

IBM Rational Statemate 4.6 Defects Fixed List

Initial Release

- Defect 61326 Global rename does not effect panels
- Defect 74408 Incorrect StateMate handling of string variables
- Defect 80233 Global rename of data element does not update binding field of panel
- Defect 93316 Deletion of Transparen Non-Transparent Mode of Routers
- Defect 94495 Delete Contents of current workarea
- Defect 104706 STM MicroC hangs
- Defect 105458 wrong value of data item in simulation
- Defect 105725 Simulation Log file missing ID for Transition flowing through connector
- Defect 108961 request to Display transition in Wa
- Defect 109039 Dataimport Importing Parameters
- Defect 109319 GBA server bug in animation
- Defect 109328 Problem with panels of executable generated with μ C code generator
- Defect 109481 Open References button necessary for Fields
- Defect 109492 Copy Paste between fields of different records
- Defect 109761 CG crash when using large action
- Defect 109829 StateMate 4.2mr2 optimization options
- Defect 110097 Panel builder generates empty panel when selecting Top Level Input Output
- Defect 110099 code generation for nested generics
- Defect 110109 MicroC code generator bug
- Defect 110136 Panel Bind report column not large enough to read the names
- Defect 110141 Text orientation in charts
- Defect 110144 Different behavior between Simulation and μ C code generation with priority
- Defect 110163 information to No dump file will be created at MicroC-Codegenerator
- Defect 110169 Request for having same behavior in simulation for GBA animation
- Defect 110204 Hang-ups of STM windows upon opening second-level properties
- Defect 110408 nested tasks - no check model warning
- Defect 110423 Cell Data Missing Comments
- Defect 110430 Documentor API to retrieve global parameters MODE of Subroutines
- Defect 110431 Documentor API stm r included gds always return empty list
- Defect 209072 Being able to modify a chart from dataImport for a opened chart
- Defect 209078 display transition in Wa and access to the properties of the transition
- Defect 218967 Option to compress charts data file
- Defect 221130 MicroC - some subroutines generated twice with corrupted expressions
- Defect 221629 constant array definition is created even if external binding exists
- Defect 221713 simulation crash when using context variables
- Defect 221915 Binding Fields of Record does not work for Interactor using Panel
- Defect 222452 Implementing generic charts components with external bindings as functions
- Defect 222453 Incorrect binding to external function
- Defect 222510 Wrong typecast for ABS macro
- Defect 222653 Preserve current version when importing files
- Defect 222897 crash when selecting element of complex datatype
- Defect 222899 crash when generating sequence diagrams
- Defect 223323 not possible to copy an activity with truth table
