy services rapidly in response to needs.

- Get resources quickly to optimize the opportunity.
- Access from any device, anywhere, anytime.
- Infrastructure, platform, application, and processes.

## Manage risks effectively

Effectively meet resiliency and security requirements.

- Effective resiliency and security to ensure control.
- Enhance the user experience with integrity.
- Protect business assets while optimizing delivery.

## Cloud Computing Leadership

Establish a flexible sourcing strategy.

- Implement a strategic plan that leverages flexible sourcing to optimize a dynamic infrastructure.
- Ensure that the IT and business infrastructure is ready to enhance strategic initiatives, not inhibit.

Let's build a smarter planet.

# CIO Strategies for Repair & Prepare

## Germany in worst recession in 12 years

Germany's economy plunged last month to its lowest level since the country was unified in 1990. It is the worst recession since the 1990s, when it fell to 4 per cent. Economists expected a 2 per cent decline, but the country's economy fell 2.4 per cent in the second quarter. In 2009, it was the world's largest drop since 2009. It is the first time in 12 years that Germany's economy has contracted. The country's largest engineering firm, Siemens, reported a 10 per cent drop in revenue last month.

## GM shares may soon be worthless: Analyst

US car industry faces collapse unless govt injects emergency aid

ARSENAL: Once again General Motors could face a crisis. Analysts say the company's shares could be worthless by the end of the year. GM's shares fell 10 per cent last week. Analysts say the company's shares could be worthless by the end of the year. GM's shares fell 10 per cent last week. Analysts say the company's shares could be worthless by the end of the year.

## Crisis to last 'till mid-2010'

US home prices must recover first: Currency expert

By Peter Cook

The financial crisis will not blow over until housing prices in the United States recover, and that will not be until mid-2010, predicts a currency market expert. The housing market is the engine of the US economy, and it is the engine of the world economy. The housing market is the engine of the US economy, and it is the engine of the world economy. The housing market is the engine of the US economy, and it is the engine of the world economy.

## Recession worries to linger in Asia

Real economy fears remain, so players set to exploit every bounce to take profit

By Alan Ross

A NEW wave of recession worries is spreading across Asia. Analysts say the region's economy could be in for a long, hard recovery. The region's economy could be in for a long, hard recovery. The region's economy could be in for a long, hard recovery.

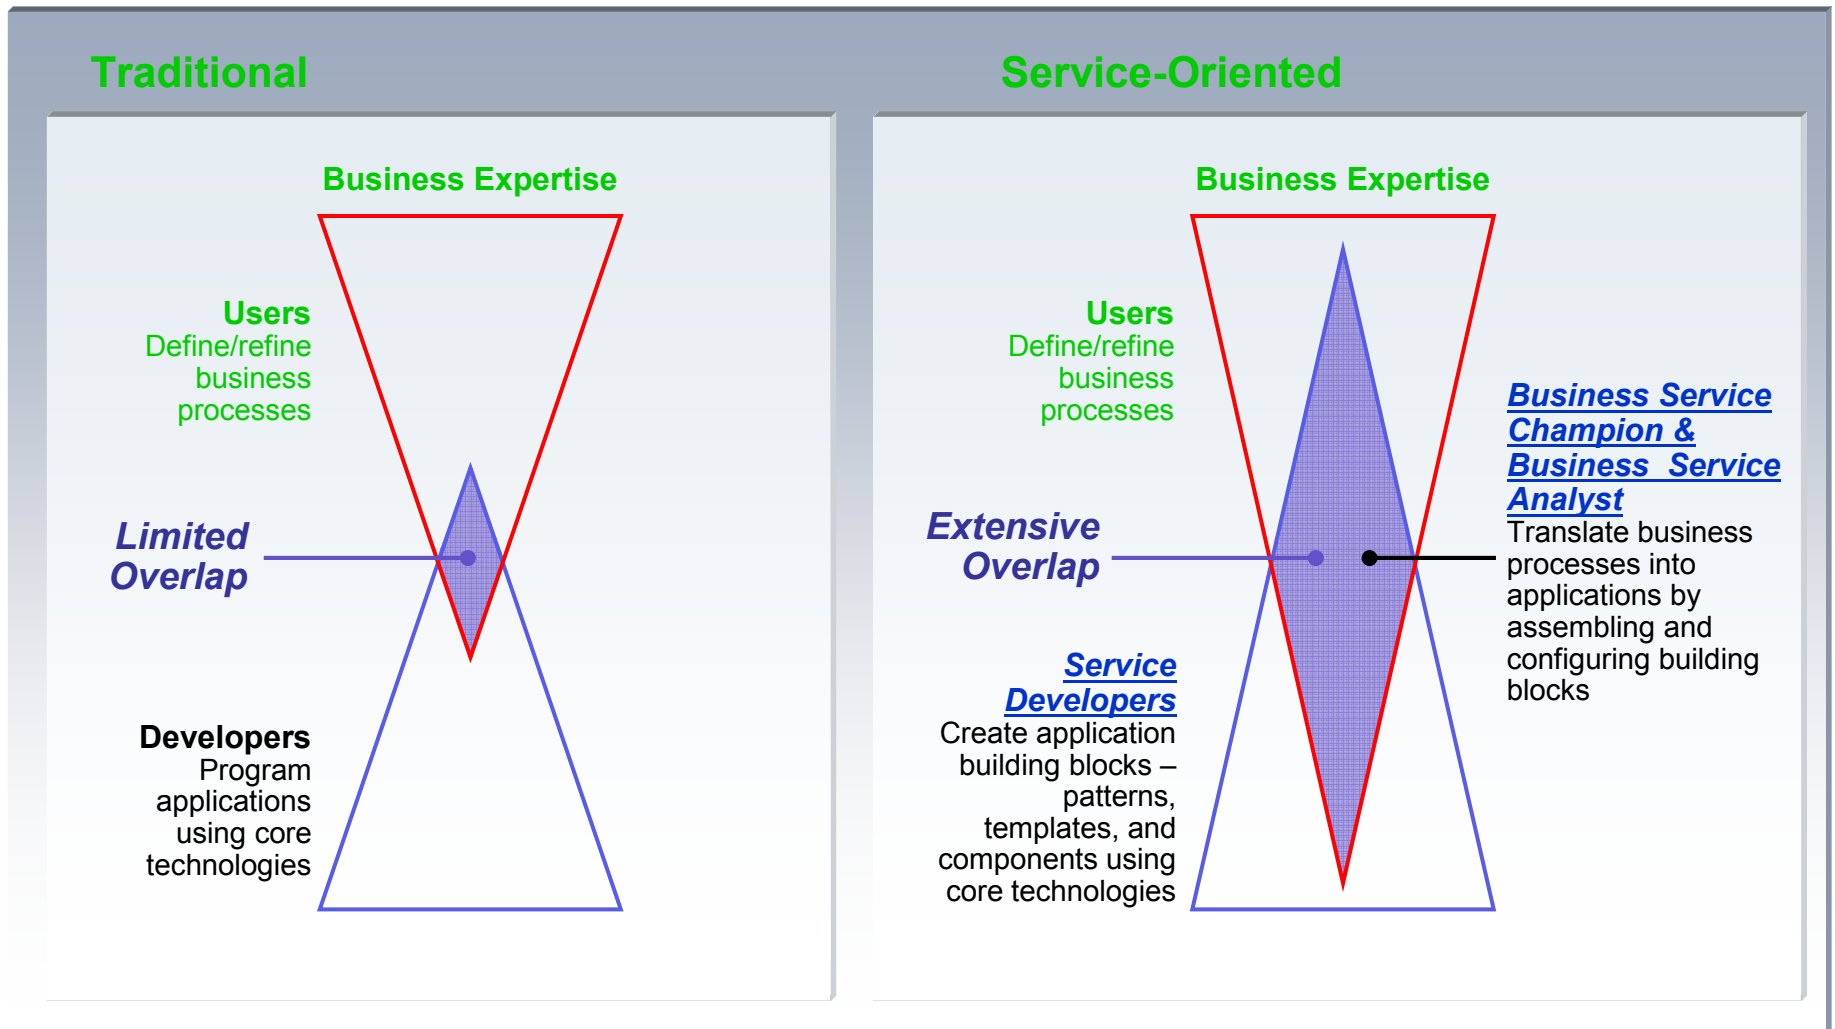

## CIO Strategies for Managing in an Uncertain Environment

- Cutting IT operating expense
- Deferring or reducing capital expenditures
- Seeking productivity increases from their existing infrastructure
- Postponing hiring of additional IT staff
- Revisiting existing service contracts
- Postponing the launch of new initiatives
- Postponing long-term projects in favor of near-term ROI

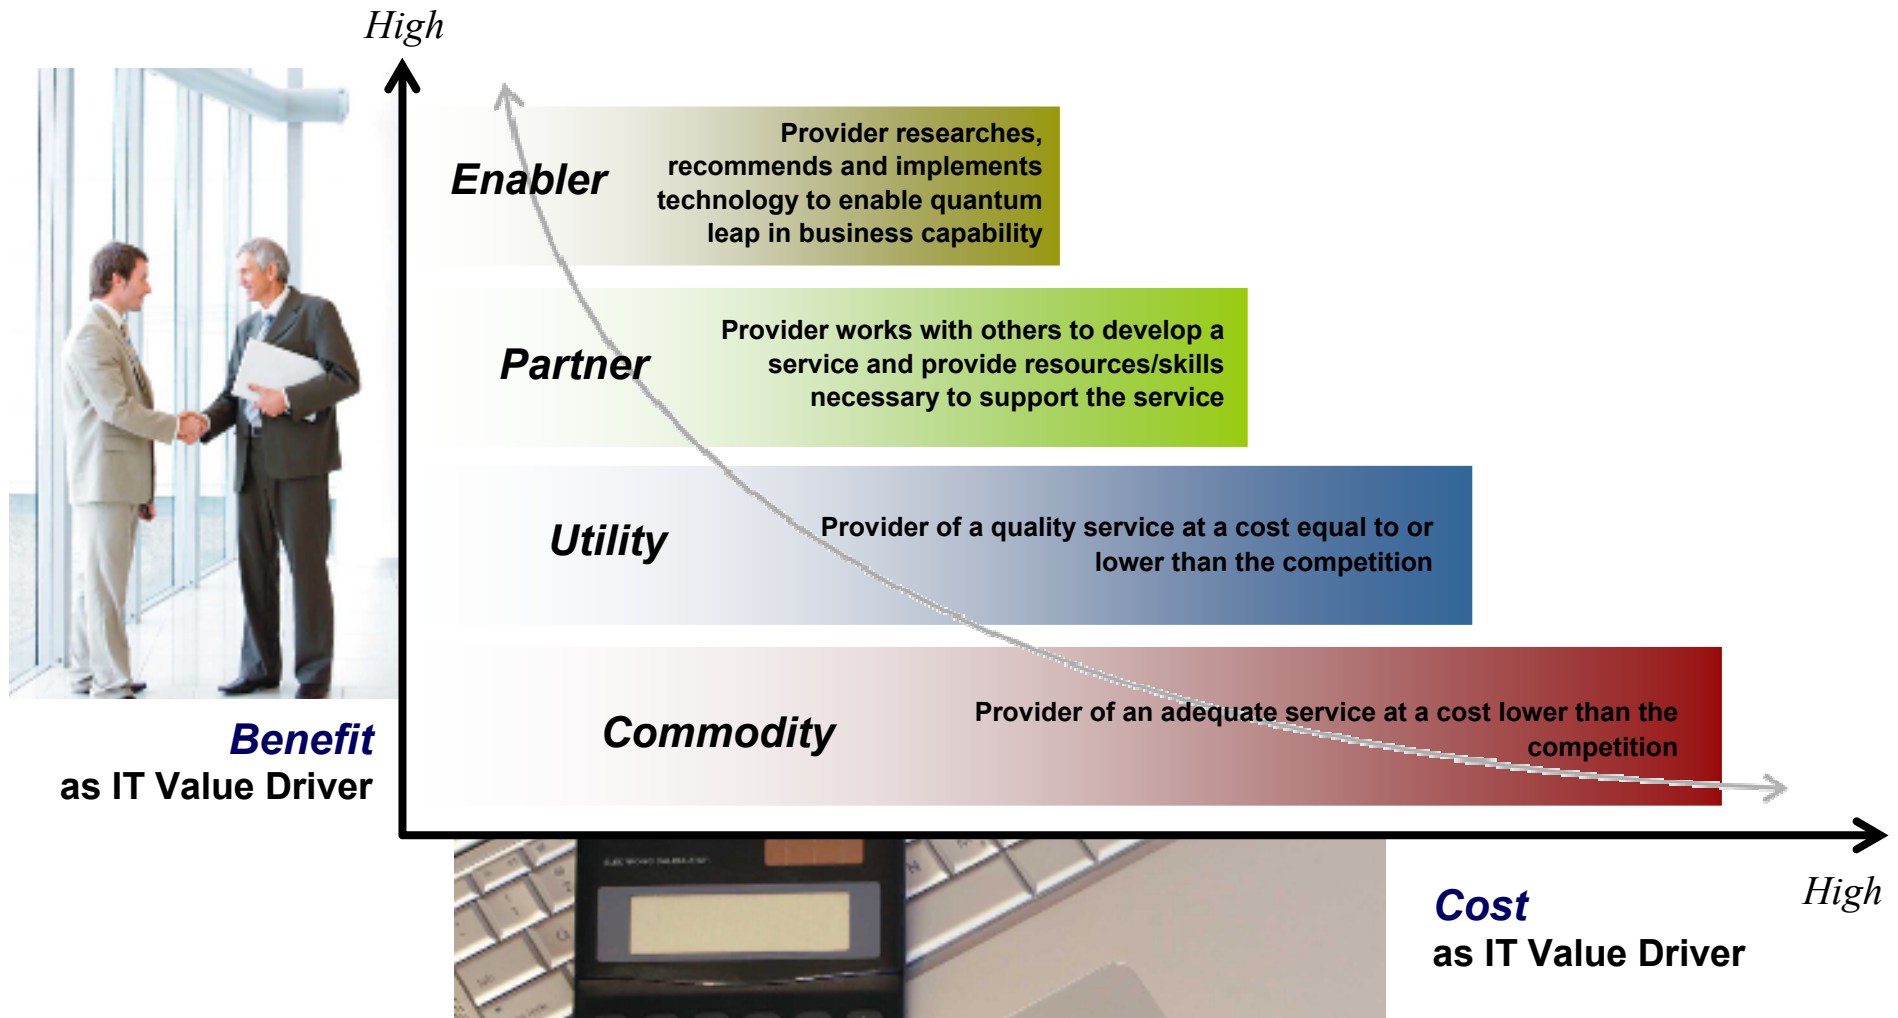

# Enhanced Business/IT Relationships and New Roles

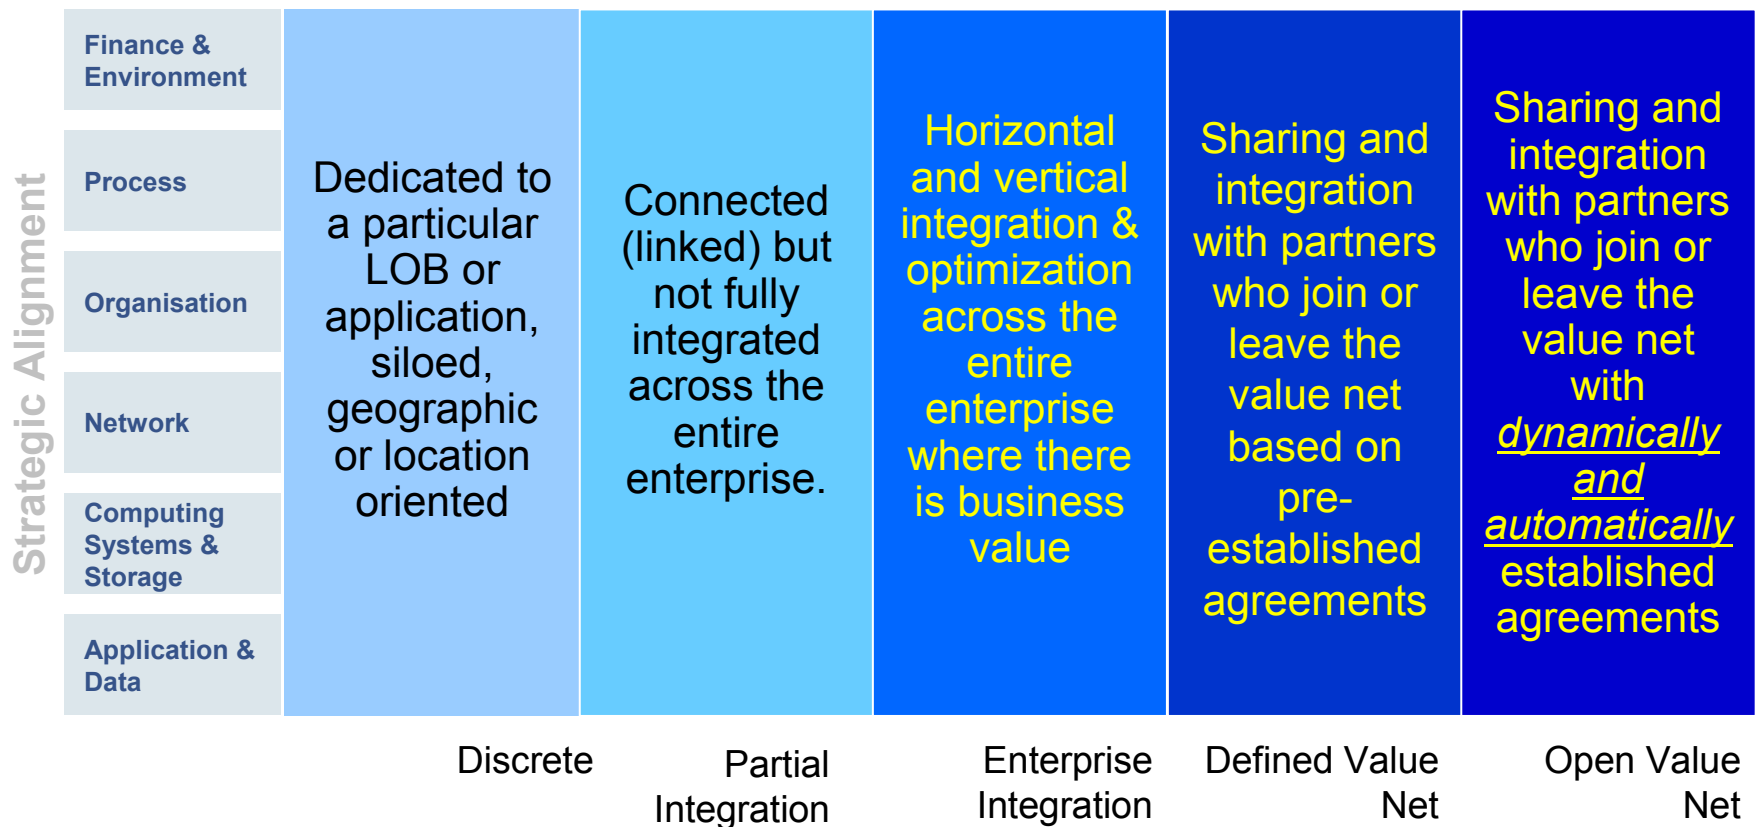

# Provider Relationship Model

# The Dynamic Infrastructure IT Model

Let's build a smarter planet.

## How to get started?

## What does IBM have to offer?

### **Assess potential benefits.**

- Proven tools, assessments and workshops by key initiatives to measure business impact.

### **Collaborate to build the right blueprint for success.**

- Deep business architecture, strategy and change and data center strategy expertise.
- Open standards based approach with a supporting ecosystem of partners.
- Experience from thousands of client engagements.
- Structured architecture approach based on industry best practices.
- Award-winning implementation blueprints and patterns.
- Experiences from our own transformation.
- The broadest systems, storage, software and services portfolio in the industry to find the right fit for your business.
- Access to capital to help create a funding and IT asset disposal strategy.
- Unparalleled research organization and extensive patent leadership.

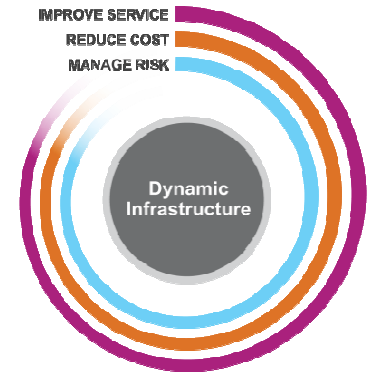

## IBM offers... Entry Assessments & Workshops

Dynamic Infrastructure, Improved Services  
Cost Reduction Risk Management

DI Innovation workshop for IT Strategy Planning.  
(no-charge to customer.. 2 day w/s for qualified Customers)

## Various Solutions Offerings

<b>Understand the dynamic infrastructure vision but need to know its applicability to your business</b>	<b>Need to automate IT processes, manage business services, manage SOA environments or converge business and IT asset management</b>	<b>Need to reduce costs caused by server sprawl, escalating storage costs, inefficient application infrastructure or rising power and cooling expenses</b>	<b>Need to manage risks through a more resilient and secure infrastructure</b>
