Optimizing the World's Infrastructure

The Dreaded Natural Disaster

Nearly every day, a disaster strikes somewhere in the world

Businesses are affected – data is lost, operations are disrupted

How fast can you be back up and running?

TODAY!

- *Tornadoes ripped through parts of the U.S. Southern Plains on Monday in an outbreak of violent weather that killed five people and injured dozens of others as cars went flying off highways, mobile homes flipped over and baseball-size hail came crashing through windshields.*

Business Continuity Depends on Data Recovery

- Businesses of all types are facing unprecedented challenges to keep more information available, all the time
 - They can't afford to lose any data, and they can't afford to be without it for very long
 - Losing access to data causes downtime – there's no longer a paper-based fall-back process
- The costs of downtime and lost data are escalating:
 - Lost revenue streams and customer confidence
 - Embarrassment in the marketplace
 - Contract penalties, regulatory fines, legal action, etc.

What can go wrong?

- Deleted files
- Corrupted database
- Virus/hacker attack
- Disk crash
- Server crash
- Local disaster
- Regional disaster

Can you quickly recovery from each?

Challenges with Data Recovery

- Meeting service level objectives and providing continuous availability of valuable files
 - Including email and mission critical application data
- **Waiting for data be restored**
 - **Long recovery time objectives; it can take hours or days to restore a large system**
- Trying to restore data that wasn't backed-up
 - Insufficient recovery point objectives; once-a-night backup = 24 hrs of data at risk
- Shortage of skilled data administrators to manage the influx of disparate data
 - What about data in remote/branch offices?
- Shrinking backup windows

The impact to a business can be enormous.

- Downtime ranges from **300–1,200 hours per year**, depending on industry
- In some industries, downtime costs can equal **up to 16 percent of revenue**
- For **32 percent** of organizations, just four hours of downtime could be severely damaging
- **30 percent** of all businesses that have a major fire go out of business within a year. 70 percent fail within five years.
- **60 percent** of companies that lose their data will shut down **within 6 months** of the disaster.
- **50 percent** of businesses that found themselves without data management for **10 days or more** due to a disaster filed for bankruptcy immediately.

IBM Tivoli Storage Manager FastBack Will...

- Help you instantly recover from almost any data loss incident
- Get control of your distributed data protection problem
- Improve the availability of critical application servers in your data center
- Help you reduce infrastructure and management costs, improve service levels and mitigate risks
- Compliment your TSM installation

Question: How much will it cost you while your data is being restored?

Fastback – It is all about Recovery Time!!!

Challenges

- **Mission Critical Windows Application is down**
- **Shrinking backup windows**
- **Shrinking acceptable data loss and RTO**
- **More granular RPO**
- **Lack of IT skills in small business and ROBO**

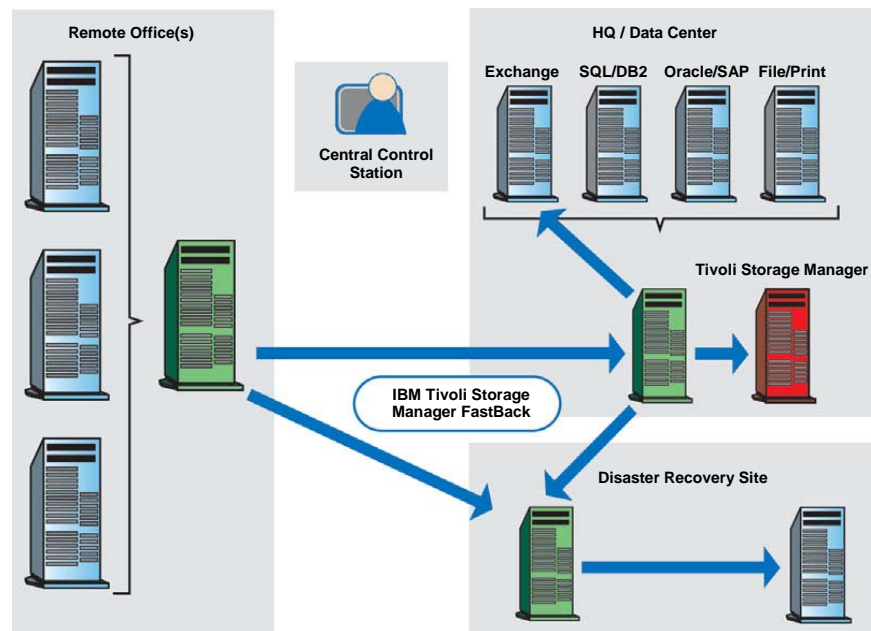

FastBack Addresses these Challenges

- **Near zero recovery time**
- **Elimination of backup windows**
- **Reduce back-up data with block level incremental forever**
- **CDP on-demand™, Customizable RPO by application**
- **Centralized management of decentralized data, with secure data transfer**
- **Easy to install and use; one-click restore**

Introducing Tivoli Storage Manager FastBack v6.1

- Block-level, incremental-forever, continuous or scheduled backup for Windows and **Linux servers** 
- Near-instant restore of any type / amount of Windows application data
- Integrated target-side **data deduplication** 
- Built-in 'selective replication'
- Comprehensive reporting, leverages Tivoli Common Reporting
- **Tight integration with Tivoli Storage Manager** 

TSM FastBack for Microsoft Exchange v6.1

- Granular restore of individual MS-Exchange objects:
> Messages, Attachments, Calendar entries, Contacts, Notes, Tasks, Journal entries
- **Supports Shared Folders** 
- Supports Exchange 2003 & 2007
- TSM FastBack v6.1 provides volume-level recovery of Exchange 2010 today

TSM FastBack – *It's All About Recovery*

- **FastBack Mount**

- Opens an Explorer-like view into the FastBack repository
- Simple 'drag-and-drop' operation
- Recovers individual files and folders, from any point in time

- **Virtual Recovery**

- Mounts an entire volume to be recovered
- Select any previous point-in-time (Recovery Point)
- New volume becomes available within seconds
- Read-write requests serviced by FastBack
- Data is restored in the background to target disk

- **Bare Machine Recovery / Disaster Recover**

- Restore the Operating System volume
- Any hardware platform (similar, dissimilar, virtual machine)

Case Studies & References

1. [IBM - The Austin Diagnostic Clinic recovers critical data in less than an hour with...](#)
Using IBM Tivoli Storage Manager FastBack, ADC can easily protect and quickly recover critical data from its core applications, including its electronic medical records system. A two-hour backup now takes five minutes and staff can restore critical

Examples of Using TSM FastBack

- **Instant Restore of Applications and Fileservers**
 - Make systems immediately available to end users without waiting for the physical data restore to complete
- **Virtual environments**
 - Full block-level backup for each guest, without the overhead
- **Item-level recovery for Microsoft Exchange**
 - Calendars, folders, attachments, mailboxes, or use with TSM for Mail
- **Microsoft SQL, Oracle or DB2**
 - Faster backups with more granular recovery options
- **Large Microsoft Windows Filesystems**
 - Provides faster backup and file-level recovery for very large filesystems
- **Linux**
- **Disaster Recovery**

Summary: Why FastBack?

- It can save your company massive amounts of money!
- Near instant recovery
- Insurance against downtime
- Minimize data loss
- Simplify data protection and recovery
- Compliments existing TSM environments

Q: What is Comprehensive Data Protection Solution (CDPS) Express? A: First Strategic MidMarket “Solution Building Block”

Cross Brand Soft Bundle

Server, Storage and Software

All in one attractive package for only \$9,899!

- ▶ Tivoli Storage Manager FastBack Software
- ▶ System x Servers
- ▶ DS3200 Storage
- ▶ Optional: IGF Monthly Financing
IGS Install Services

Key CDPS Initiatives

- Messaging and Marketing Assets at the solution level
- Partner education at both solution and component level
- Fastback Software included in HVEC and XCC Ordering Systems
- Geo Sponsored Promotion on Simple Config. (Local Geo Brand Leader key to making this happen)

Delivered through our Channel Partners

- ▶ Tivoli Partners
- ▶ System x & Storage Resellers

OI from:

- ▶ Co-Marketing
- ▶ Partner led

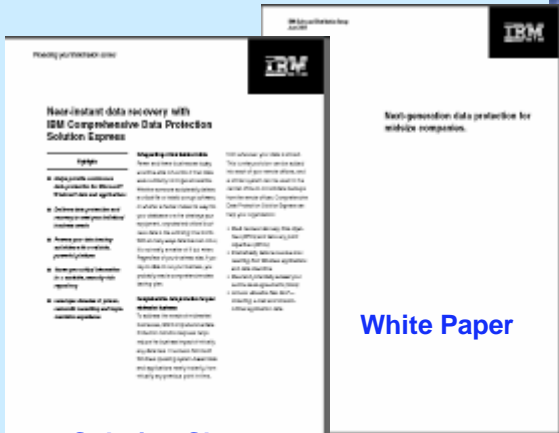

Pre Identified Cross & Up Sell

1. Tivoli Storage Manager (Tape Archive)
2. Tivoli Continuous Data Protection for Files software for clients that have mobile employees (i.e., sales teams or support teams)
3. IBM Information Protection Services – *remote data protection* for clients that want a reliable, hosted third-party alternative for their data backup needs.
4. IBM System Storage DS3200, DS3300, DS3400 and DS4000 for clients that need more storage capacity.

Several CDPS Solution Level assets have been created and are available for translation
