

System z Enables Solutions For A Smarter Planet

Enterprise Systems Management

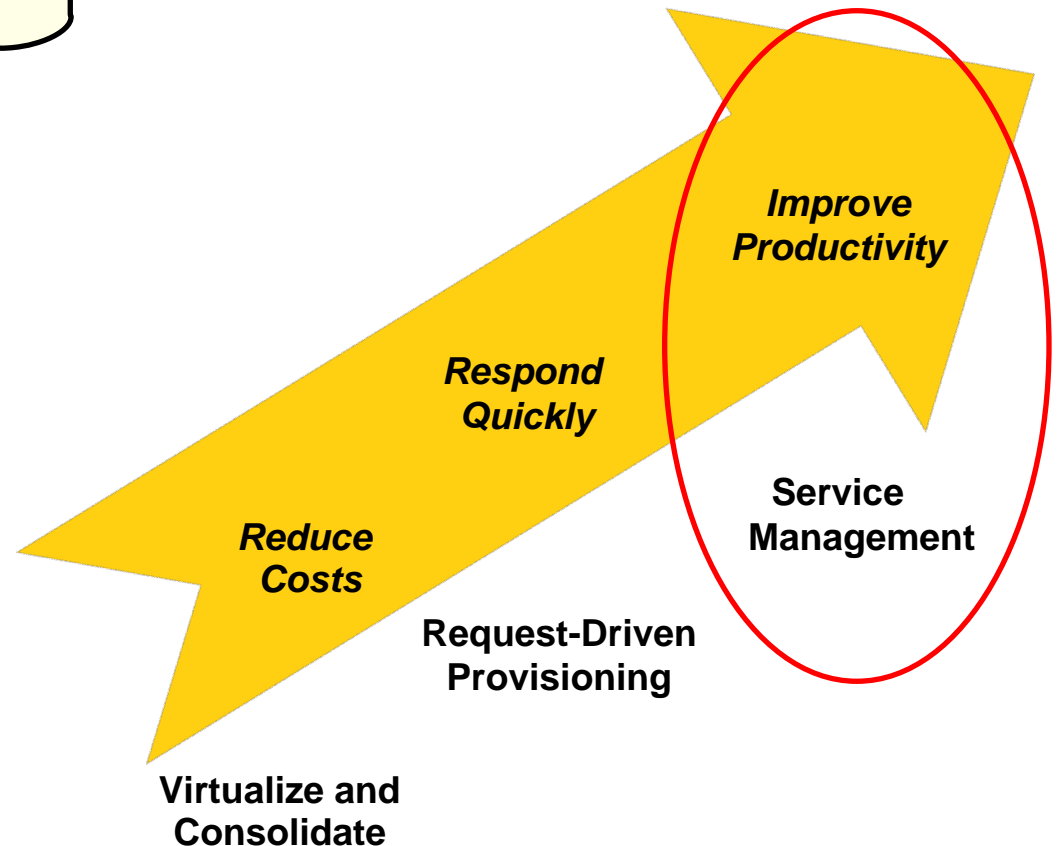

Dynamic Infrastructure For A Smarter Planet

My cost of labor is very high!

**Service Oriented Finance
Data Center Manager**

Let's Focus

Data Centers Need A Service Management Hub To Meet Service Levels And Reduce Costs

Visibility

See issues end-to-end in business context

Respond faster and make better decisions

Control

Standardize IT processes and provide self-service

Improve quality and reduce mistakes

Automation

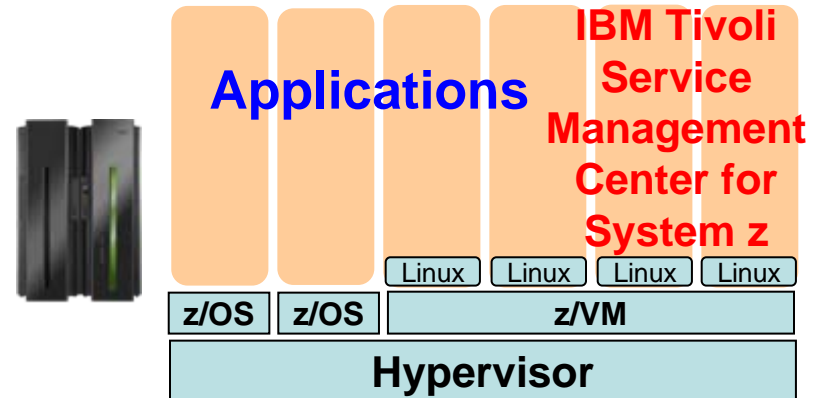

Automate repeating tasks to simplify

Lower costs and build agility

Solution: *IBM Tivoli Service Management Center for System z*

Mainframe As A Service Management Hub

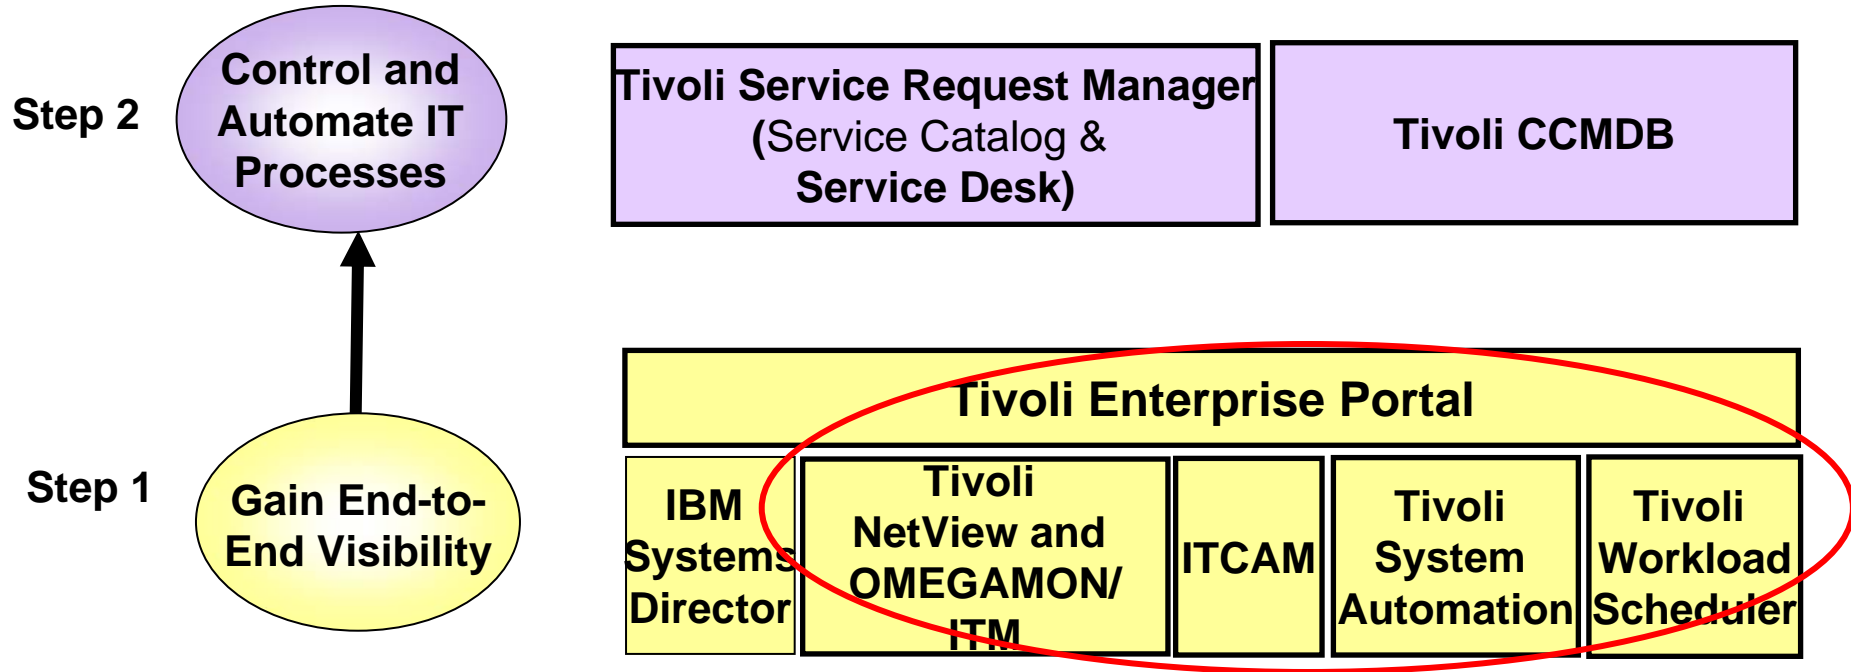

- Consolidate management on the mainframe
 - ▶ Service Management hub on Linux on z
 - ▶ z/OS supported as a managed system
- Manage the Dynamic Infrastructure
 - ▶ Best practices
 - ▶ Productivity
 - ▶ Lowest Cost

Applications
Systems Management

A Step By Step Approach To Implementing Tivoli Service Management Center For System z

Visibility... Control... Automation

Tivoli Enterprise Portal (TEP) – A Common Monitoring Dashboard On System z

■ Resource status/health from various event sources:

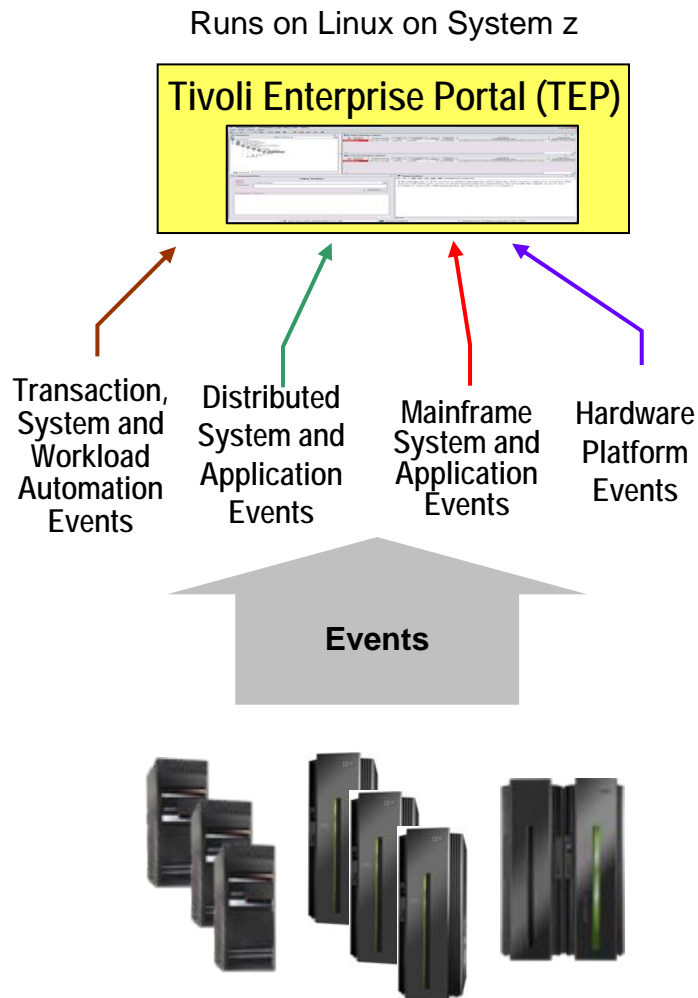

- ▶ Hardware events from **IBM Director**
- ▶ Mainframe events from **Tivoli OMEGAMON**
- ▶ Distributed events from **Tivoli Monitoring (ITM)**
- ▶ Transaction events from **Tivoli Composite Application Manager (ITCAM)**
- ▶ System automation events from **Tivoli System Automation (TSA)**
- ▶ Batch workload events from **Tivoli Workload Scheduler (TWS)**
- ▶ Events from 3rd party monitors

■ Detect incidents with *situations*

- ▶ Out-of-the-box supplied *situations* include combination of metrics and thresholds
- ▶ Built-in situation editor allows to customize

■ *Expert advice* helps obtain detailed explanation and recommendation for resolution

■ *Take action* to automatically resolve recurring problems with existing or customized scripts

Visibility to What's Going On

End-To-End Visibility With Intelligent Monitoring

Tivoli Enterprise Portal (TEP)

Single interface for management

Runs on Linux on System z

Retrieval, manipulation and analysis of data

Runs on Linux on System z

Collect and correlate monitoring data

Runs on Linux on System z and z/OS

Intelligent monitoring agents on systems send events

DEMO: Tivoli Enterprise Portal (TEP)

- Monitor resources end-to-end with workspaces
- *Situations* triggered by problems, for example:
 - ▶ CICS application not responding
 - ▶ DB2 application has issues

The screenshot displays the Tivoli Enterprise Portal (TEP) interface. The top window is titled "Enterprise Status - 192.169.1.54 - SYSADMIN *ADMIN MODE*". The interface is divided into several panes:

- Navigator:** A tree view showing the hierarchy of monitored resources, including Linux Systems, z/10 Items, z/9ccmdb, DB2, Linux OS, Web Server Agent - Primary, WebSphere Agent - Primary, z/inos, z/inosmaps, Windows Systems, and MS Systems. A red arrow points from the "Enterprise" root node to the "Situation Event Console" table.
- Situation Event Console:** A table displaying active situations. The table has columns for Severity, Status, Owner, Situation Name, Display Item, and Source. Three rows are highlighted in red, indicating critical situations:

Severity	Status	Owner	Situation Name	Display Item	Source
Critical	Open		WebServicePipeline_Critical		ADCD.CICSA
Critical	Open		WASNotConnected	MXServer	Primary:z9ccmdb:KYNA
Critical	Open		UDB_Status_Warning		db2inst1:z9ccmdb:UD
- Open Situation Counts - La...:** A bar chart showing the count of open situations for various categories. The categories include WebServicePipeline_Critical, WASNotConnected, WASError, UDB_Status_Warning, MS_Offline, Linux_Process_High_Cpu, Linux_Low_percent_space, Linux_High_CPU_Overload, KSY_TEPS_Connectivity_Fail, and CICSplex_RTAGroup_Warning. A red arrow points from the "CICSplex_RTAGroup_Warning" bar to the "CICS application not responding" bullet point in the list.
- My Acknowledged Events:** A table showing a list of acknowledged events with columns for Severity, Status, Owner, Situation Name, Display Item, Source, Impact, Opened, Local Timestamp, Type, and Reference ID.
- Message Log:** A table showing a log of messages with columns for Status, Name, Display Item, Origin Node, and Global Timestamp. The log shows several open situations, including WebServicePipeline_Critical, Linux_Low_percent_space, MS_Offline, WASNotConnected, and UDB_Status_Warning.

The bottom status bar shows the Hub Time as Mon, 09/08/2008 10:21 PM, Server Available, and Enterprise Status - 192.169.1.54 - SYSADMIN *ADMIN MODE*. The taskbar at the bottom includes icons for Start, IBM Tivoli Net..., MAXIMO - Start..., Netcool/OMNIB..., Netcool/OMNIB..., Mozilla Firefox, and Enterprise St... with the time 10:11 PM.

A Dynamic Role-based Portal for End-to-End Monitoring!

Tivoli NetView And Tivoli OMEGAMON XE – Monitor Mainframe Resources

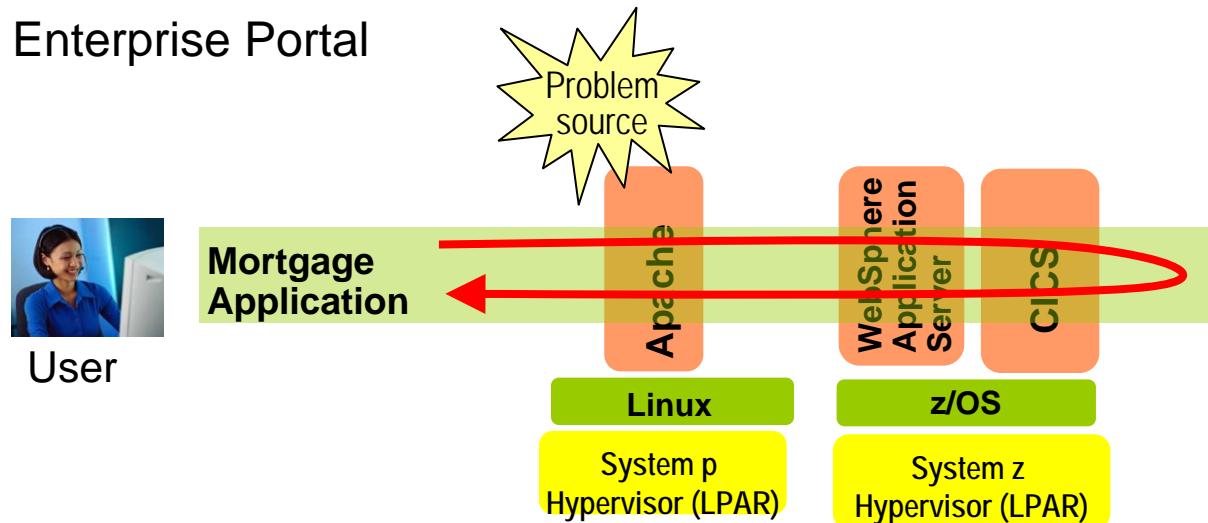

- Tivoli NetView and Tivoli OMEGAMON XE agents for mainframe servers
 - ▶ *NetView on z/OS* – monitor and control TCP/IP and SNA networks to help maintain high availability
 - ▶ *OMEGAMON XE on z/OS* – monitor key resources such as CPU, LPARs, I/O, network, enqueue, paging, zIIP, zAAP, Cryptoprocessors
 - ▶ *OMEGAMON XE on z/VM and Linux* – monitor z/VM and Linux usage of resources such as CPU, network, storage
 - ▶ *OMEGAMON XE for Mainframe Networks* – collect data and diagnose network performance issues across z/OS systems
 - ▶ *OMEGAMON XE for DB2 PM/PE on z/OS* – monitor performance of DB2 in a z/OS environment
 - ▶ *OMEGAMON XE for IMS on z/OS* – manage IMS systems
 - ▶ *OMEGAMON XE for CICS on z/OS* – manage CICS systems

Tivoli Monitoring – Monitor Distributed Resources

- Tivoli Monitoring agents for distributed servers
 - ▶ *Monitoring (base)* – monitor system resources such as CPU, I/O, network
 - ▶ *Monitoring for Database* – monitor availability and performance of distributed databases such as DB2, Oracle, Microsoft SQL Server
 - ▶ *Monitoring for Business Integration* – manage IBM WebSphere MQ, WebSphere MQ Integrator, WebSphere MQ Workflow and IBM WebSphere Interchange Server
 - ▶ *Monitoring for Applications* – monitor SAP
 - ▶ *Monitoring for Messaging and Collaboration* – monitor Lotus Domino

Tivoli Composite Application Manager (ITCAM) – End-To-End Transaction And SOA Management

- Tracks transaction performance end-to-end across multiple physical and/or virtual systems to isolate bottlenecks quickly
 - ▶ Isolate source of performance problem across web servers, WebSphere and WebLogic application servers, CICS, IMS and DB2 subsystems, as well as ERP environments
- Monitors and performs simple control of message traffic between Web services in the SOA environment
 - ▶ Filter messages based on user-configurable criteria
- Sends events to Tivoli Enterprise Portal

Visibility to Track End-To-End Transactions

Tivoli System Automation (TSA) – Automate System Operations

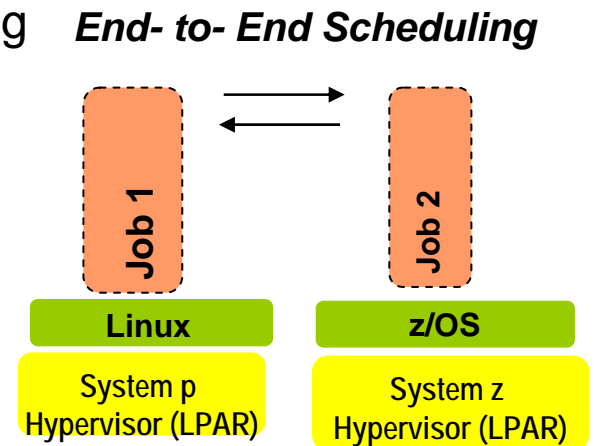

- Automate operations on hardware, I/O and applications
- No Scripts, policy-based automation
- Can manage relationship between resources and grouping of resources to automate at application level
- Includes out-of-the-box automation modules for middleware such as IMS, CICS, DB2, mySAP, WebSphere
- Can enable end-to-end application startup and shutdown across System z and distributed platforms
- Sends events to Tivoli Enterprise Portal

Automate Routine Operations

Tivoli Workload Scheduler (TWS) – Batch Workload Automation

- Enables planning for hundreds of thousands of jobs, resolves interdependencies, launches and tracks each job
- Powerful calendar-based and event-based scheduling capabilities
- Automatic recovery of jobs
- Workload Manager (WLM) integration to optimize resource utilization and favor late critical jobs
- Provides a single point of control for System z workloads or enterprise-wide workloads in end-to-end environments
- Sends events to Tivoli Enterprise Portal

Automate Job Scheduling

Control And Automate IT Processes

One of my key staff members is leaving.
My new employees don't have the experience to handle problems when they come up.

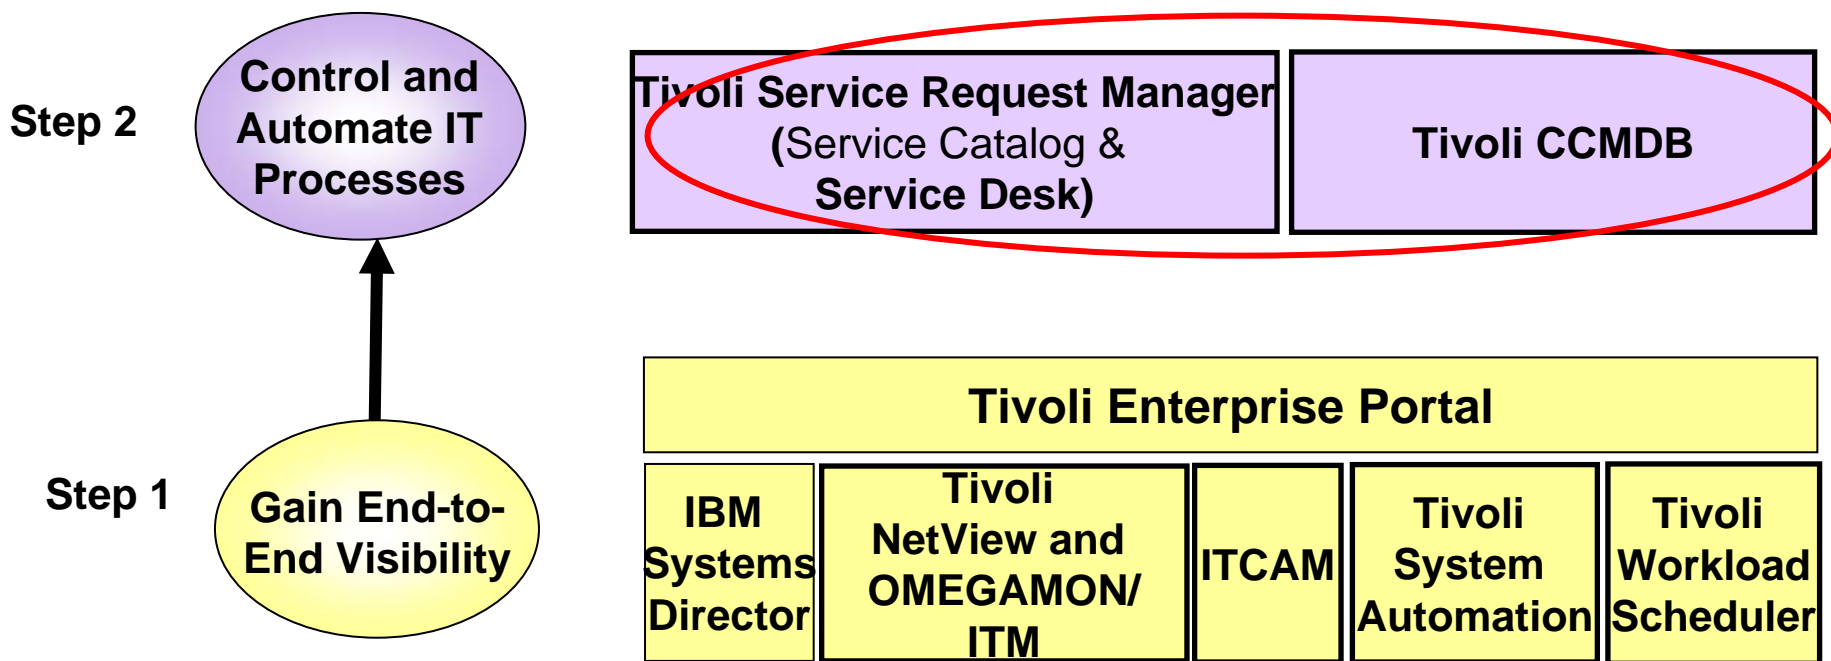

Data Center Manager

New Employee

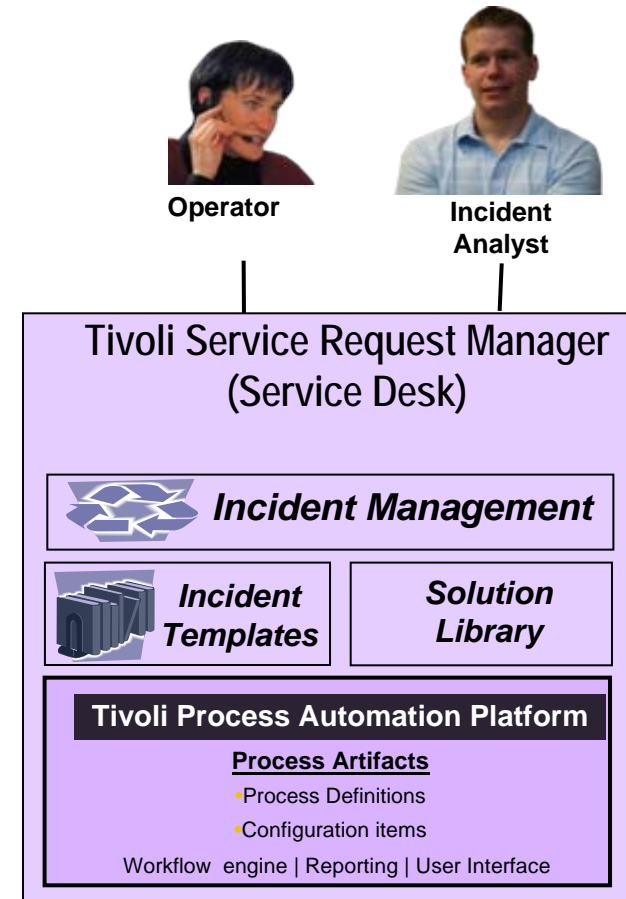

A Step By Step Approach To Implementing Tivoli Service Management Center For System z

Visibility... Control... Automation

Tivoli Service Request Manager (Service Desk) – Control Incident Management Process

- Central point to control service requests for help, information and service
- Create incident templates for common service desk calls and library of reusable solutions
 - ▶ Use templates to quickly create tickets
 - ▶ View updates and search library for solutions
- Automate incident management process
- ▶ Built on the common Tivoli Process Automation Platform to enable integration with other processes via common UI, common workflow engine, common database

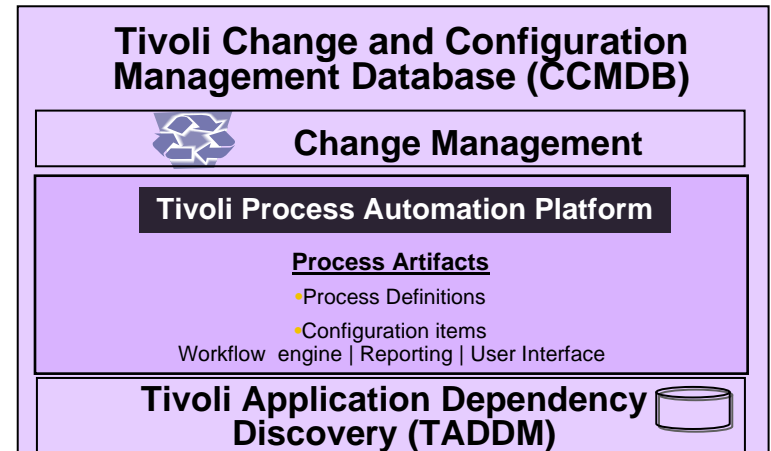

Runs on Linux on System z

Capture and Execute Best Practices

Tivoli Change And Configuration Management Database (CCMDB) - Discover And Manage Changes

- Discover assets and keep track of changes
 - ▶ Discovery library adapter for z/OS
 - ▶ 200 out-of-the-box sensors discover distributed resources
- Automated dependency mapping via application descriptors
 - ▶ Capture information about modules in business applications via descriptors
- Leverages common Tivoli Process Automation Platform to enable integration of change process with other processes
 - ▶ Common UI
 - ▶ Common workflow engine
 - ▶ Common database

Out-of-the-box
Automated
Discovery

Auto Discover New Assets

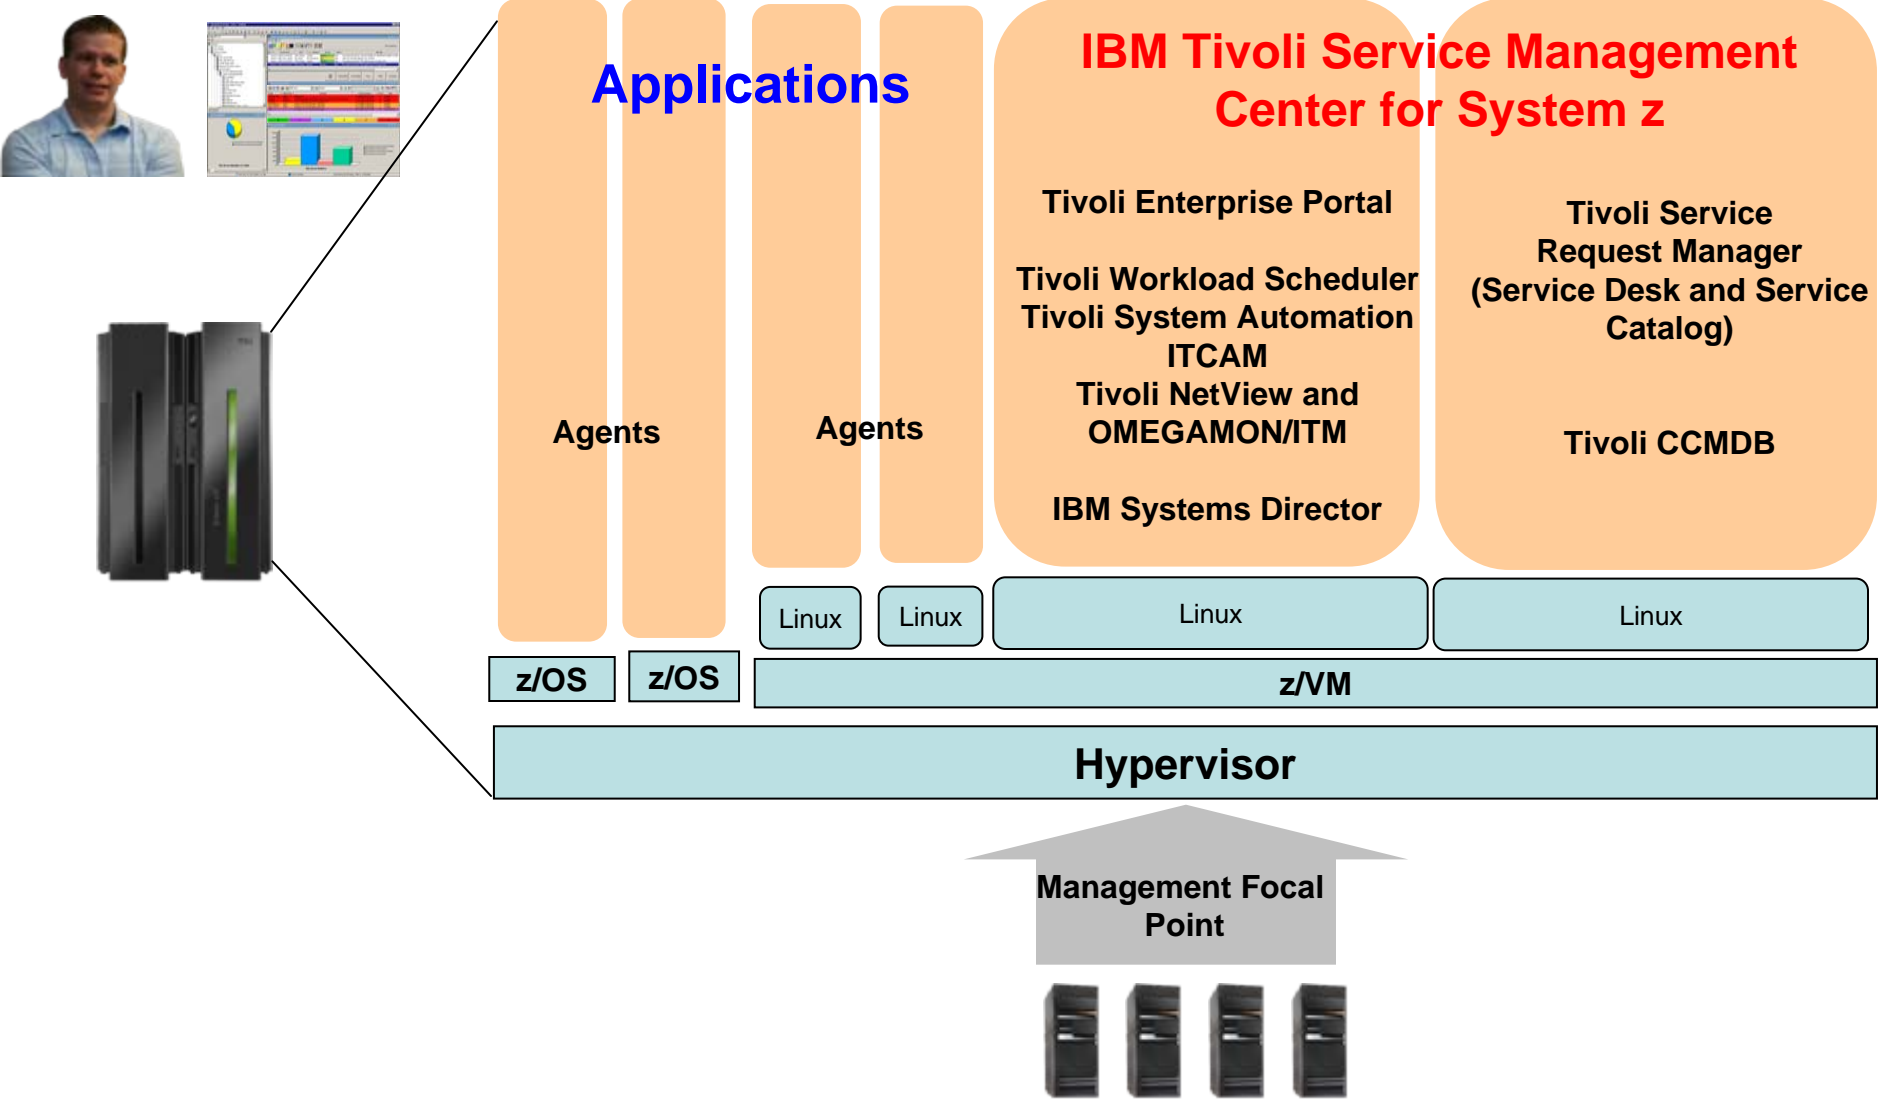

Tivoli CCMDB - Control And Automate Change Management Process

- Associate change window with configuration items (managed assets)
 - ▶ Check for schedule conflicts
 - ▶ Prevent changes from occurring outside defined window

- Identify the impact of implementing a change
 - ▶ Identify and record impacted configuration items using discovered relationship data
 - ▶ Subject Matter Experts can document assessment results
 - ▶ Get Approvals from all stakeholders before implementing change

- Out-of-the-box best practices and customizable change management process

Mainframe As A Service Management Hub With Tivoli Service Management Center For System z

System Management Software Costs Less On A Consolidated zLinux Platform

Here are more cost savings...

It costs less to install system management software on zLinux than it does to install comparable software in the unconsolidated environment

IBM

Tivoli Solution Used to Manage 100 Distributed Linux Servers

100 Servers (200 PVU or Quad-core for each server)

100 apache
100 WAS
100 DB2

3 authorized administrator licenses; 8 concurrent administrator licenses*
