Parker v. Boswell,
Ohio State
Supreme Court,
1986.”

INTRODUCING DESKTOP COMPUTING WITHOUT THE DESKTOP

When you're in the courtroom you use the best means of communication there is. Your voice. But back in the office you're chained to a keyboard. Wouldn't it be great if you could talk to your computer while you got on with the things you need to do to build your case? Does that sound impossible? Well not anymore, because we've incorporated IBM VoiceType speech recognition technology into the best desktop operating system solution money can buy: OS/2® Warp 4. So you can have hands-free e-mail, voice Internet navigation, even dictation into most all your applications. All at the sound of your voice. Which means you can get on with your work while you get out from behind your desk.

With its new graphic interface, OS/2 Warp 4 is the ultimate network computing solution for connecting almost anything, from just about anywhere. A couple of mouse clicks and you're into drives, printers, networks, servers and Web pages. It even comes with Java™ runtime so you can run Java applets from your desktop without a browser. And now you can download a native OS/2 Warp 4 version of Netscape Navigator™ from our website at no charge.* So, either in the office or on the road, there's no better universal client. And what could be better than a perfect client?

Solutions for a small planet™
