

Web access to IMS applications and data

Attend one of our free application development education seminars to learn how to leverage the scalability and performance of your current IMS solutions for new application development

Application development teams are under continuous pressure to deliver more, faster. These pressures are particularly evident in the area of information access, that is, the need to make information available now and wherever it is needed – for example, on the Web for customers and employees, and in the hands of corporate decision-makers. Enabling new and existing Web-based applications to access this information is critical to growing business and helping to reduce application development costs.

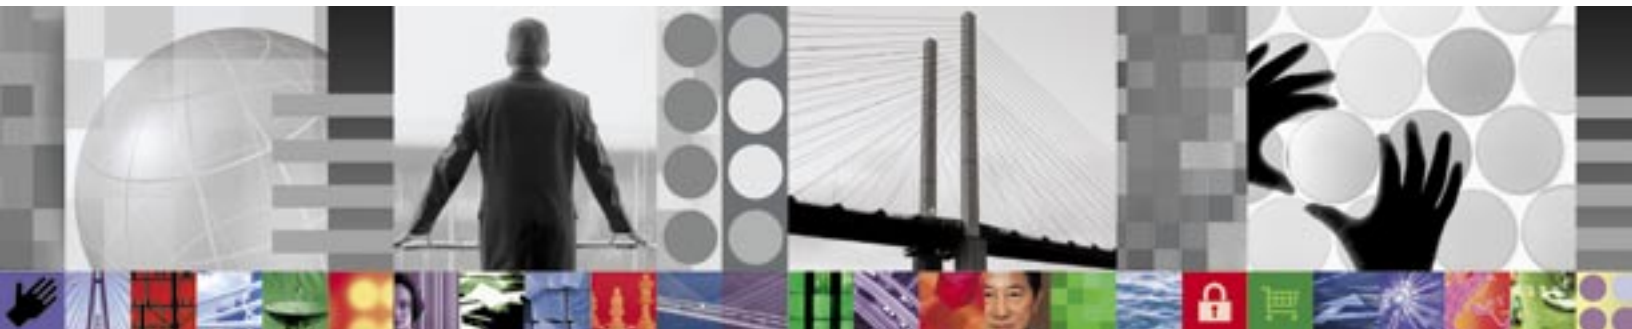

Join us for this full-day seminar and learn how new application development architectures, tools and IBM's Service Oriented Architecture capabilities for IMS™ can help your business improve the speed and agility of its development efforts. By attending this seminar, you'll also have the opportunity to interact with IBM technical professionals who have extensive experience in application development tools and infrastructure.

If you're an application developer, architect or owner, a business analyst, or an IT or SOA architect, you'll come away with valuable information about IMS and SOA and how it can help you

- *Use Java™ and .NET™ skills for new application development in, or with, IMS*
- *Blend new technologies into your existing IMS infrastructure efficiently with minimal IMS skills and effort*
- *Leverage technologies such as XML, Web services, JDBC™, XQuery and BPEL for your IMS environment*
- *Reduce new programming efforts by extending the capabilities of your current IMS applications*
