

## Lunch with an ISV Sponsor

# Evolution Robotics Retail™

Our vision, your profit™

Evolution Robotics Retail develops intelligent solutions for the retail industry based on its Visual Pattern Recognition technology -- ViPR®. The company's flagship product is LaneHawk™, a visual scanner that turns bottom-of-basket (BOB) losses into profits. LaneHawk detects and recognizes BOB items, sends their respective UPC codes to the POS, and includes those items as part of the transaction. LaneHawk makes sure that stores get paid for their BOB items.
