IBM®

Gain quick System z ROI with product discovery and usage tracking with Tivoli Asset Management

Teleconference – October 11, 2012

Highlights

Topics include:
- *Automatically creating and updating a complete system inventory via high-speed scanning and in-house application tagging*
- *Identifying where applications and tools are installed and used by factors such as region, machine, LPAR, storage volumes and related datasets*
- *Generating interactive reports that use hyperlinks for drilling down into specific details*

Speaker: *Alfonso Parra*, Product Manager, Tivoli IT Asset Management Portfolio, IBM Software Group
Broadcast date: October 11, 2012, 11 a.m., EST / 4:00 p.m. BST / 3:00 p.m. UTC
Developed for: IT and enterprise architects and managers; system analysts; operations managers, system administrators, IT finance and auditors, and, IT procurement and controls
Technical level: Intermediate

Can you quickly identify software inventory and application usage in your IT environment? Do you need to increase ROI in IT with reduced costs, while minimizing compliance risk?

IBM® Tivoli® Asset Discovery for z/OS® can provide discovery, monitoring and reporting to help you understand z/OS product and application usage. It enables you to:

- Automatically discover and identify IBM and third-party software running on z/OS
- Monitor software usage and related growth to proactively plan for future capacity needs
- Lower costs by removing unused and obsolete software

Teleconference

Join us for this complimentary teleconference as we discuss how Tivoli Asset Discovery can manage the full-life cycle of hardware and software assets on z/OS and provide real ROI quickly and on an on-going basis. It helps organizations track software location and usage in a granular manner. For example, you can monitor software usage by job name, department and individuals, and also measure usage growth month by month. You'll come away with a clearer view of the actual cost of products and applications shared by users and business processes across your enterprise — without adding a lot of overhead.
