Extend Your Enterprise Applications to Mobile Devices

Peter Pang

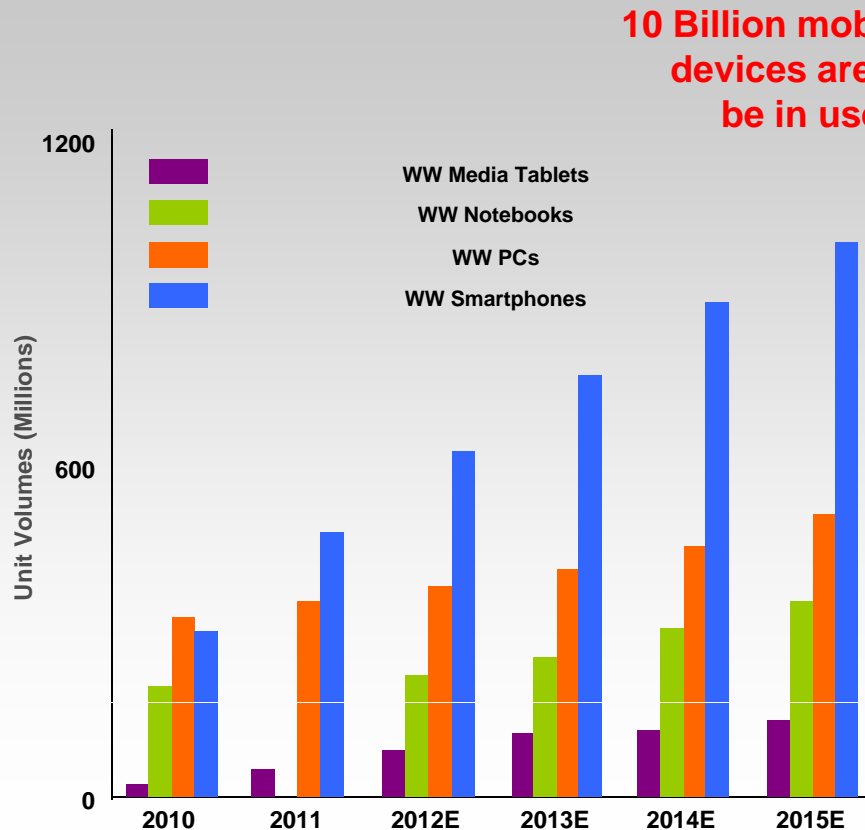

Sales Leader, Asean
Cast Iron and DataPower Appliances
pangp@sg.ibm.com

Mobile has now surpassed PCs.

Growth in Internet Connected Devices

10 Billion mobile connected devices are expected to be in use by 2020.

 "Fostering the People: The Shift to Engagement Apps"

Pulse Comes to You 2012

Mobile and Cloud are top spending priorities for CIOs¹

Dramatic Growth in Mobile Devices

- Mobile data traffic exceeded voice in 2010²
- Shipments of Smartphones exceeded total PC shipments for the first time in 2011³
- 10 Billion mobile connected devices are expected to be in use by 2020³

Mobile apps have moved beyond games

Business to Consumer

- Improved customer satisfaction
- Deeper customer engagement and loyalty
- Increased sales through personalized offers
- Customer service
- Competitive differentiator
- Improve brand perception
- Deeper insight into customer buying behavior for up sell and cross sell
- Improved buying experience with mobile concierge services

Business to Enterprise

- Extend existing applications to mobile workers
- Increased worker productivity
- Faster business processing
- Increased employee responsiveness and decision making speed
- Reduced fuel, gas, or physical asset maintenance costs
- Increase revenue through sales engagements
- Resolve internal IT issues faster
- Reduce personnel cost (utilizing personal owned instead of corporate issued devices)

Rapid Integration – A Major Advantage

Getting started with IBM enterprise mobile:

Build mobile applications

Develop multi-channel mobile customer experiences for a variety of devices and create web-based mobile apps

Manage devices and applications

Manage applications and device policies on employee owned devices

Connect to and run backend systems

Efficiently connect mobile applications with enterprise application data

Help secure data, apps and devices

Offering security-rich network access and access to enterprise data and systems, building safe applications and a reliable mobile app platform

Transform existing capabilities

Increasing customer loyalty and workforce productivity with web content on their mobile devices

Extend to mobile

Engage people in your social business by extending social collaboration to wherever they work

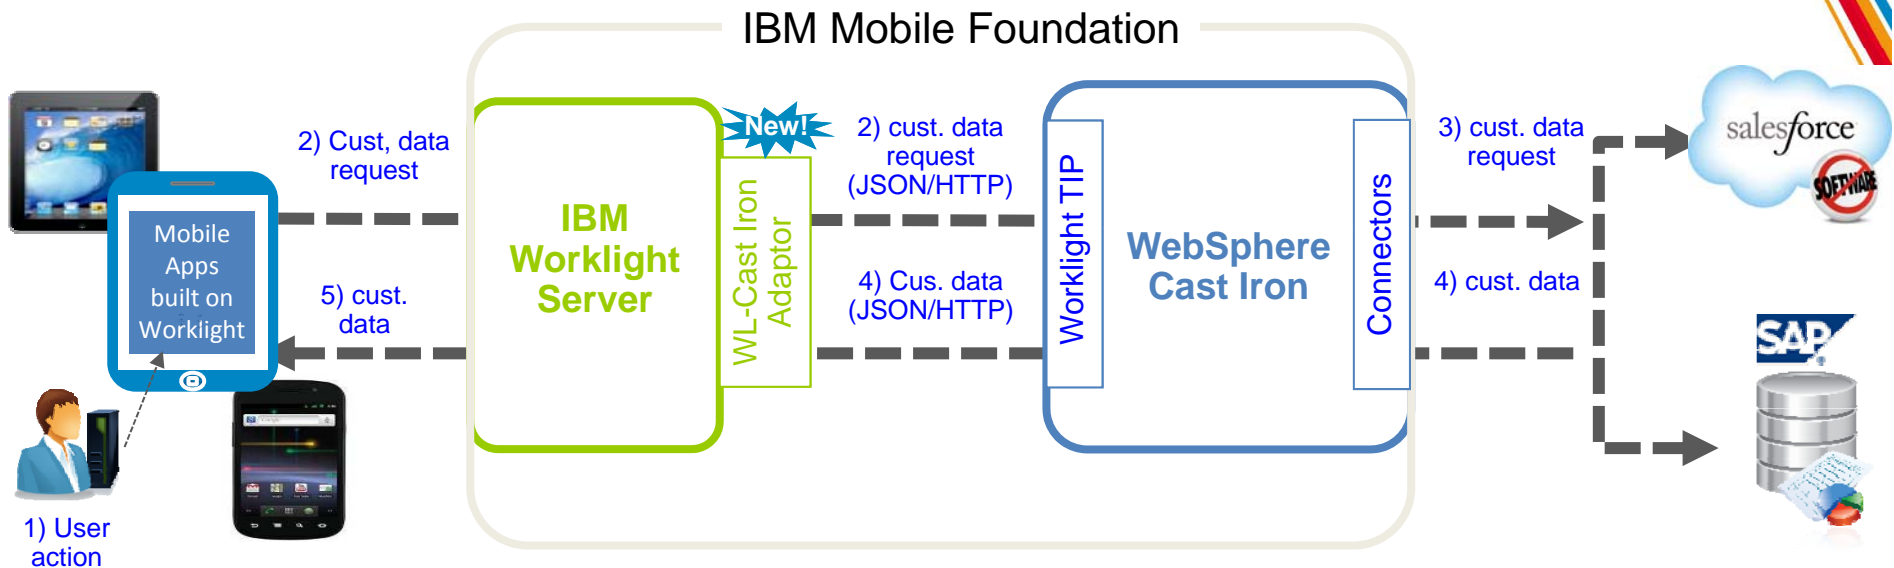

Cast Iron Connects Cloud and On Premise Applications in Days

How it Works - Example

Scenario: Worklight Application makes request for enterprise data

Request from Mobile app for customer data from SAP & salesforce

- 1) User invokes action on Mobile application to request data
- 2) Worklight Server invokes it's WL Cast Iron Adapter to send customer data request to Cast Iron
- 3) Cast Iron receives request & invokes connectivity with salesforce.com and SAP to extract customer data
- 4) Cast Iron sends customer to Worklight Server
- 5) Worklight Server delivers data to Mobile application on the device

Cast Iron Approach

No Coding

Beyond Configuration

Preconfigured Templates (TIPs)

Configuration-Wizard

Configuration

1. Introduction
2. Edit Login Information For SAP endpoint.
3. Verify SAP connectivity
4. Extract SAP Customer
5. Complete SAP Connectivity
6. Create Business Rules for data validation
7. Verify Salesforce.com connectivity
8. Map customer data

Cast Iron Solution Overview

Cast Iron Capabilities

Endpoints

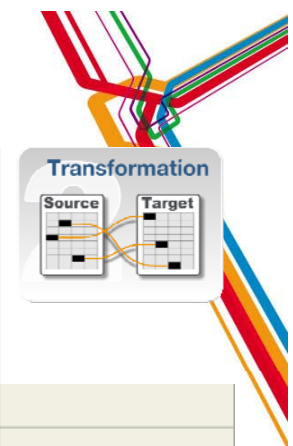

The screenshot displays the 'Cast Iron Studio - SF' interface with a configuration window for 'CRMODAccountWSInvoke'. The window is divided into several sections:

- Type:** Includes 'Invoke' and 'Location' (Remote) options.
- WSDL Name:** Set to 'OracleCRMAccount'.
- Service:** Set to 'Account'.
- Port:** Set to 'Default'.
- Location:** Set to 'OracleCRMODWebServiceURL'.
- Provide:** Includes 'Transport' (HTTP) and a URL field.
- Login:** Includes 'Log into the Server as an Anonymous User' and 'Log into the Server with User Name and Password' options.
- Security:** Includes 'Authentication' (Basic) and 'Realm' fields.
- Connection Pool Options:** Includes 'Maximum Connections' (25) and 'Connection Timeout' (300 seconds).
- Proxy:** Includes 'Connect via a Proxy Server' and 'Authentication' (Basic) options.

A 'Test Connection' button is highlighted with a blue circle in the bottom left of the configuration window. Another 'Test Connection' button is visible in the bottom right of the overall interface.

Pulse Comes to You 2012

Transformation ca

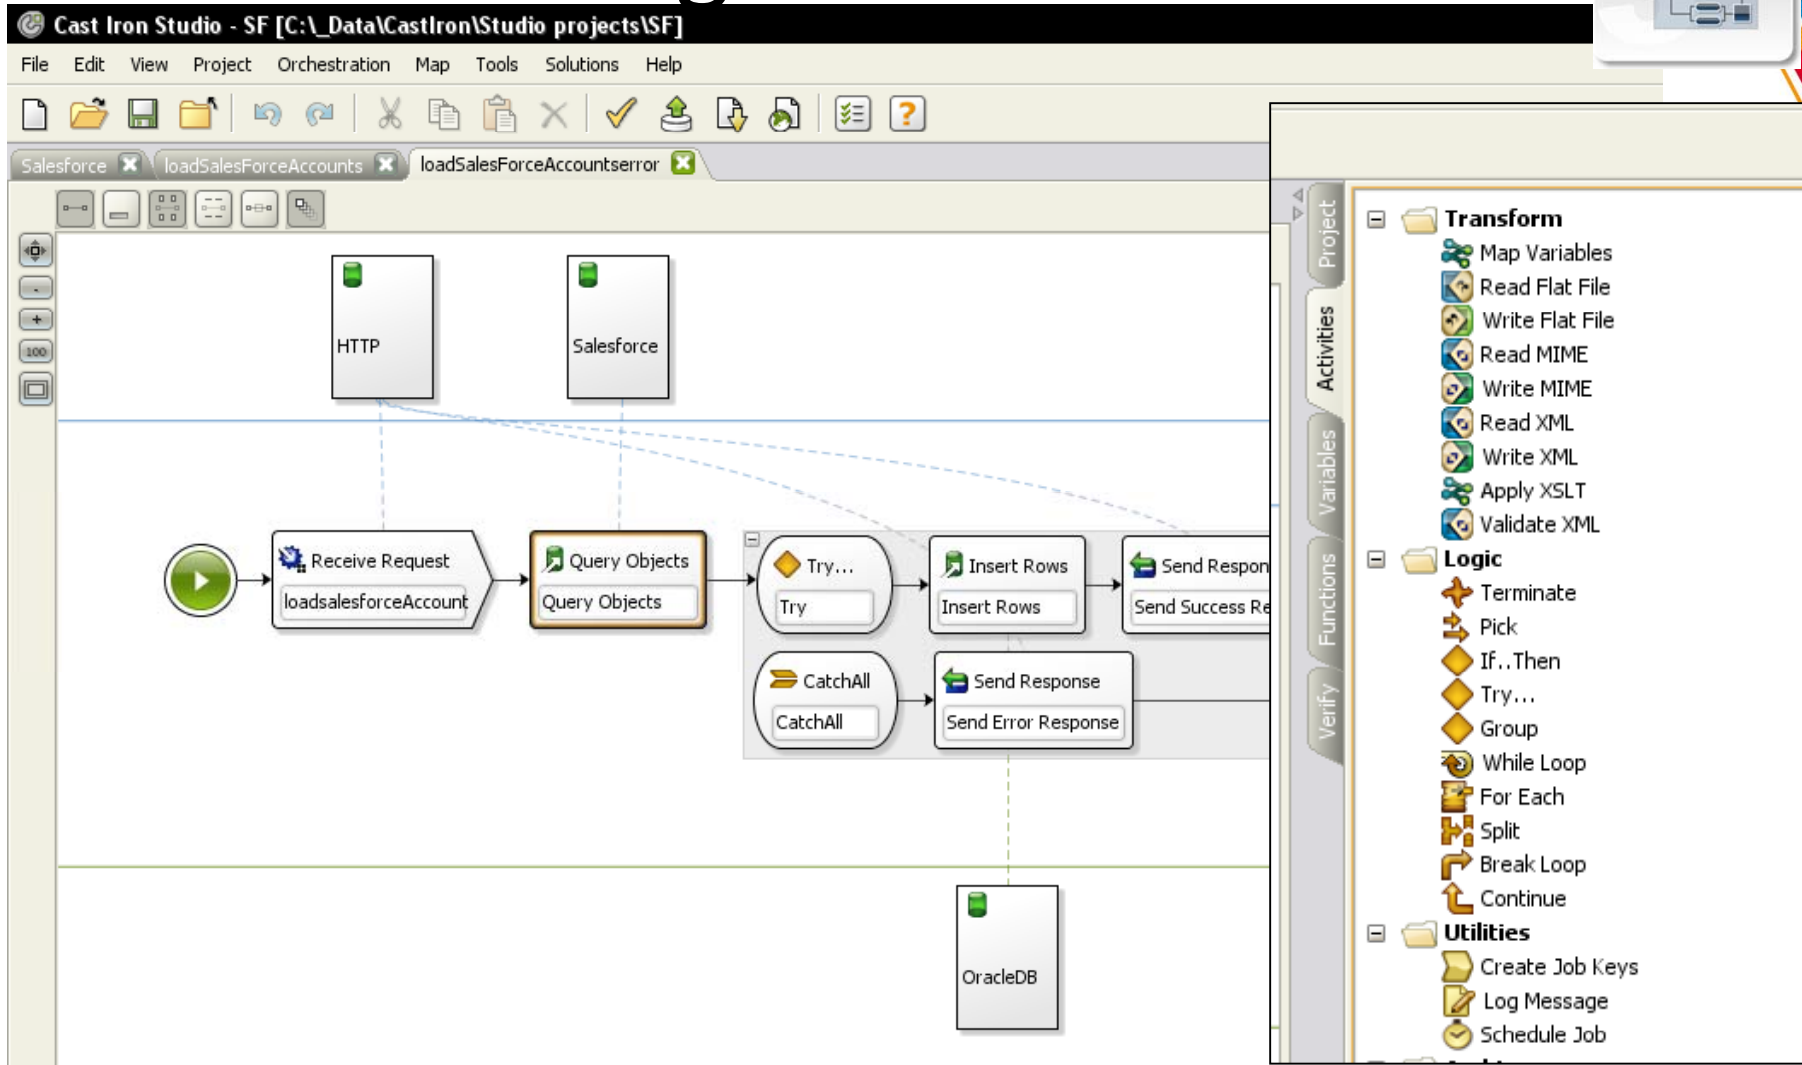

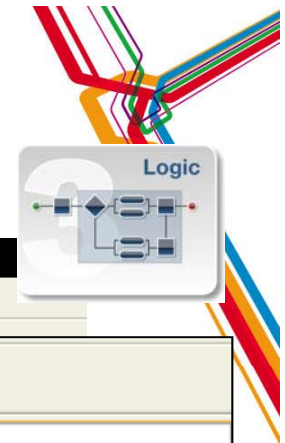

The screenshot displays the Salesforce.com 'Upsert Objects' interface. The main window is titled 'Salesforce.com Upsert Objects Upsert Product in SFDC'. On the left, a 'Checklist' shows steps: Summary, Pick Endpoint, Configure, Retry, Map Inputs, and Map Outputs. The 'Map Inputs' section is active, showing a tree view for 'EBS11ModifiedProducts' with fields like 'occurrence', 'ACTIVE', 'PRODUCT_CODE', 'DESCRIPTION', 'PRODUCT_FAMILY', and 'PRODUCT_NAME'. A 'Select Inputs...' button is visible. The right side features a 'Functions' panel with a list of operations categorized into String, Mathematical, and Miscellaneous. Below the functions is an 'objects' panel showing a tree view of object relationships, including 'Product2', 'occurrence', 'Name', 'exists', 'ProductCode', 'Description', 'IsActive', 'Family', 'exists', 'nil', 'internalID_c', and 'nil'. The interface is designed for mapping data from an external source to Salesforce objects.
