

# IBM Program usage and installation report instructions

## WebSphere Application Server Help Guide

Please see below the additional help in collecting deployment information for your IBM Software. (You may need to zoom in to more easily view the screenshots.)

1. Text file containing output of the versionInfo.sh (UNIX) or versionInfo.bat (Windows) located in the install-root\bin directory:  
UNIX: versionInfo.sh -file servername.versioninfo.txt -componentDetail  
Windows: versionInfo.bat -file servername.versioninfo.txt -componentDetail

### Sample Output:

```
IBM WebSphere Application Server Product Installation Status Report
-----
Report at date and time 24 April 2012 09:53:43 BST

Installation
-----
Product Directory    /opt/WebSphere/ukqa4esbshe/EsbServer70
Version Directory   /opt/WebSphere/ukqa4esbshe/EsbServer70/properties/version
DTD Directory       /opt/WebSphere/ukqa4esbshe/EsbServer70/properties/version/dtd
Log Directory       /opt/WebSphere/ukqa4esbshe/EsbServer70/logs
Backup Directory    /opt/WebSphere/ukqa4esbshe/EsbServer70/properties/version/nif/backup
TMP Directory       /tmp

Product List
-----
SCA                installed
ND                 installed
WBI                installed
XML                installed

Installed Product
-----
Name               SCA Feature Pack
Version            1.0.1.7
ID                 SCA
Build Level        cf071033.04
Build Date         8/18/10
Architecture       AMD (64 bit)

Installed Product
-----
Name               IBM WebSphere Application Server - ND
Version            7.0.0.13
ID                 ND
Build Level        cf131039.07
Build Date         10/2/10
Architecture       AMD (64 bit)
```
