

Business Integration Opportunity Assessment & Total Cost of Ownership

Steve Dunnigan,
WebSphere Business Integration Manager
IBM software Group

Agenda

- IBM's business integration opportunity assessment
- Why IBM has the lowest total cost of ownership (TCO)
- Some case studies
- BIOA Methodology

Analyst Quote: Cost Savings in the Real World...

Determining Return on Investment for Integration Brokers:

The results of this study indicate that an Integration Broker **reduces the average number of developer hours** per **simple** interface by **25%**. The average number of hours required to build **moderate** interfaces was reduced by **32%**, and the average number of hours required to build **complex** interfaces was reduced by **43%**.

June 1, 2001

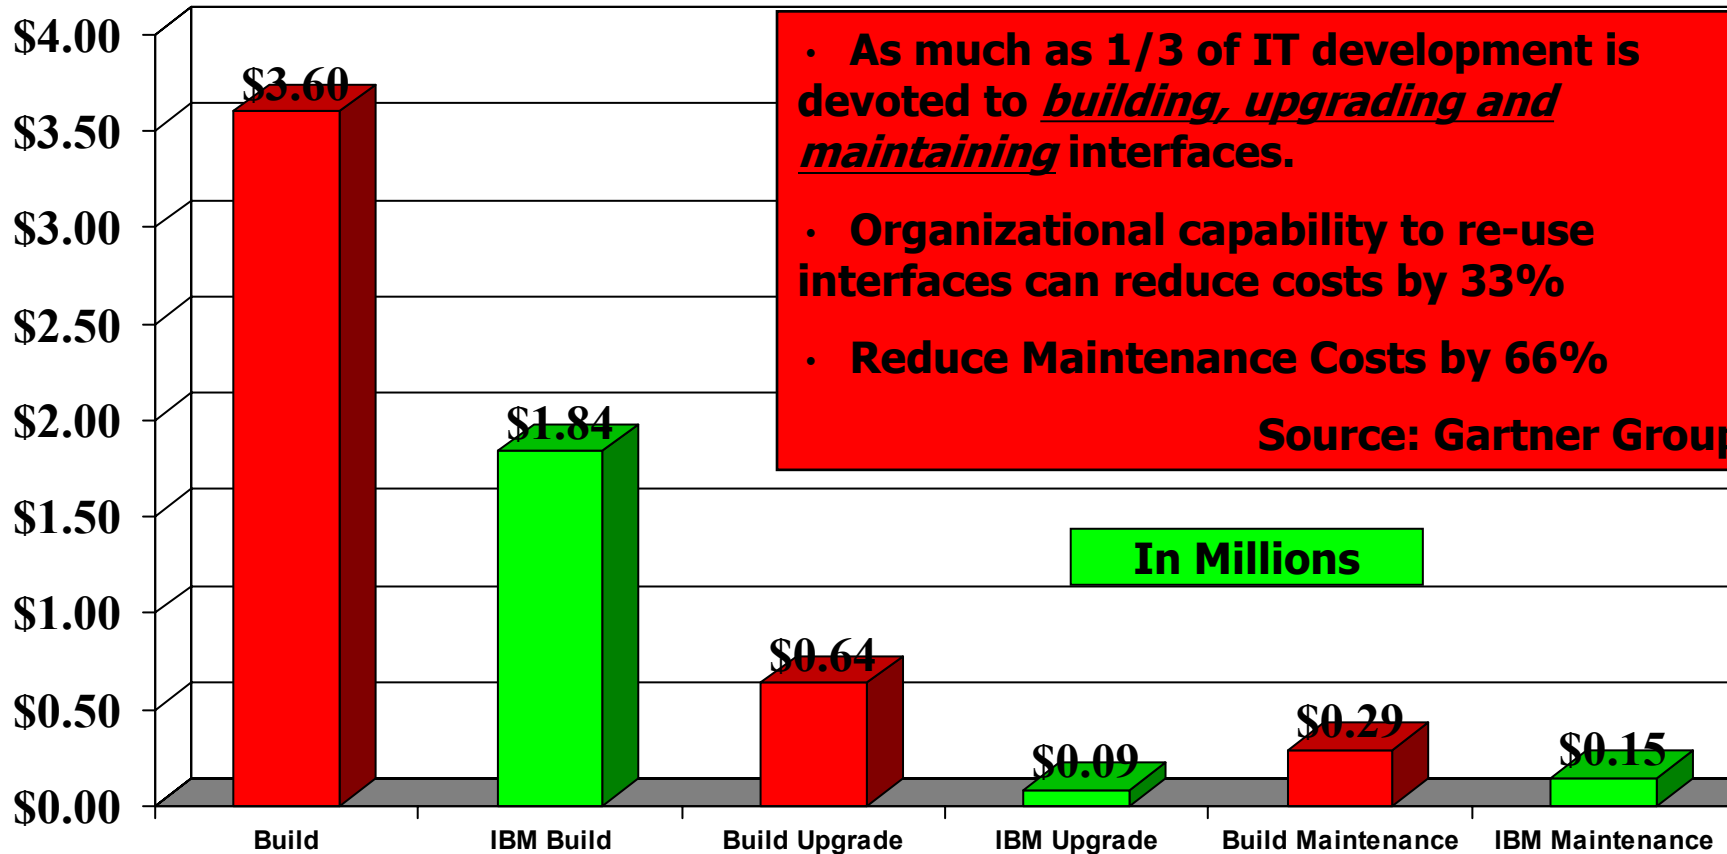

IBM WebSphere Business Integration studies indicate that WebSphere BI reduces the average number of developer hours per **simple** interface by **44%**. The average number of hours required to build **moderate** interfaces was reduced by **47%**, and the average number of hours required to build **complex** interfaces was reduced by **52%**.

IBM's Business Integration Opportunity Assessment

- **Evaluation of the benefits of IBM integration in solving business problems**
 - 3 day to 3 week study
 - Team of business integration experts
 - Working with line of business executives to measure scale of business problems
 - Determine best integration solution from IBM Websphere BI portfolio
 - Message broker, process broker, workflow, process modelling & optimisation

- **Outcome**
 - Total cost of ownership and ROI evaluation
 - Integration approach and solution scope
 - Integration priority assessment

TCO Savings Comparisons Industry Averages—over Two Years

TCO Model--Sample Industry Average

Why Does IBM Have the Lowest Total Cost of Ownership?

➤ **Pre-Built Content:**

- Business Process Modules
- Connectors
- Common Business Object Model

➤ **True Hub(s)-And-Spoke(s):**

- Reduced number of integration points
- Increased efficiencies to assist in conversion and migration

➤ **Integrated Development Environment(IDE)/Rapid Application Development (RAD):**

- Faster time to benefit
- Reduced development cost

➤ **Efficient Maintenance:**

- Reduced FTE's to manage
- Reduced time and cost to upgrade
- Reduced backup/failover systems cost

Example: Dow Chemical

Key business drivers

- Flexibility to adopt new business processes with improved time to market
- Interfaces to strategic and legacy systems to enable e-commerce
- Support corporate growth by providing quick integration capabilities to acquisitions, JVs, alliances
- Improving internal I/S productivity
- Extending existing applications' life cycle

Example: Dow Chemical

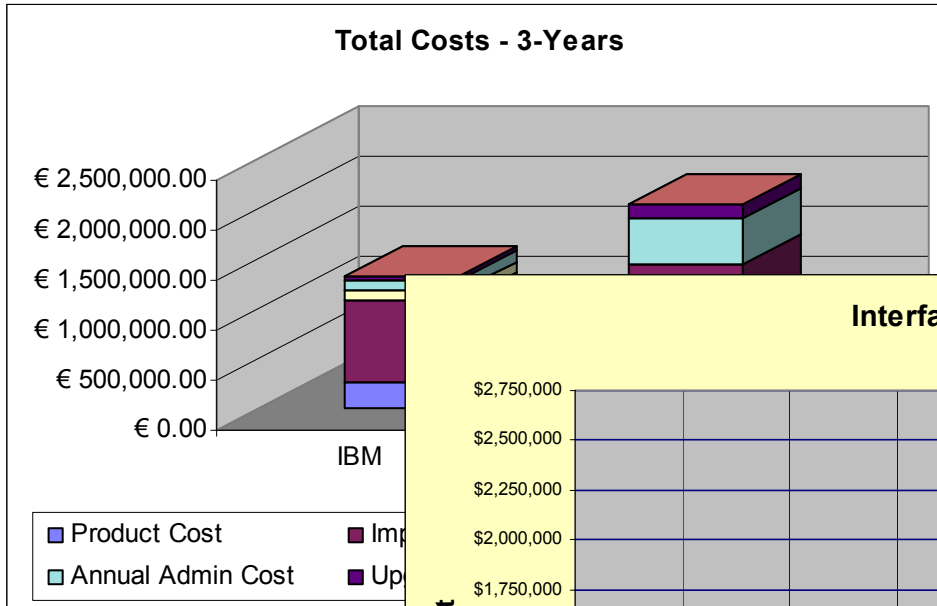

“Our development cost data proves that on each successive project, the cost per interface dropped. It was because of the reuse -- not just the code, but also documentation, infrastructure deployment guideline and training reuse”

Brian bell, lead architecture specialist, Dow chemical

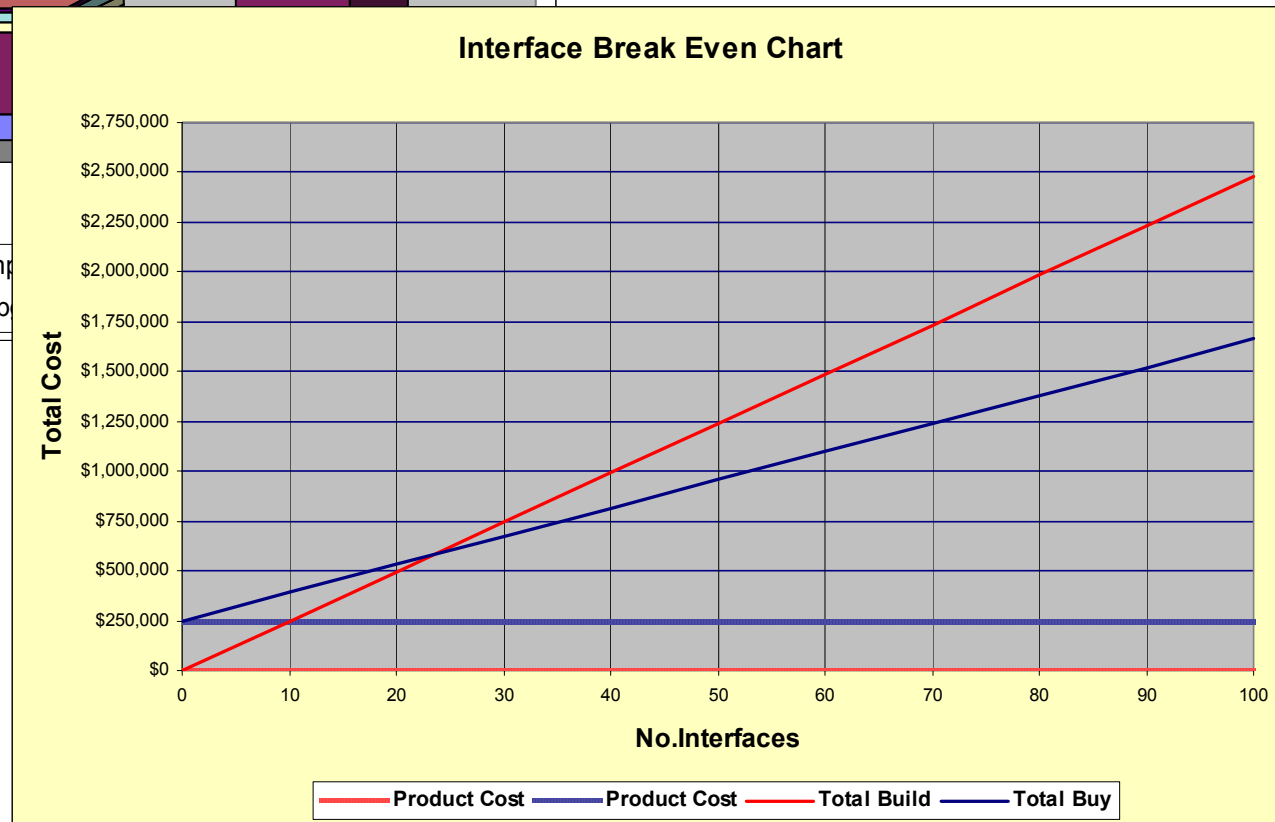

“For example, for business-to-business eCommerce the development hours per interface has decreased from 360 hours for the first marketplace to 36 hours for the most recent. This order of magnitude savings was largely achieved through reuse of interfaces into Dow’s ERP systems and reuse of the external communication infrastructure”

SI Analysis

European Aerospace Customer

- Product Cost
- Annual Admin Cost
- Import
- Upgrade

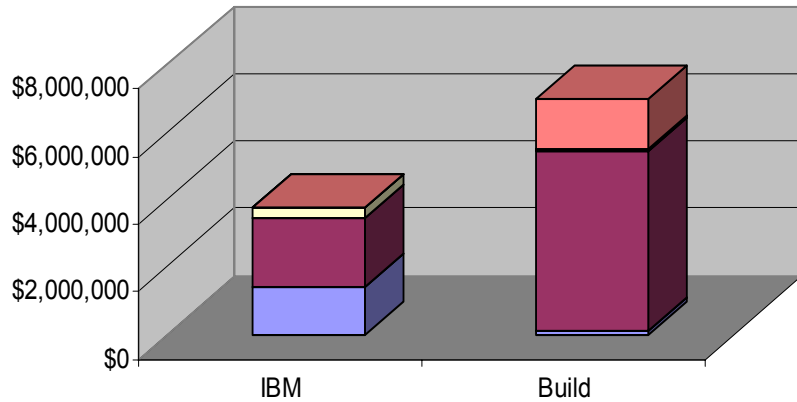

**Break-even at
 22 I/f
 -> falls to just
 15
 after upgrade**

WebSphere software

UK Oil & Petrochemicals Customer

Total Costs - Year 1

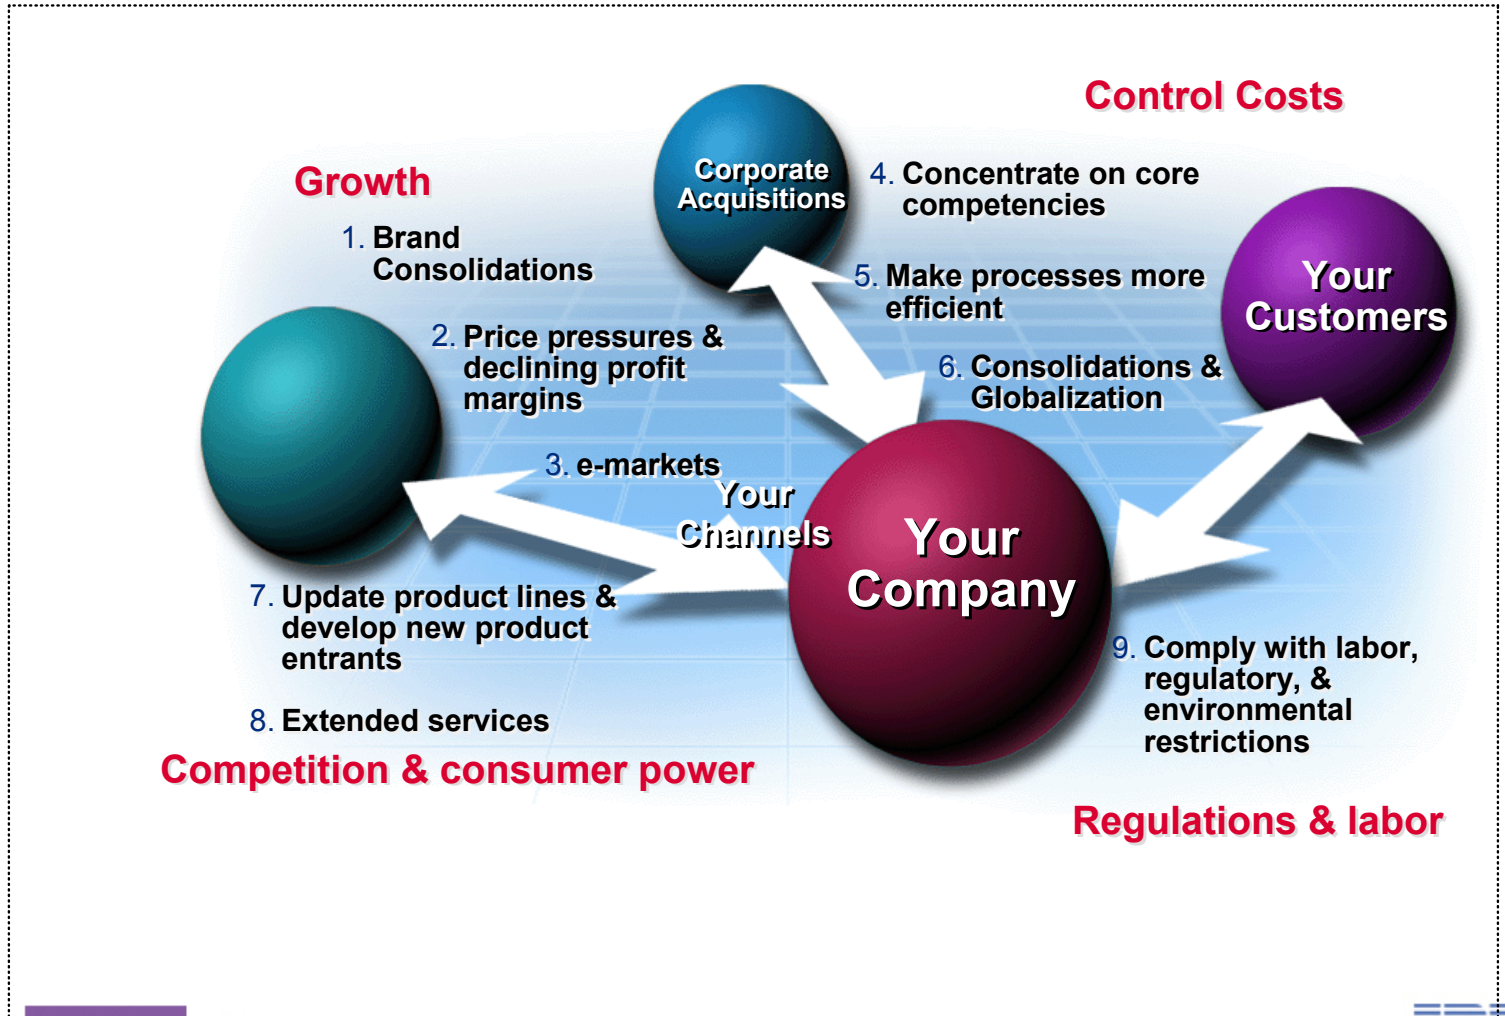

Total Costs - 3-Years

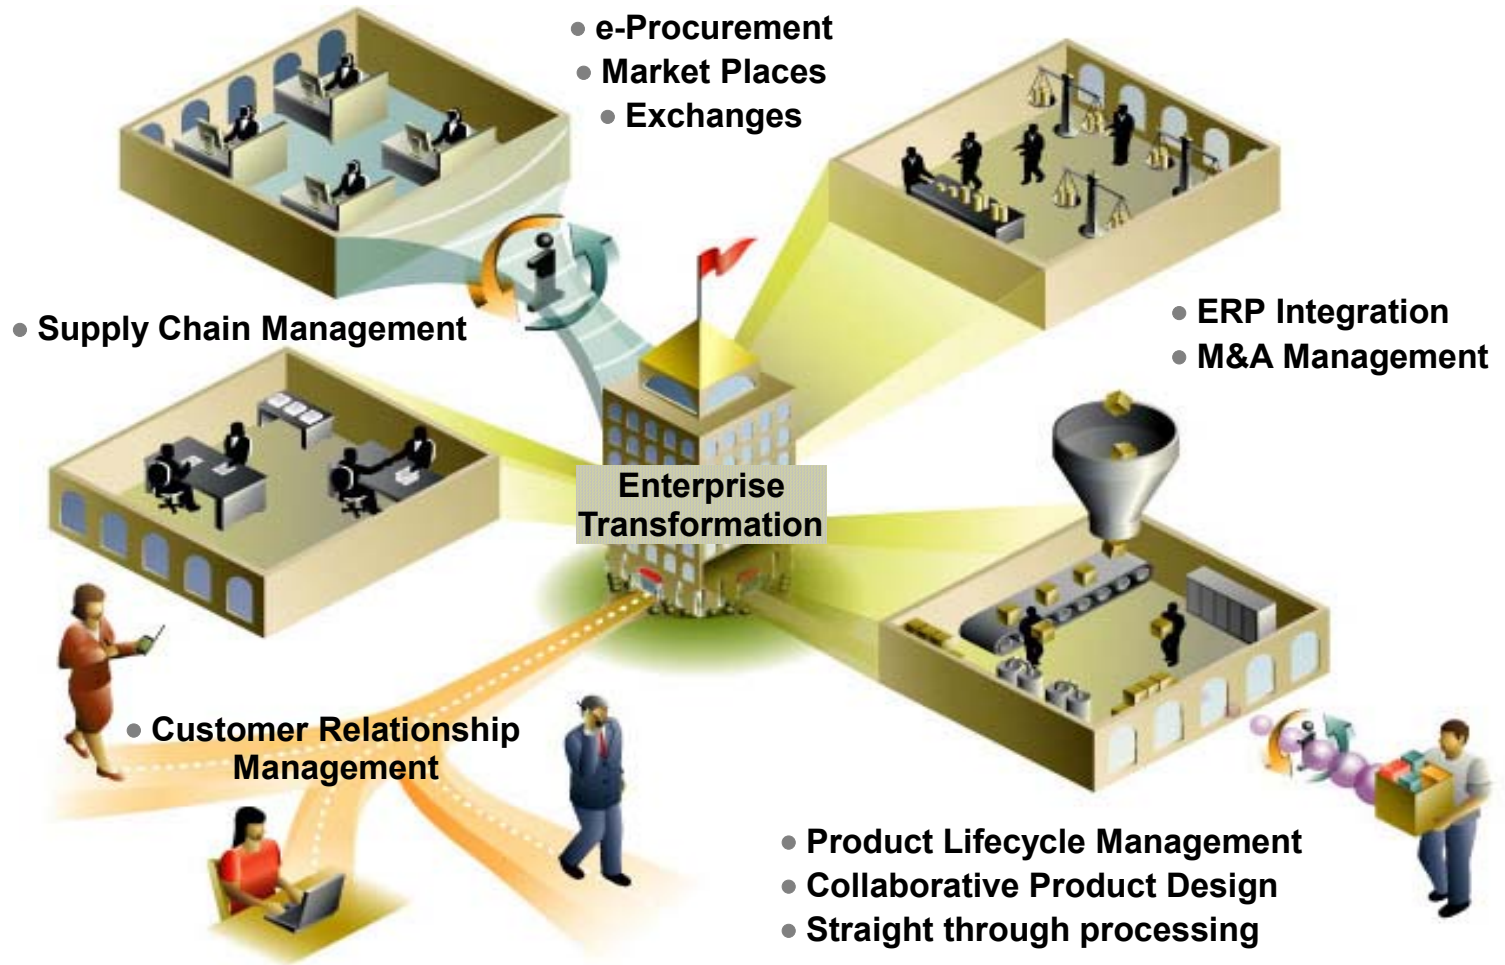

- **Build vs Buy in complex SAP-JDE-CRM environment**
 - **>150 instances of SAP & >70 of JDE**
- **Costs translates to time and speed of implementation**
 - **ICS uses 2/3 less resources**

BIOA Methodology

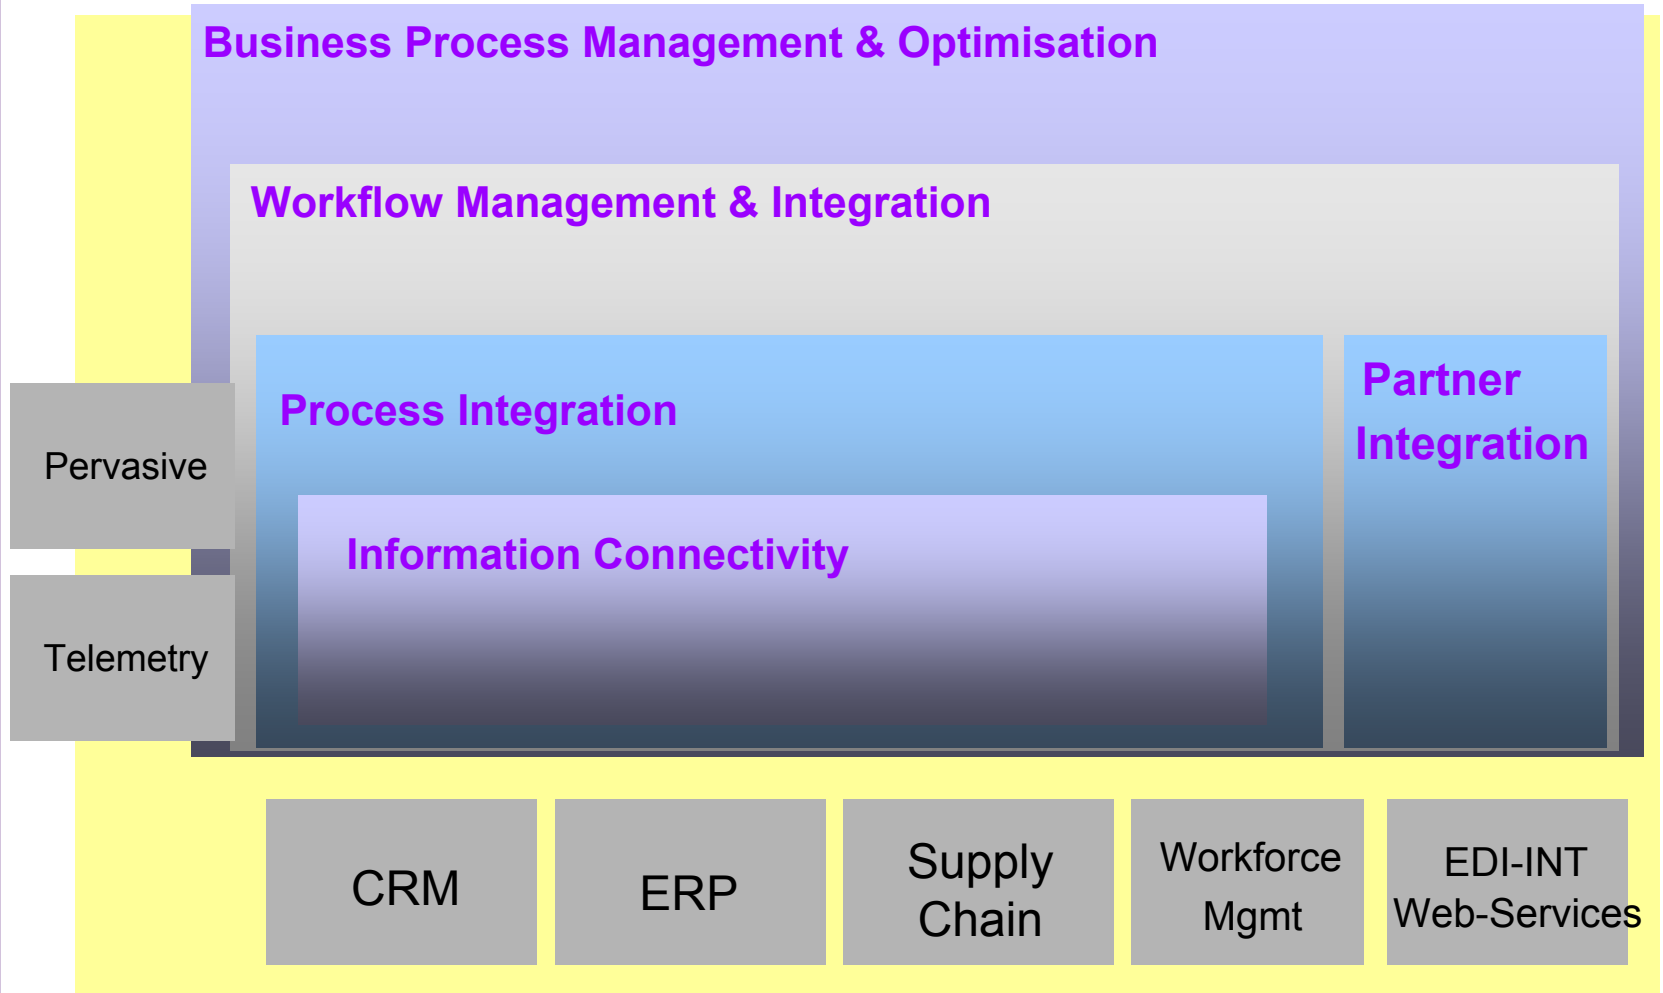

First Step ... Integration Business Drivers

Second Step ... Identify a Specific Project Initiative

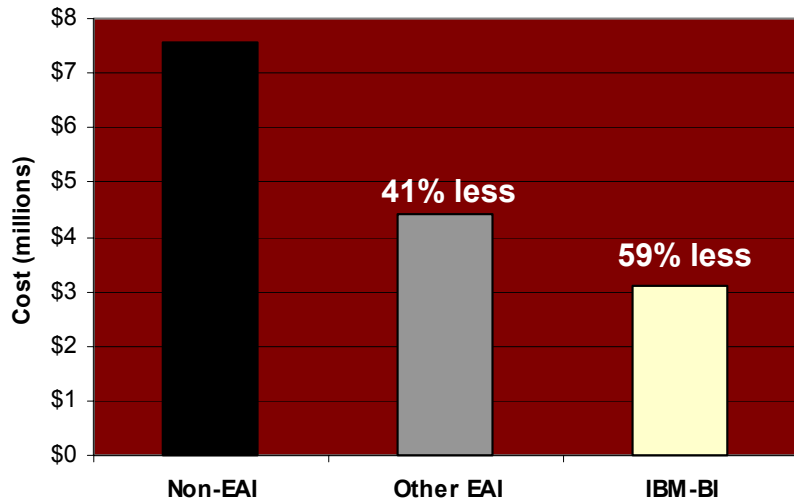

Third Step ... Identify the WebSphere BI Components

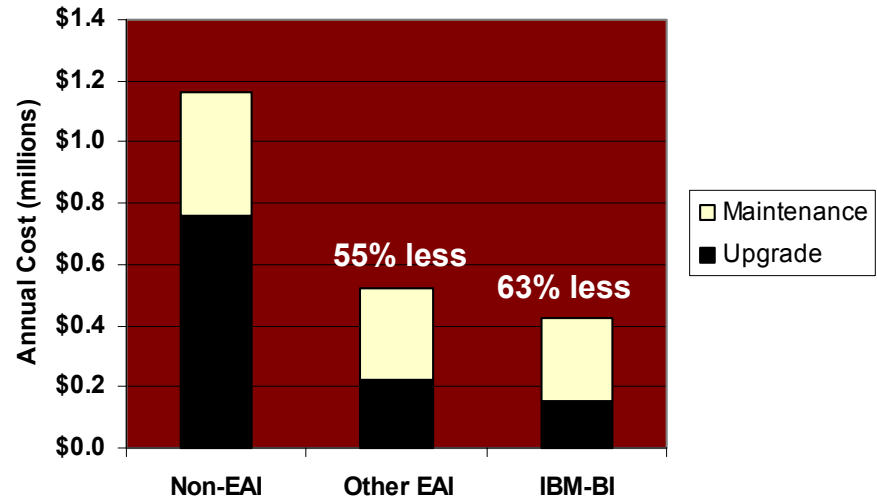

Fourth Step ... Build the TCO Model

Cost to Build

Ongoing Costs

Key Assumptions:

- 75 interface points @ 30% reuse
- Simple/moderate/complex interface ratio = 20/50/30
- Simple/moderate/complex interface developer hrs required using IBM-BI = 100/225/350
- Analysis based on 6 packaged applications and 2 legacy systems
- 2 package upgrades per year

Fifth Step Contribution to ROI

- TCO increases ROI by reducing costs
- Other factors
 - Reducing Inventory in Supply Chain
 - Faster Throughput
 - New services
 - Wealth Management
 - STP
 - Improved global procurement
- Note: ROI calculations are most difficult to prove and to gain credibility.
 - Also, our integration competitors could argue the same benefits (other than TCO gains)

Summary

- BIOA is a solution based approach to solving real business problems
- IBM Websphere's extensive portfolio of integration solutions used to solve business problems
- IBM Websphere BI aims to halve the cost of integration over time
- BIOA can be supported by SI's
- Success rate is HIGH!
