

Extending Your Mainframe For More Business Value

Extend Access Channels
With SOA

Service Oriented Finance's Business Problem

We want to grow revenue and improve customer satisfaction by extending new access channels to our business

**Service Oriented Finance
CEO**

Mainframe Extension Solution – Extend Access Channels

■ Key Access Channels

- ▶ Web access by customers and business partners
- ▶ Call centers
- ▶ Front offices
- ▶ Enabled by internet technologies

■ Growing pains and requirements

- ▶ How to expose access to back end systems?
- ▶ Significant increase in transactions is typical
- ▶ Constrain I/T costs to grow slower than business revenue

Service Oriented Finance's Technical Challenges

How can we leverage our existing mainframe investments?

Existing CICS Investment: Customer Management System

The screenshot shows a terminal window titled "Session A - [24 x 80]". The window contains the following text:

```
OPERATOR INSTRUCTIONS  
  
OPERATOR INSTR - ENTER AMNU  
FILE INQUIRY   - ENTER AINQ AND NUMBER  
FILE BROWSE    - ENTER ABRW AND NUMBER  
FILE ADD       - ENTER AADD AND NUMBER  
FILE UPDATE    - ENTER AUPD AND NUMBER  
  
PRESS CLEAR TO EXIT  
ENTER TRANSACTION: █ NUMBER █
```

At the bottom of the terminal, there is a status bar with "MA a" on the left, "12/021" in the center, and "Connected to remote server/host:192.168.0.111 using lujpool SCOTCP05 and port 23" on the right.

Existing application consists of CICS programs accessed via “green screen” terminals.

We have invested millions of dollars in this asset

**Service Oriented Finance
CIO**

Use SOA To Extend Your Mainframe Assets

We want to make portions of this CICS application available to our new channels

**Service Oriented Finance
CIO**

CICS TS Version 3 has built-in capabilities to expose programs as web services

IBM

The Basics: What Is SOA?

... a service?

A **repeatable business task** – e.g.,
check customer credit;
open new account

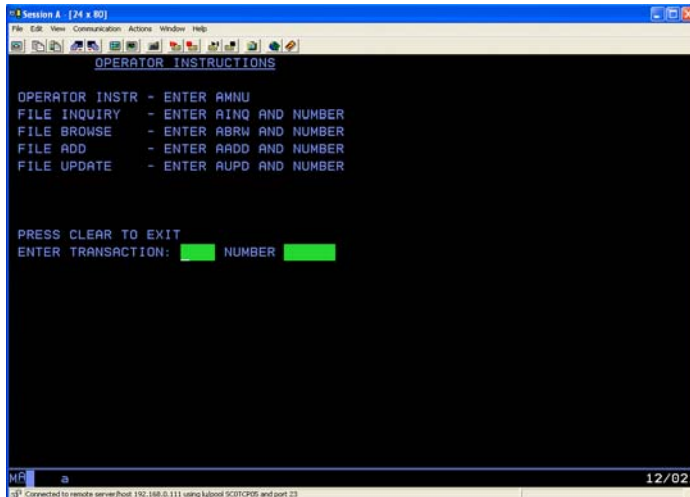

... **service oriented architecture (SOA)**?

An IT **architectural style** that supports
integrating your
business as linked
services

“SOA impacts every aspect of IT and business.”

Gartner

DEMO: Portal Calls CICS Program Using Web Services

- Customers accesses the Portal
- A portlet talks to the CICS Loan application using Web Services

Web Services expose CICS and IMS investments for a new generation of re-use

Customer

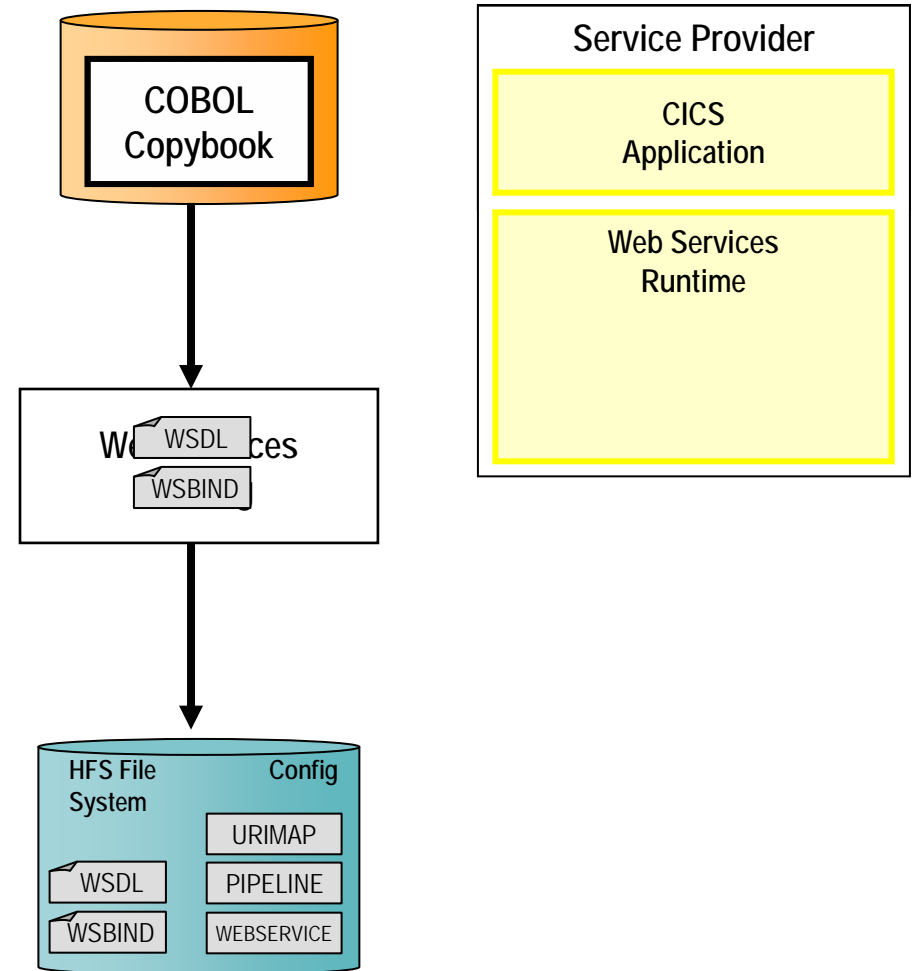

CICS Web Services

- Native Web Services capability offered by CICS
 - ▶ A CICS application can be a web service provider and requester
 - ▶ Fully integrated into CICS
 - Resource definition using CICS admin screen, problem determination, monitoring & statistics
 - New tooling support for easier application development
 - ▶ SOAP requests can flow over HTTP or WebSphere MQ transports

- Rich set of Web services standards supported
 - ▶ SOAP 1.1 and 1.2 to send and receive web service messages
 - ▶ WS-I Basic Profile 1.0 for interoperability with between providers and requesters
 - ▶ WS-Coordination transaction coordination
 - ▶ WS-AtomicTransaction
 - ▶ WS-Security for authentication and encryption of messages

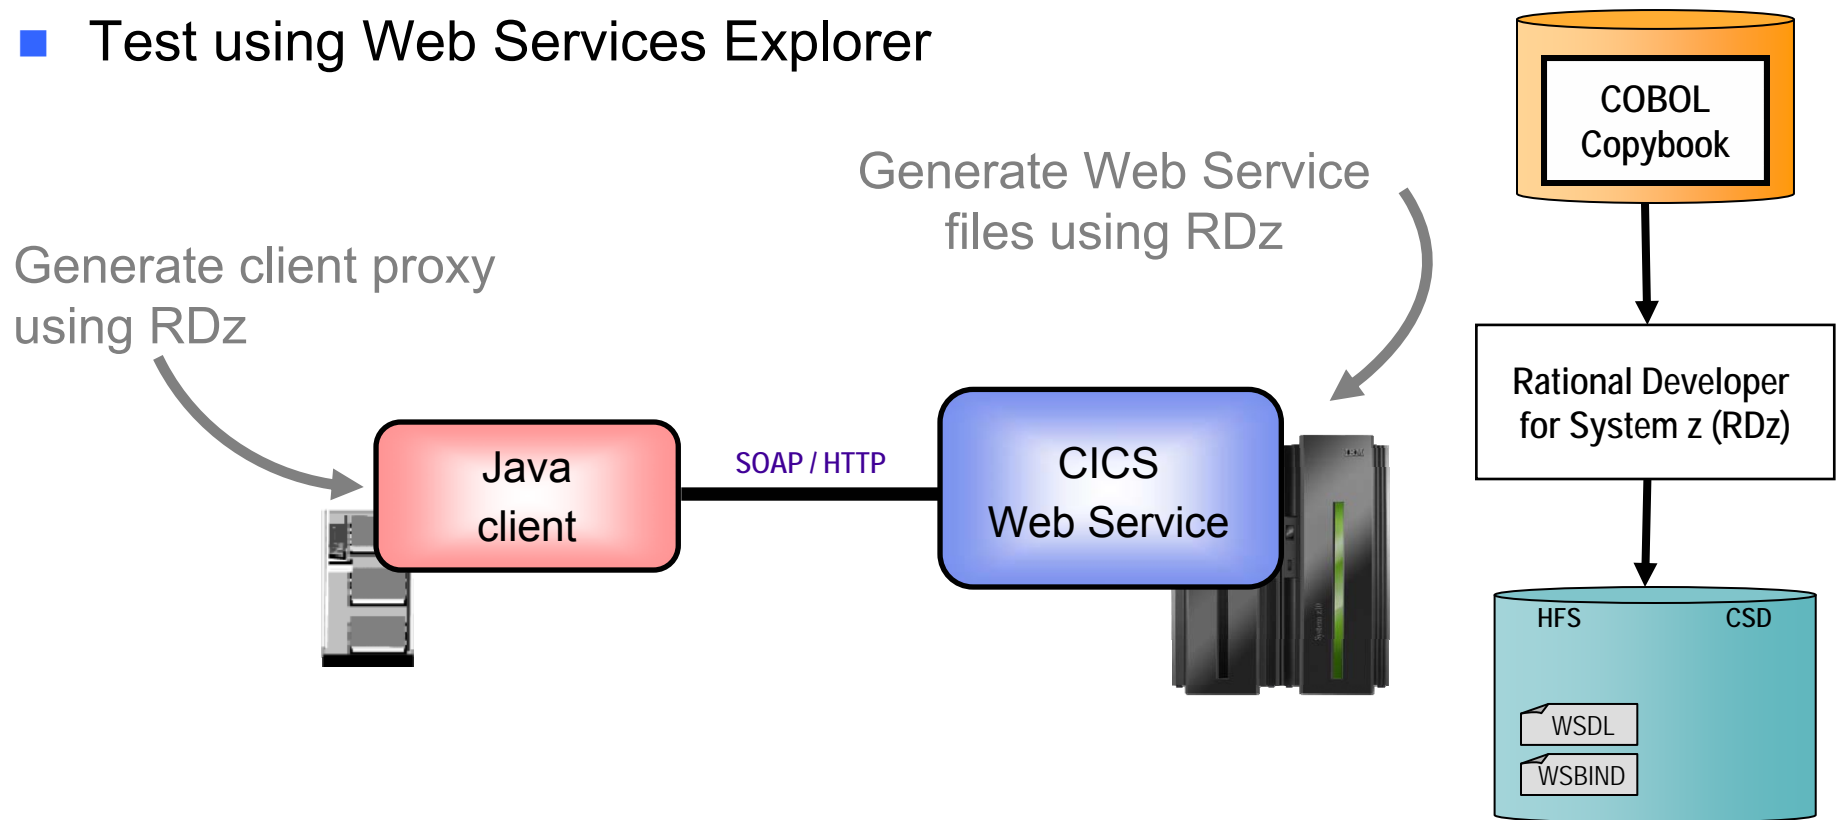

Development Steps To Expose CICS Application As A Web Service Provider

1. Start with COBOL copybook
2. Generate WSDL from copybook
3. Copy files to host file system.
 1. Use standard CICS supplied PIPELINE definition
4. CICS automatically installs other related definitions
5. CICS application is now web service enabled

DEMO: Use Rational Developer For System z To Expose CICS Program As Web Service

- Generate WSDL and WSBIND files
- Deploy files to host file system
- Test using Web Services Explorer

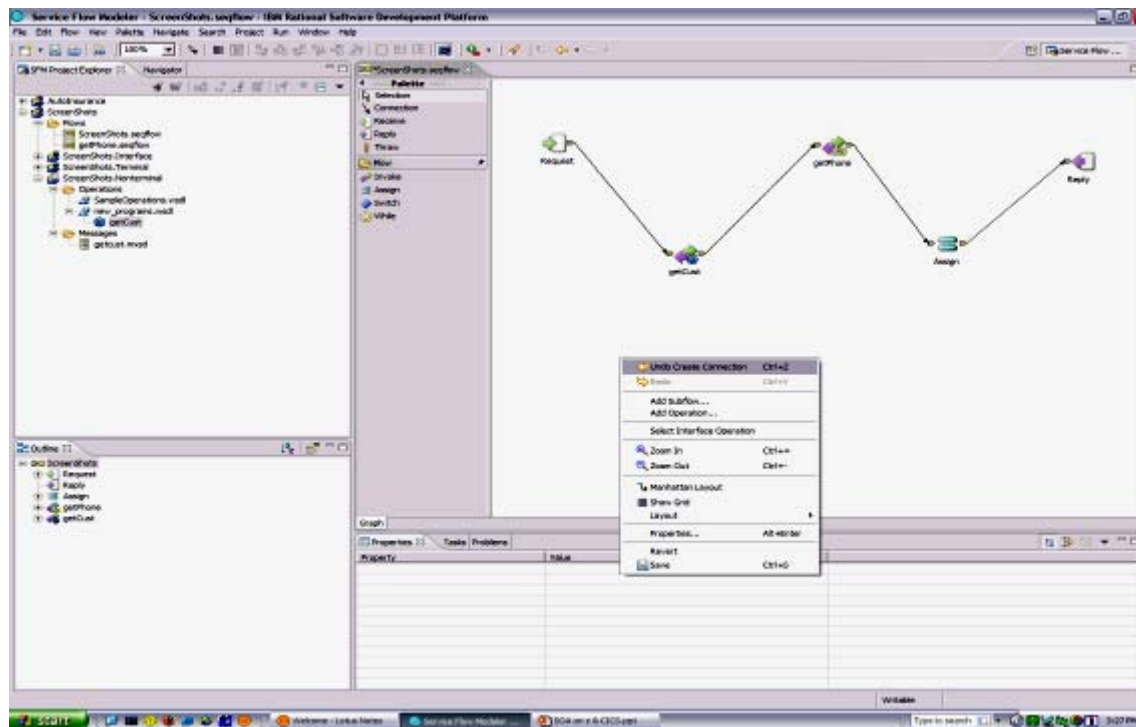

CICS Service Flow Feature

- Business Logic is often spread across multiple screen interactions
- The CICS Service Flow Feature allows you to sequence fine-grained CICS program and screen interactions into a higher level step
 - ▶ This can then be exposed as a web service
- Consists of:
 - ▶ CICS Service Flow Runtime in CICS TS V3
 - Runtime in CICS executes a sequence of terminal or commarea based interactions
 - ▶ Service Flow Modeler in Rational Developer for z
 - Visually design flow
 - Tool can record flow as user navigates through BMS screens
 - Use Web Services wizards and test facilities in RDz

DEMO: Service Flow Modeler

- Use Visual Designer in RDz
 - ▶ Record Screen interactions
 - ▶ Wire CICS programs together

What About IMS Assets?

- Use the **IMS SOAP Gateway** and **IMS Connect** in IMS V10
- Integrates IMS assets into SOA by providing a standard Web Services interface
 - ▶ Expose your IMS application as a web service with easy deployment and configuration
 - No programming needed
- Tooling support
 - ▶ IBM Rational Application Developer for System z generates Web Service artifacts like WSDL and XML converters
 - From COBOL copybook of IMS application
- Transforms XML data without changing IMS application
 - ▶ IMS Connect XML Adapter transforms XML data
 - No need to modify the IMS application code

Customer Self-Service Access

We want to provide a superior self-service experience for our customers...

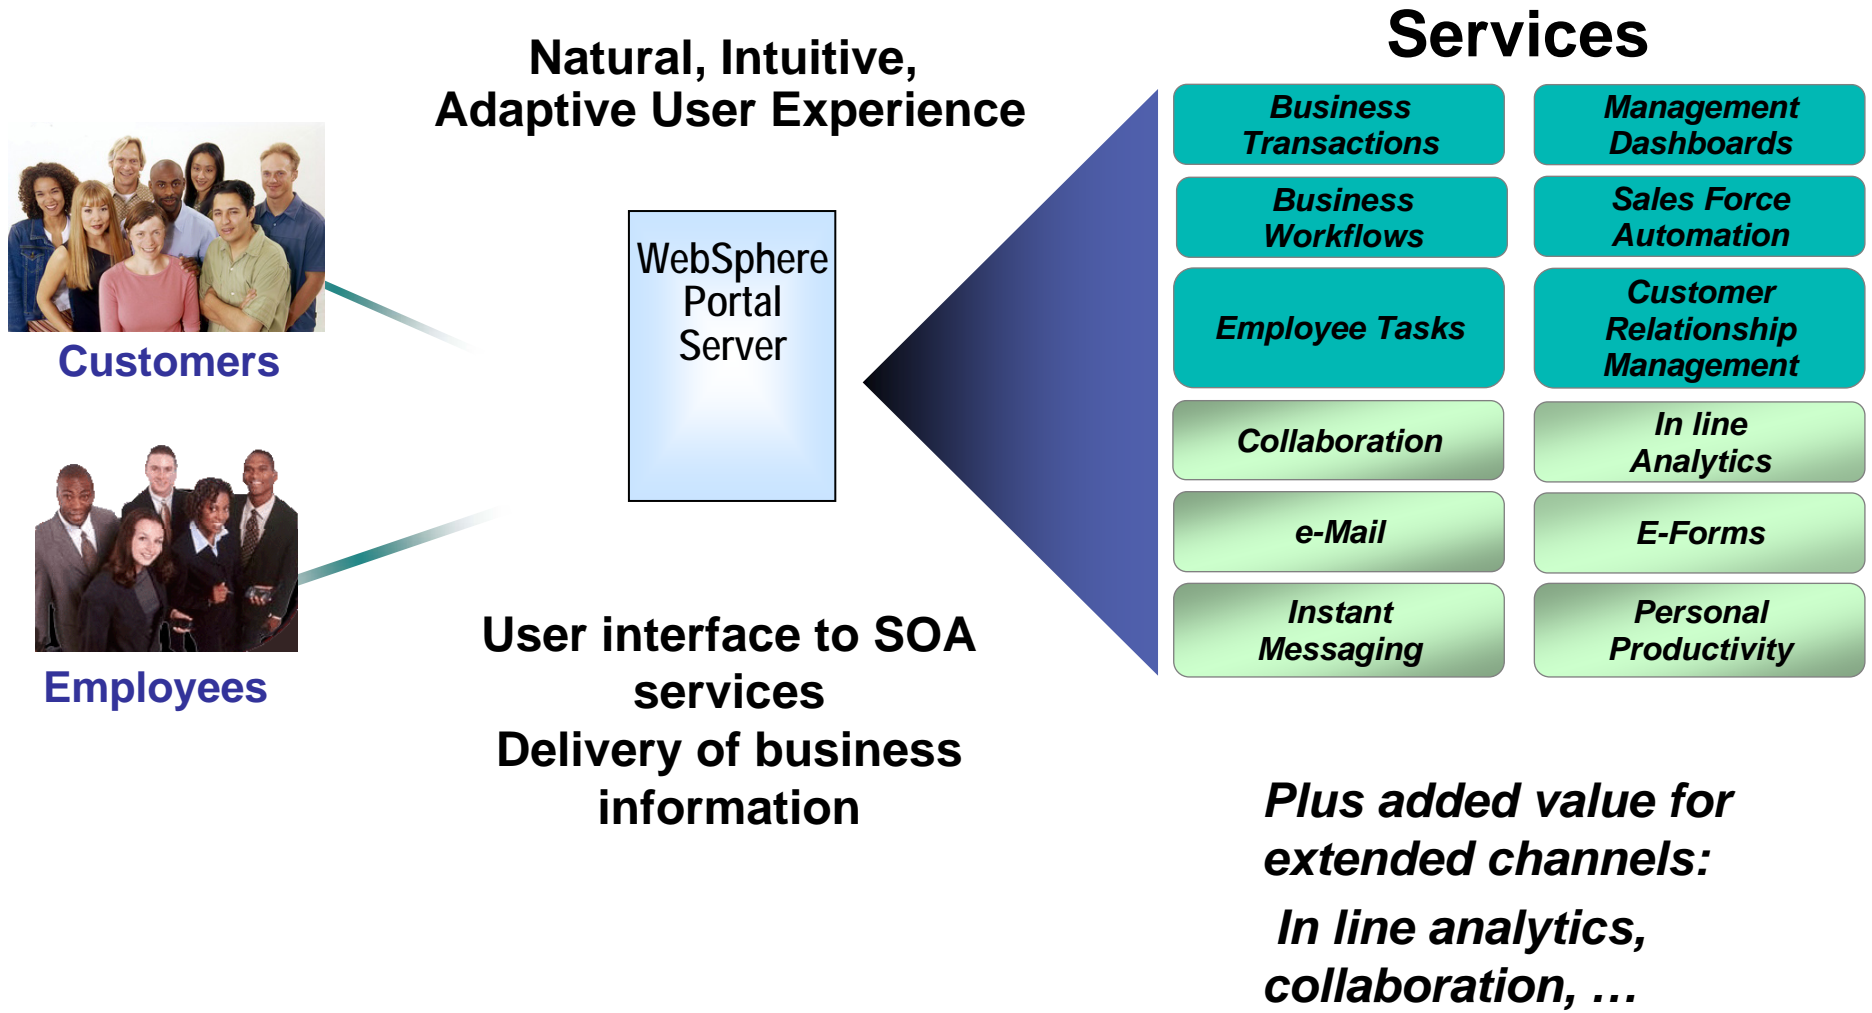

**Service Oriented Finance
CIO**

Use WebSphere Portal to build a customer facing portal

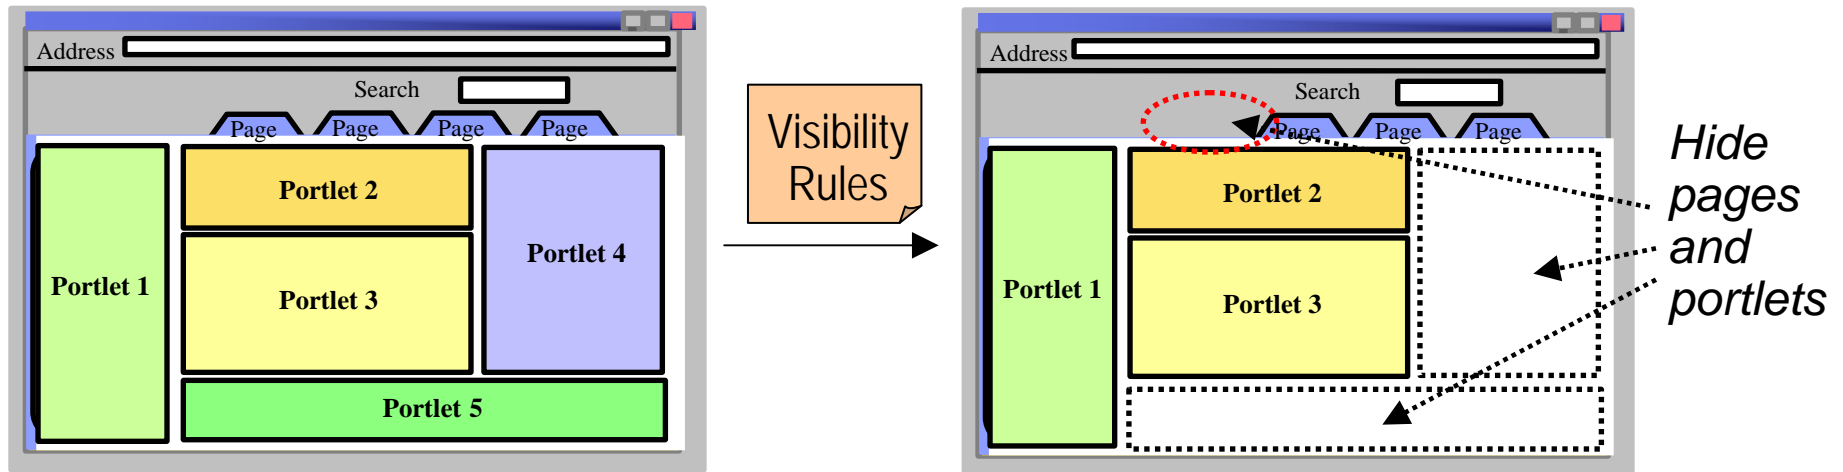

IBM

IBM WebSphere Portal Supports Extended Channels

Create a Specialized User Experience With Advanced Personalization

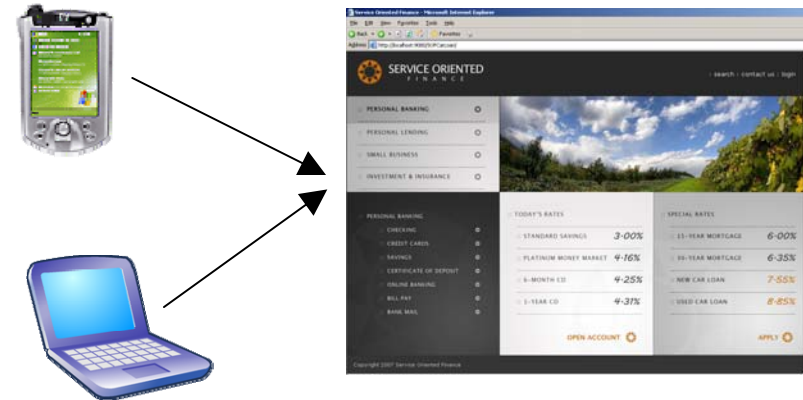

- Attribute-based personalization based on “visibility rules” allows for a more flexible and dynamic user experience
- Visibility rules instruct the portal to:
 - ▶ Show or hide pages and portlets...
 - ▶ ...based on dynamic characteristics that are determined at runtime...
 - ▶ ...according to business rules

DEMO: Service Oriented Finance Customer Portal

Customer Portal:

- ▶ Access using Browser and Mobile Client

Content Personalization:

Juan's Portal / Portlet View

Banking Accounts Portlet

User	Customer Account		
	Account	Balance	Type
juan	10001	\$300.23	CHECKING
	20001	\$50,289.55	SAVINGS
	30001	\$20,240.23	CD

Gold status prompts display of Private Banking portlet

Optimize Processing Of Car Loan Applications

The new channel is generating more new business! Our current manual processing can't keep up.

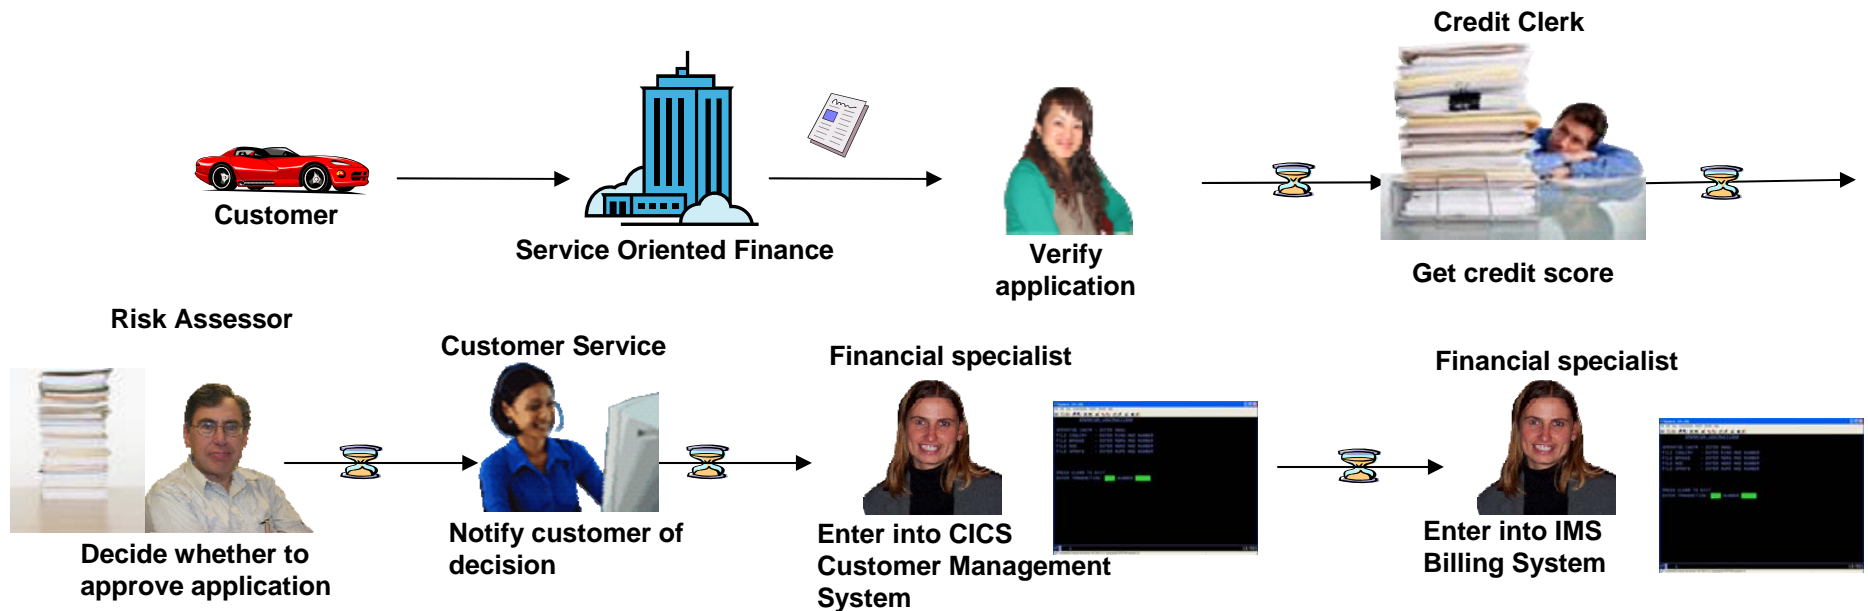

**Service Oriented Finance
CIO**

Create an improved process with WebSphere Process Server

IBM

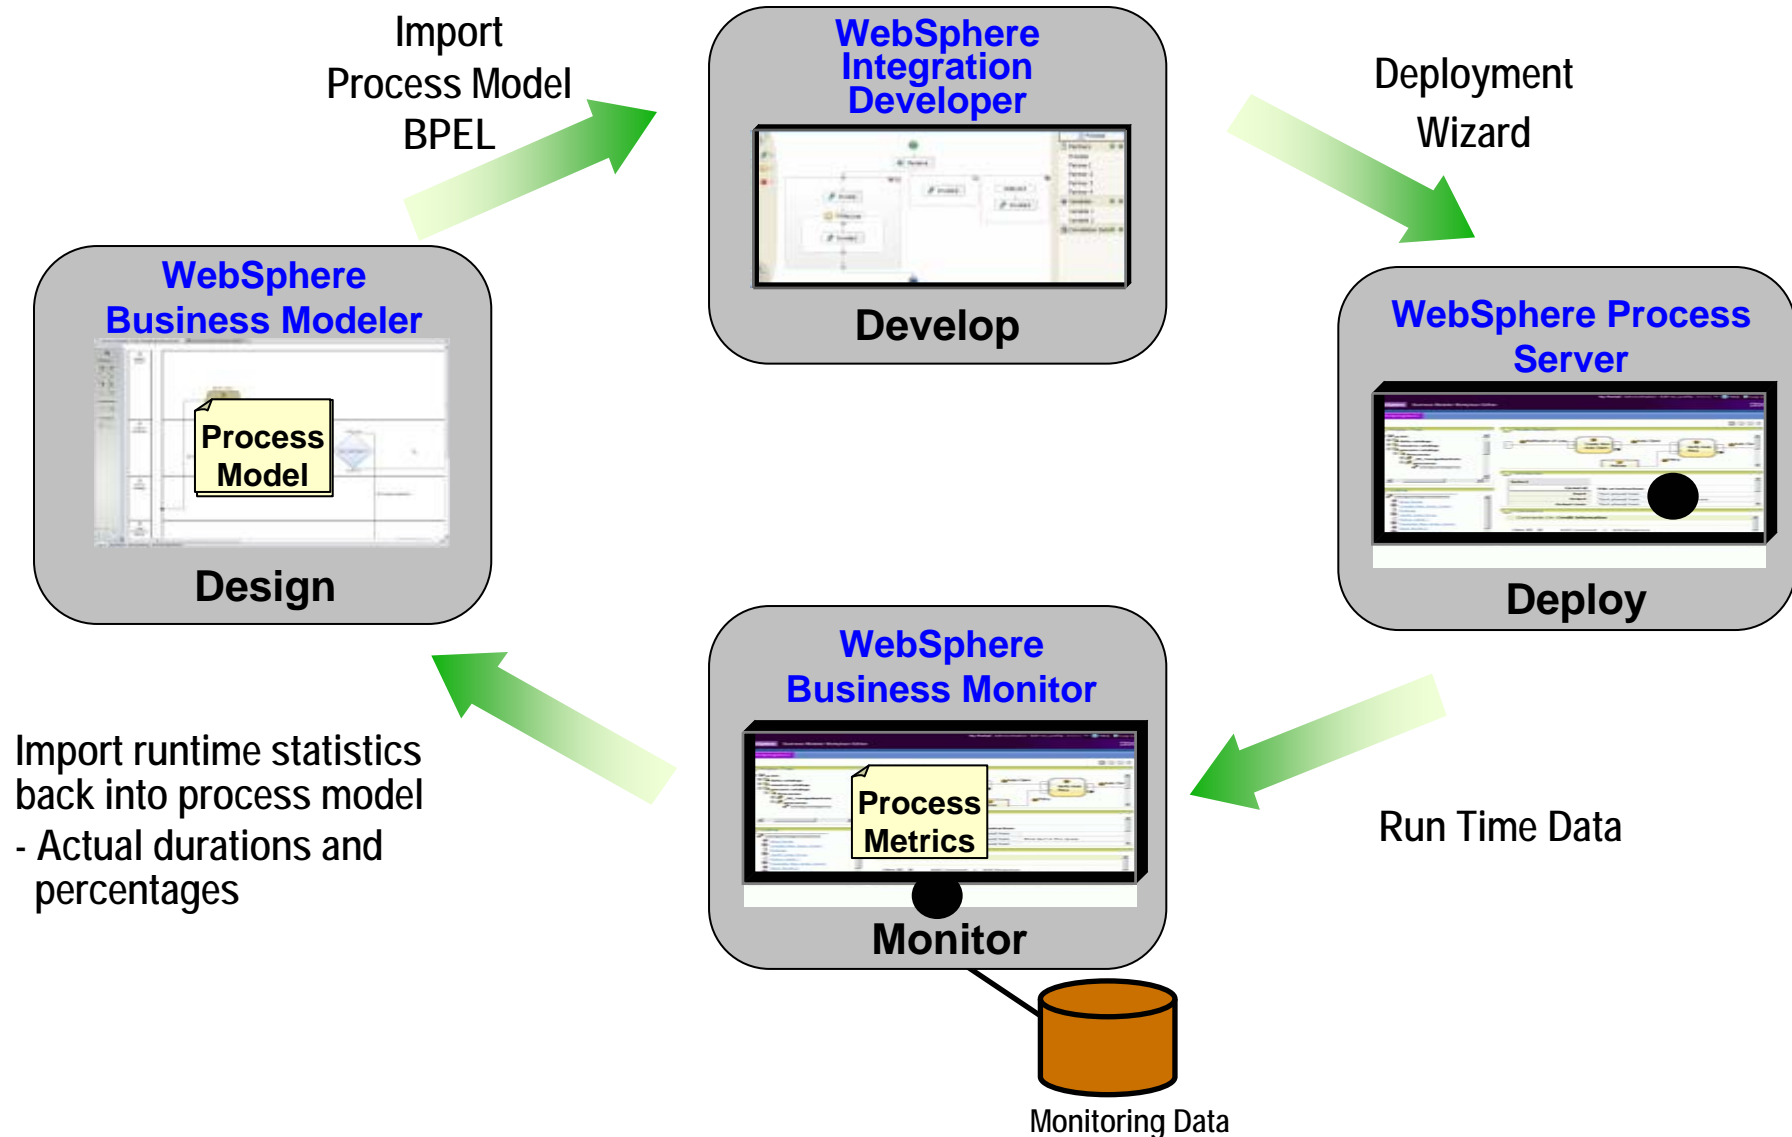

Current Process For New Car Loans

Issues with the current process:

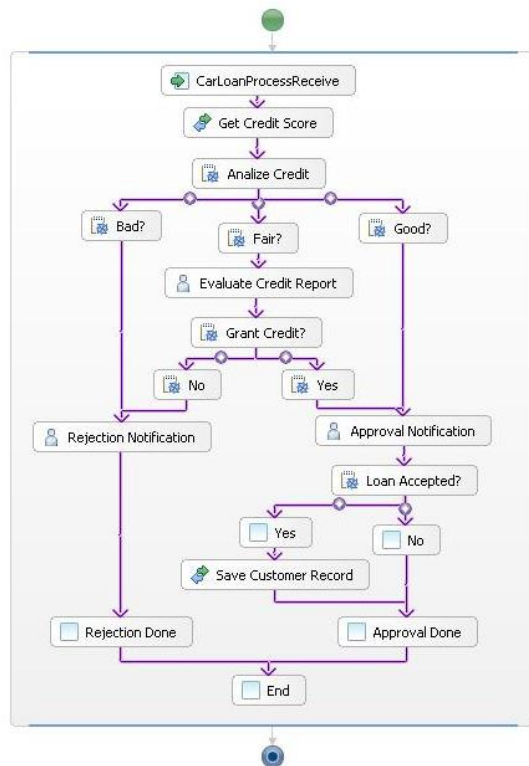

- Manual process won't scale
- Manual data entry results in errors
- Sequence of handoffs makes it difficult to determine status of any particular loan request

Design, Develop, Deploy, And Monitor The New Process

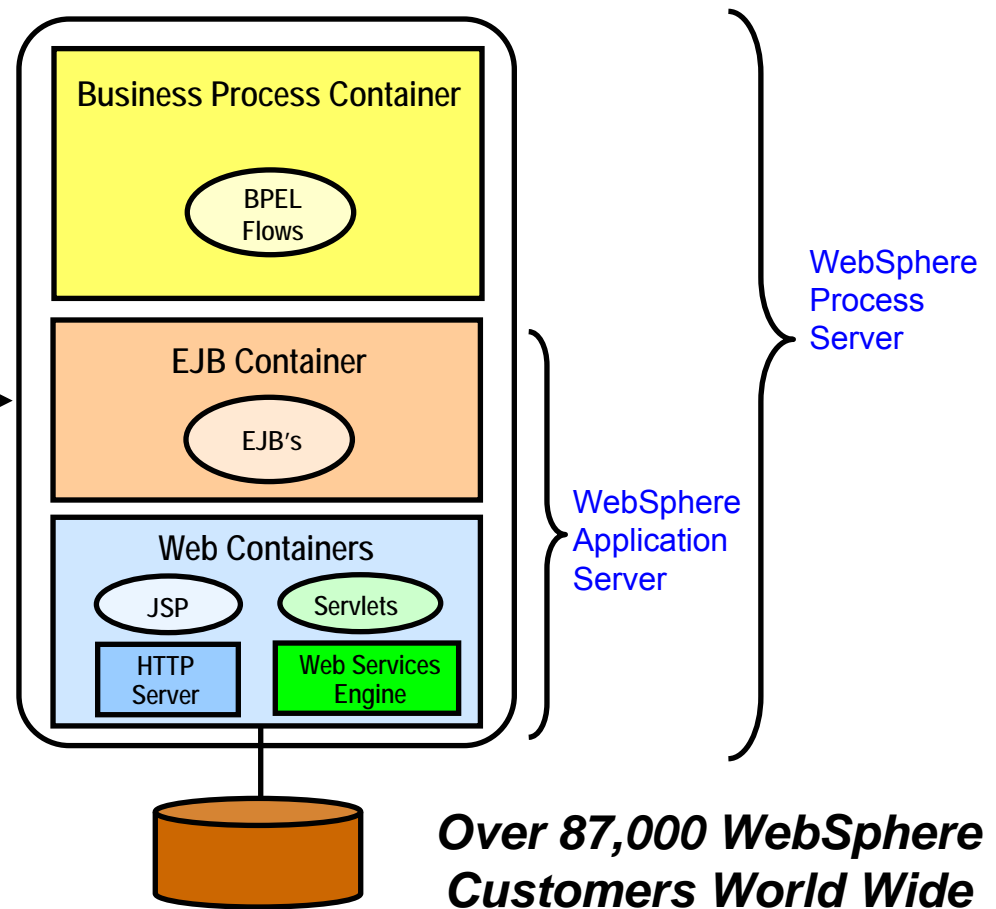

The Completed Process Runs On WebSphere Process Server (WPS)

- The completed BPEL process can be deployed easily to WPS
- WPS supports J2EE, web services, and BPEL flows on a unified code base

Deploy

DEMO: Run The New Car Loan Process

The screenshot displays the Websphere BPC Explorer interface in Microsoft Internet Explorer. The browser address bar shows the URL: <http://localhost:9080/bpc/faces/pages/ProcessInstanceDetailsView.jsp#>. The page title is "Process Instance".

On the left side, there is a navigation menu with the following sections:

- Process Templates
 - My Process Templates
- Process Instances
 - Started By Me
 - Administered By Me
 - Failed Compensations
- Task Templates
 - My Task Templates
- Task Instances
 - My Tasks
 - All Tasks
 - Initiated By Me
 - Administered By Me
 - My Escalations

The main content area shows the "Process Instance" details for "O2CProcess". The state is "Finished". Below this, there are "Available Actions" buttons: Compensate, Terminate, Delete, Suspend, Resume, Restart, Activities..., and Tasks....

The "Process Description" section shows:

- Process Instance Name: O2CProcess
- Description: [Empty]
- State: Finished

Below the description is a tabbed interface with tabs for Details, Process Input Message, Activities, Events, Tasks, and Custom Properties. The "Activities" tab is selected, showing a table of activity logs:

Activity Name	State	Activity Kind	Owner	Activated
SendToFinance	Finished	Invoke		3/30/06 12:02:36 PM
SendToWarehousing	Finished	Invoke		3/30/06 12:02:34 PM
SendToERP	Finished	Invoke		3/30/06 12:02:16 PM
Credit Check	Finished	Invoke		3/30/06 12:02:14 PM
Sales Rep Approval	Finished	Staff	inst1	3/30/06 12:02:14 PM
Large Order Business Rule	Finished	Invoke		3/30/06 12:01:44 PM
Receive Order	Finished	Receive		3/30/06 12:01:40 PM

At the bottom of the table, it says "Items found: 7 << Page 1 of 1 >>".

- Submit new loan application through Portal
- Process-level monitoring
- Human workflow – Work list gets populated with tasks

Employee-Facing Portal

We want our customer service center to provide better customer satisfaction

**Service Oriented Finance
CEO**

WebSphere Portal also provides easy access to business information and applications for your employees

IBM

Employees Need Easy Access To Business Information

- Customer service representative needs multiple screens
- Data not stored in a way to support conversations
- Customer ends up waiting on the phone, repeating information

Can you increase the limit on my credit card?

Customer

This might take a while.
Please hold while I look up your information

**Service Oriented Finance
Customer Service Representative**

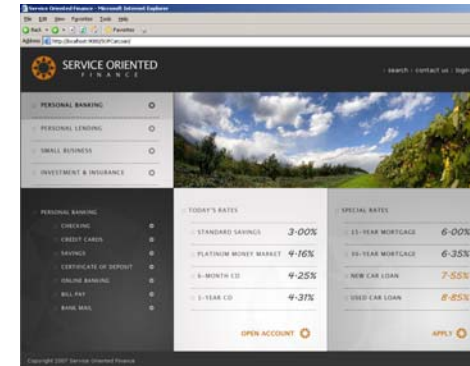

Channels Can Deliver Operational Intelligence With Embedded Analytics

- In-line Analytics for Guided Analysis
 - ▶ Embedded into existing processes and web applications
 - ▶ Combines operational information (i.e. current point in time) with data warehouse (historic) information
 - ▶ Real-time
 - ▶ Suitable for large volumes of requests

- Use Alphablox to Embed Analytics
 - ▶ Prebuilt Blox (dashboards, KPI's, charts, scoreboards) to deliver embedded analytics with web applications
 - Extends business insight without programming!
 - ▶ Can run as portlet or web application on System z

DEMO: Customer Service Center Employee Portal

- Customer service representative uses inline analytics to make a real-time decision

Customer Service Representative**

Deployment Decisions

What platform should I use to deploy these channel solutions?

**Service Oriented Finance
CIO**

System z is an ideal platform for your SOA solutions

IBM

Why SOA On System z?

1. Qualities Of Service

- An effective SOA implementation requires very high Quality of Services (QoS) from the underlying environment
 - ▶ Continuous Availability/Disaster Recovery
 - ▶ Scalability and Clustering
 - ▶ Rock-solid Security
 - ▶ Workload Management to handle peak demand
- *These are fundamental characteristics of System z, making it an ideal platform to deploy an SOA solution*
- IBM's core SOA framework runs on z/OS
 - ▶ WebSphere Application Server
 - ▶ WebSphere Process Server
 - ▶ WebSphere Portal Server
 - ▶ WebSphere Enterprise Service Bus

Why SOA On System z?

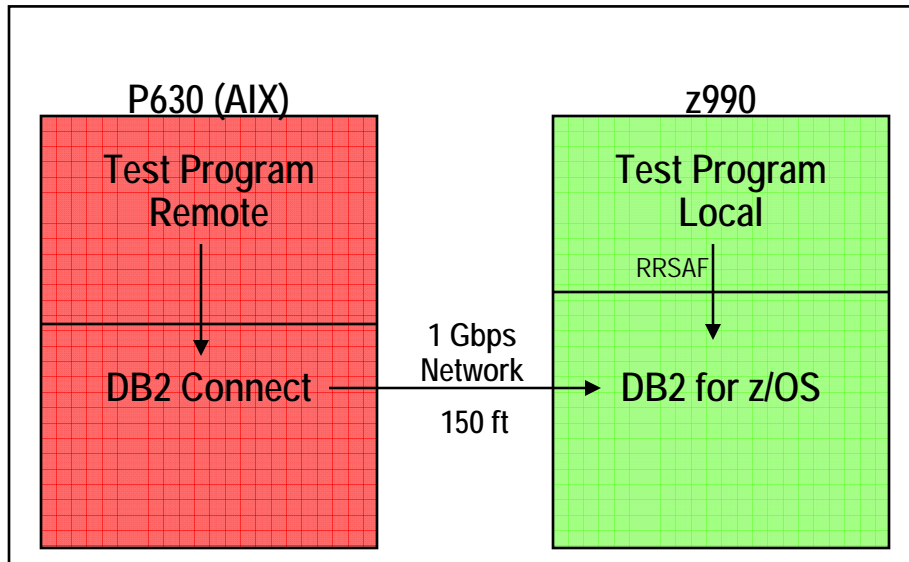

2. Co-location

- The mainframe already houses the core CICS and IMS applications and data for the business
 - ▶ Quickly expose them as services, and continue the QoS the business depends on
- Having the Process Server and Portal Server in close proximity to each other and the assets they access provides better performance and throughput
- HiperSockets technology means less network overhead
 - ▶ Memory to memory communication

Co-located Environments Maximize Throughput

IBM Study Shows Effects Of Network Latency On SQL Processing

Test Configuration

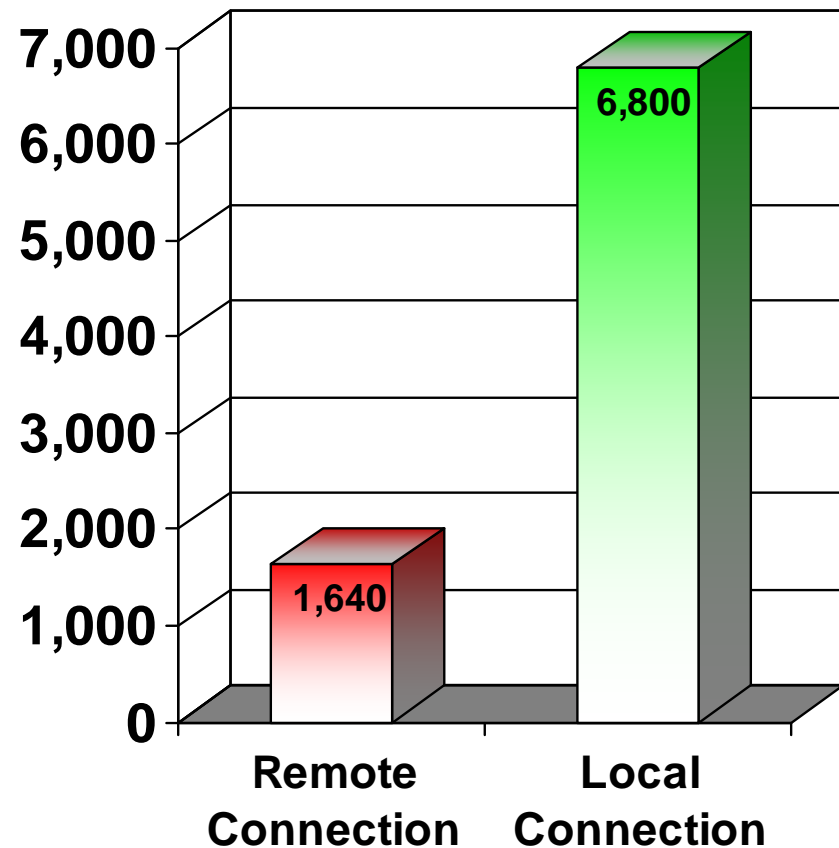

Why the big difference in SQL throughput?

- Elimination of network latency incurred by remote database connections increased SQL throughput **4x!**
- Hipersockets provide this benefit for consolidated applications on zLinux

Results:

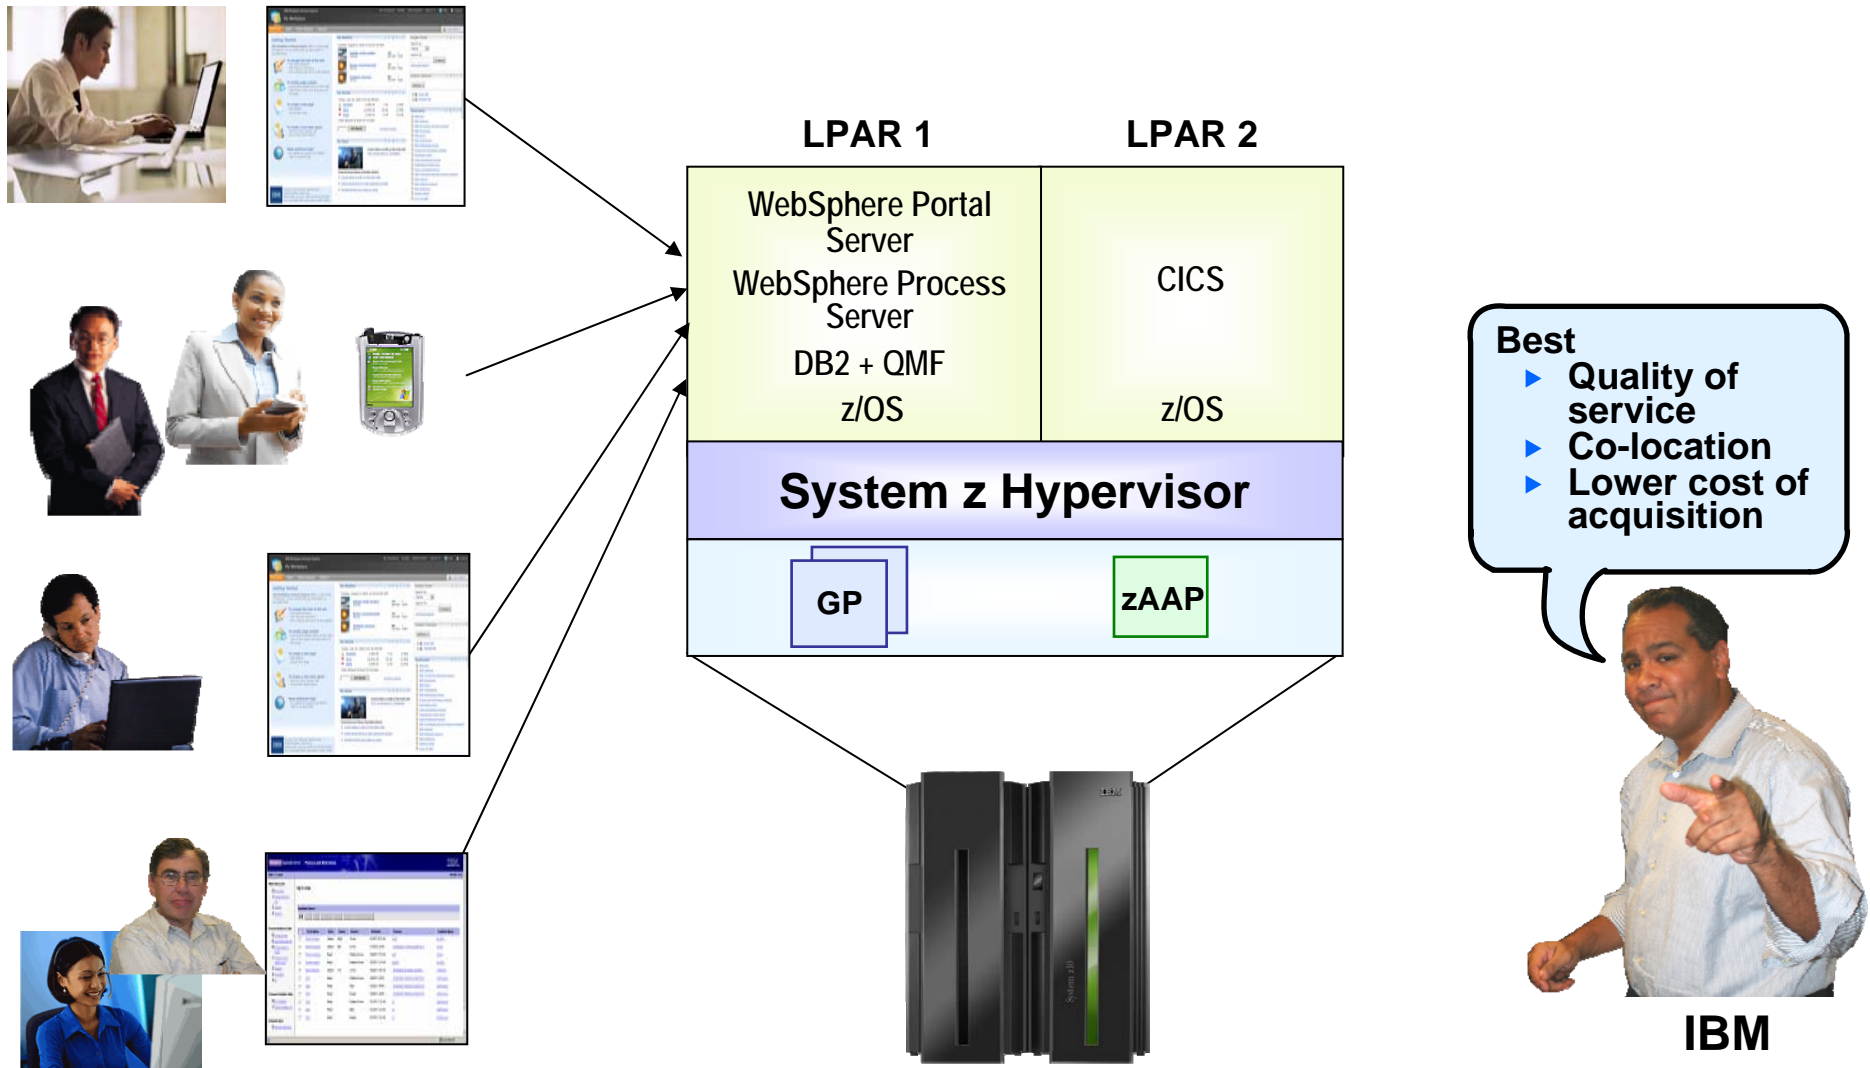

SQL Statements / Second
