The Cost of Poor Performing Applications

Impacts customer satisfaction, revenue and productivity

Online Outage On Black Friday

(AP) High traffic disrupted Wal-Mart Stores Inc.'s Web site for much of Friday, one of the year's busiest shopping days.

The Walt Disney Co. also had problems handling the rush of online activity Friday, while Amazon.com Inc.'s site had brief disruptions a day earlier due to a Thanksgiving Day sale on Microsoft Corp.'s Xbox 360 video game machines.

.. issues with application performance are impacting corporate revenues by up to 9%.”

“Poor application performance translates to lost revenue, research shows”, Network World 08/06/2008

Computer Glitch Delays IRS Rebate Checks

Computer glitch dumps kids from state health insurance

By DEBORAH CIRCELLI
Staff writer

DAYTONA BEACH, Fla. — Computer errors in a state health insurance

“Nearly 60% of survey respondents reported the inability to identify issues before end users are impacted...”

“Poor application performance translates to lost revenue, research shows”, Network World 08/06/2008

InformationWeek

BestBuy.com Experiences Overnight Web Site Outage, According To Monitor Service

December 15, 2006, InformationWeek

BestBuy's Web site response times have been climbing as holiday shopping has become more popular in December, according to WebSitePulse.com.

By Charles Babcock
InformationWeek

“Organizations spend 54% of each outage detecting and identifying.”

System glitch hits HSBC customers

HSBC customers faced chaos in the UK on the New Year public holiday as the bank suffered a major breakdown in services.

A computer glitch meant customers were unable to get money from cash machines or use credit cards and Switch

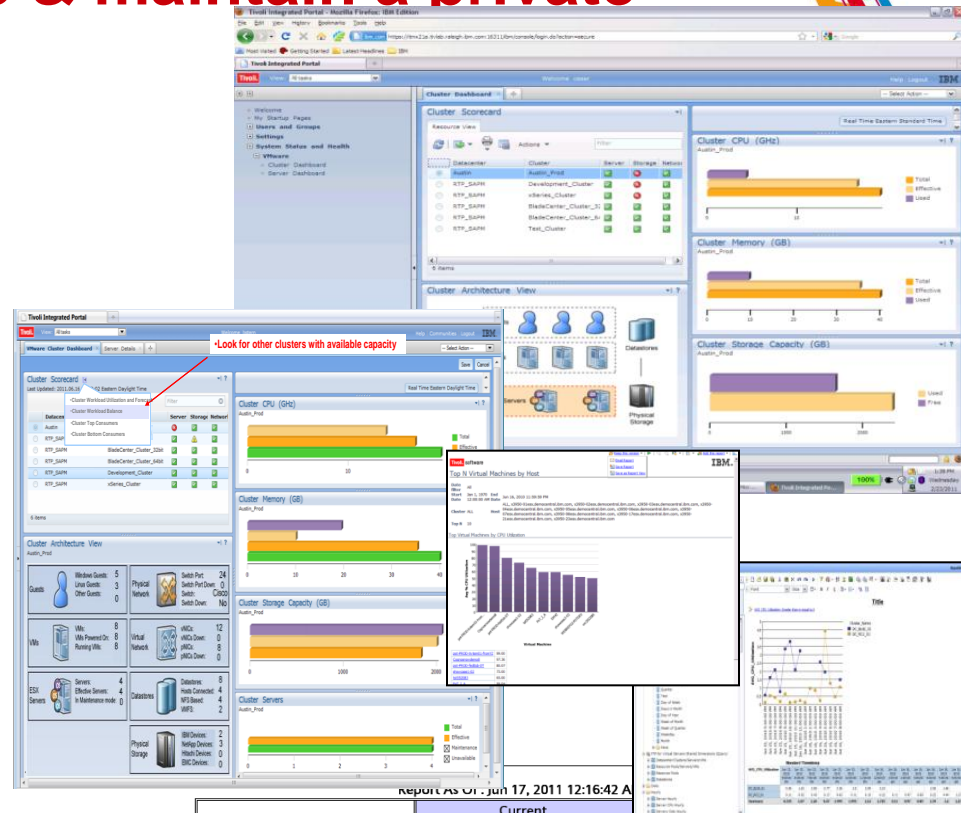

Bargain hunters may have been hit by HSBC's problems

...cess their personal accounts

...the glitch was the most serious in the bank's history, but most problems

Key capabilities to optimize & maintain a private cloud

- **Health dashboards** to provide an instant, consolidated glimpse into cloud health
- **Topology views** of the key interrelated components of the cloud
- **Reports** on the health trends of cloud components and workloads
- **What-If** capacity planning scenarios
- **Policy-Based** optimization to put workloads where they'll perform best, not just where they'll fit
- **Performance Analytics** for right-sizing of virtual machines
- **Integration** with other Service Management functions

Physical Servers	Current			
	4	3	4	3

PlanningCenter

 Any change in steps 1 to 4 needs a re-generation of the plan in step 5 to view the latest recommendation.

Step 1: Snapshot config data.

Load the latest configuration data for physical servers and virtual machines for analysis. You can change this data for what-if analysis.

Load Config

Step 2: Set analysis time period.

Set the time period for which the measurement data in the warehouse can be analyzed corresponding to the virtual machines loaded in **Step 1**. The measurement data is federated from the warehouse.

Set Time

Step 3: Scope the infrastructure for analysis.

Click **Define Scope** to go to an expert mode page where you can select the subset of physical servers that you want to be part of this analysis. Default scope includes all physical servers loaded in **Step 1**.

Advanced options:

While scoping you can also edit the current configuration on the [Edit Current Environment](#) page to add new attributes or clean the data for physical servers and virtual machines, if required.

Define Scope

Step 4: Analyze virtual machine characteristics

Analyze the warehouse data within the time limit set in **Step 2**, to compute the VM-level sizing estimates using default settings (average daily utilization).

Advanced options:

Experts can customize sizing on the [Edit Current Environment](#) page. While on this edit page, you can trigger several custom actions to characterize virtual machines based on measurement data.

Size VMs

[Current Environment Report](#)

Step 5: Generate optimization plan.

 Any change in steps 1 to 4 needs a re-generation of the plan in step 5 to view the latest recommendation.

Generate a recommended environment using default settings (minimize systems, over-write existing recommendations).

Advanced options:

Custom settings can be made on the [Edit Recommended Environment Settings](#) page where experts can select optimization strategies, such as applicable business and technical policies, optimization goals and so on.

Generate Plan

[Optimized Plan Report](#)

Plan for Growth Factors for CPU, Memory, etc.

Step 4: Size Virtual Machines

Size VMs

[Current Topology](#)

Analyze the warehouse data within the time limit set in **Step 2**, to compute the VM level sizing estimates using default settings (average daily utilization).

Advanced options:

Experts can go do custom sizing in [Current Environment > Edit](#) page. While on this edit page, several custom actions can be triggered to characterize virtual machines based on measurement data.

•1. Auto-sized VMs

•2. Advanced option:

•Get into expert mode to create custom usage profile of VMs

•3. Apply growth profile

Edit Recommended Reservation Size

Absolute Value Growth

CPU Demand: %

Memory Demand: %

Rules for Optimization

Step 5: Generate Optimization Plan

Generate Plan

[Recommendation Topology](#)

[Recommendation Report](#)

Generate a recommended environment using default settings.

Advanced options:

Custom settings can be made in [Recommended Environment > Edit Settings](#) page where experts can select optimization strategies, such as applicable business and technical policies, optimization goal etc.

Any change in steps 1 to 3 needs a re-generation of the plan in step 4 to view the latest recommendation.

Recommendation Generation

Step 1: Select rules to apply in optimization

▼ Colocation/Anti-colocation

Active	Rule Instances
<input type="checkbox"/>	▶ Do not collocate VMs with DB2 and WAS
<input type="checkbox"/>	▶ Separate High and Low Critical VMs

▼ Boundary

Active	Rule Instances
<input type="checkbox"/>	▶ Create a Boundary for Critical VMs
<input type="checkbox"/>	▶ Create a Boundary for Win2003 32-bit VMs

▼ Utilization

Active	Rule Instances
<input type="checkbox"/>	▶ Provide 50% more CPU for Critical VMs
<input type="checkbox"/>	▶ Use 20% for growth on MQ servers

Step 2: Select optimization goal

Minimize systems
 Balance server utilization

Step 3: Select options

Keep existing recommendations
 Ignore existing recommendations

- Choose rules
- for what-if scenario

Click opens settings page in new tab – enables edits on optimization strategies. Will also link to a Rule Editor.

- Out of the box rules
- Create custom rules
 - Colocation/Anti-colocation
 - Boundary Rules
 - Utilization Rules

IBM SmartCloud Monitoring: Optimize your infrastructure performance and maximize ROI

- **Provides greater visibility resource health**
 - Track service levels & performance, and predict problems before clients are impacted
 - Understand performance and capacity today, and know what it will look like months from now
- **Lowers total cost of operations**
 - Optimize workload placement to wring maximum capacity and performance out of your investment
 - Freedom from expensive hypervisor or OS lock-in with a heterogeneous infrastructure monitoring solution
- **Optimizes performance**
 - Built-in performance analytics for right-sizing of virtual machines and resource optimization
 - Real-time proactive & predictive alerts help identify and fix problems quickly

The Business Challenge

When there's a problem, the business needs to know which customers, users, and businesses are being impacted.

IBM SmartCloud Application Performance Management

A single solution that intelligently manages Performance, Availability, and Capacity for complex application infrastructures in cloud and hybrid environment.

- Comprehensive solution that offers the right visibility, control and automation for critical applications
- Modular design to get started quickly and add capabilities as they are needed.
- Analytics to improve capacity utilization and optimize performance
- Common reporting tool, based on Cognos, makes reporting simple and easy to customize
- Delivers breadth of domain coverage in combination with a single trusted source of information for more accurate and faster problem diagnostics
- Entry edition available for mid market clients
