# The IBM Mobile App Development Lifecycle

# Why do you need **Mobile-specific** App Development tools?

## Mobile Apps are different.

- **They run on unstable networks**—interruption is the norm, not the exception
- **They are context-aware** – sensor richness provide invaluable context
- **Always on** – An opportunity to deliver greater value since always within arms' reach
- **Greater urgency** – immediacy of engagement
- **Smaller footprint** – More challenging to make compelling and easy to use

## Management is different.

- Smaller screens pulling content from more sources: **need to choreograph** content from multiple repositories and applications , both on premises and in the cloud
- Greater challenges of application **governance, distribution, and version management**
- **AppStore Terms of Service** present challenges for managing B2C apps

## Development is different.

- **Extremely short development cycles**
- **More devices** to support, each with its own set of capabilities, OS and UI behaviors
- **More development approaches** to choose from – Web, HTML, Native or a mix
- More **third-party and open-source tools, frameworks and libraries** to choose from

## Security is different.

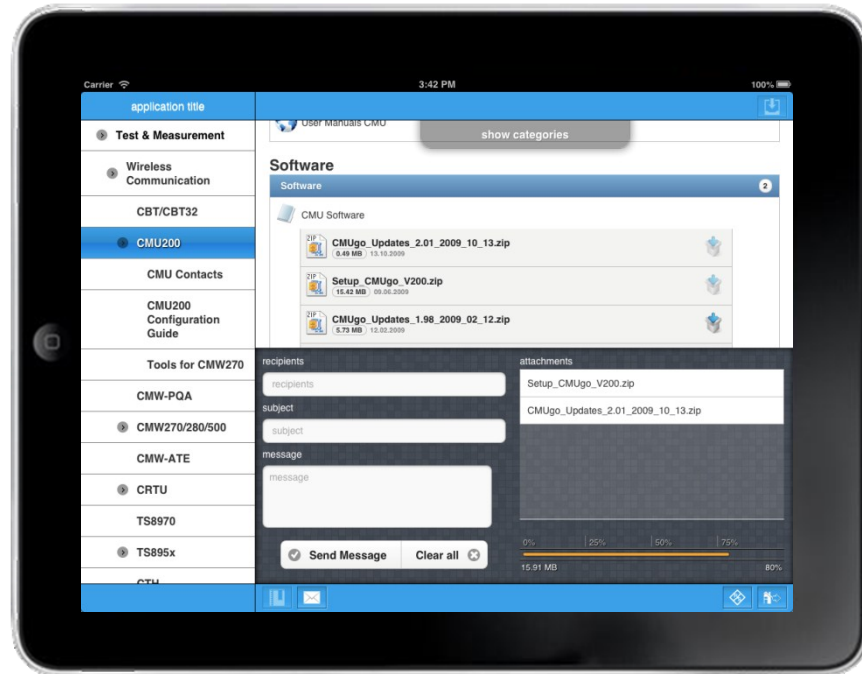

- **Greater risks** of exposing applications and data on small, light and always on portable devices
- **Greater authentication challenges** associated with content mashups
- **AppStore Terms of Service** can limit security options

# Deliver Cross-platform Apps in Weeks – Rohde & Schwarz

Product Catalog and Order Tablet Application for Sales Personnel

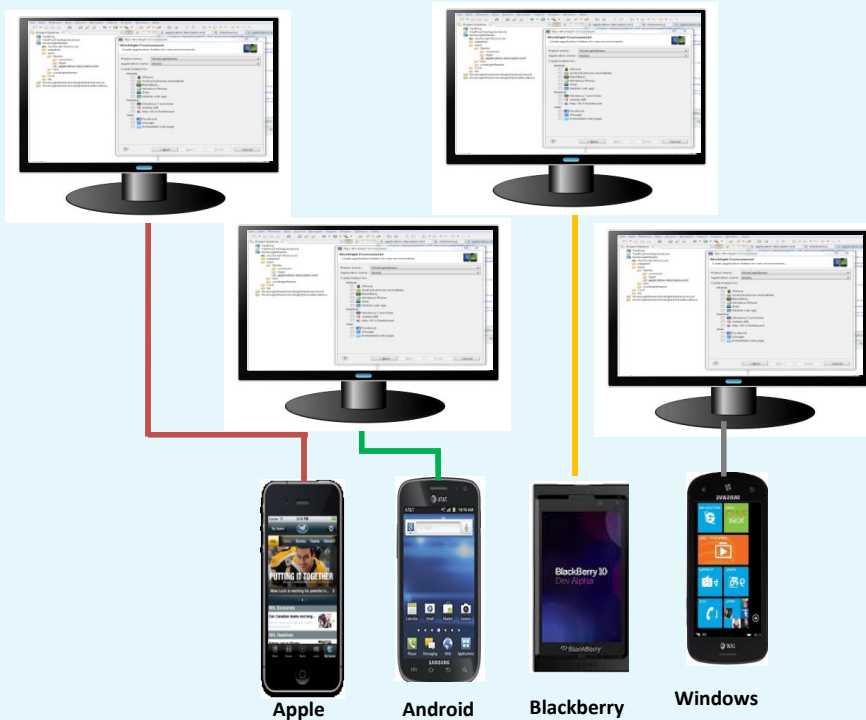

- **60% development cost saved** by using Worklight across 5 platforms
- 1st app built by 1 Developer in 12 Weeks, including customized authentication, MDM integration, SAP connectivity, offline access, mobile-triggered server emailing, JQuery UI library, Cordova plug-in

# Multi-platform development with a shared codebase

## From the complexity of many...

- Multiple sets of tools & frameworks
- Four codebases to develop and maintain

## To the simplicity of one

- One development environment
- One codebase to develop and maintain

# Support Multiple Mobile App Development Models

B2C  
B2E  
B2B

## Browser Access

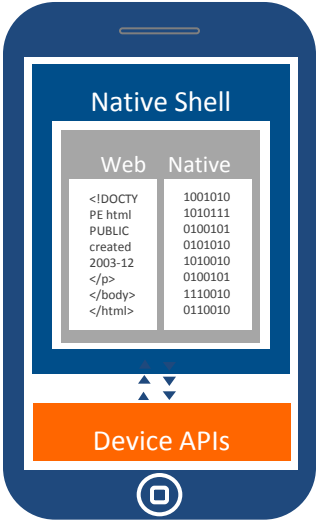

Written in HTML5 JavaScript and CSS3. Quick and cheap to develop, but less powerful than native.

Browser Access

## Hybrid Apps – Web

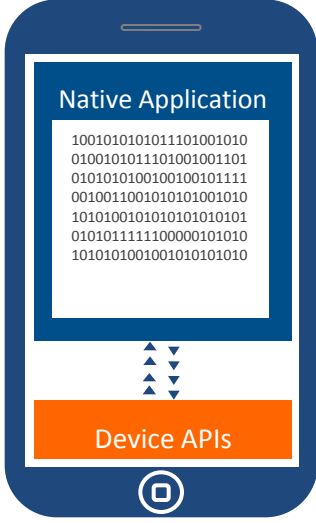

HTML5 code and Worklight runtime libraries packaged within the app and executed in a native shell.

Downloadable

## Native Apps

Platform-specific. Requires unique expertise, pricy and long to develop. Can deliver higher user experience.

Downloadable

# Demo

Building a Worklight application -  
<http://www.youtube.com/watch?v=snkUTBVxLBw>

**Innovate2013**  
The IBM Technical Summit

# The IBM Mobile App Development Lifecycle

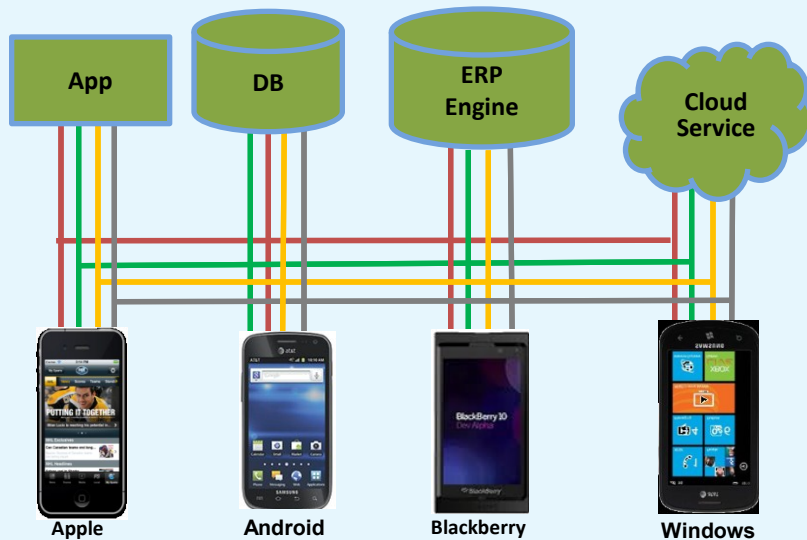

# Controlled back-end integration

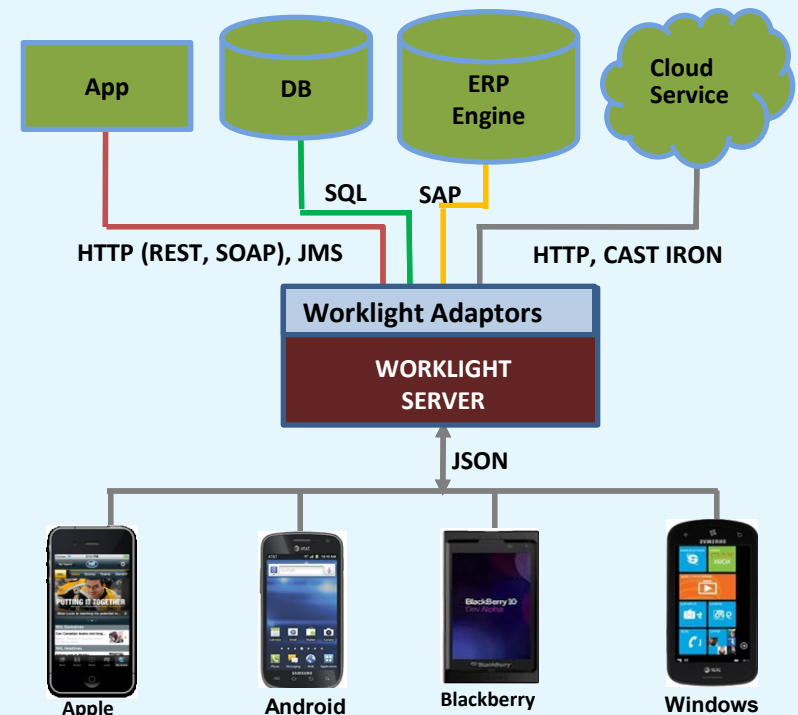

## From multiple point-to-point integrations

- Multiple sets of integrations to enterprise resources to build and maintain
- YOU manage caching, synchronization and end-to-end encryption

## To streamlined, transparent access

- Worklight transforms enterprise data into mobile-friendly, JSON format
- Worklight Server manages caching, data synchronization and end-to-end encryption

# Centralized push notifications

From the complexity of many...

Multiple sets of push services to manage

To the simplicity of one...

Unified push management

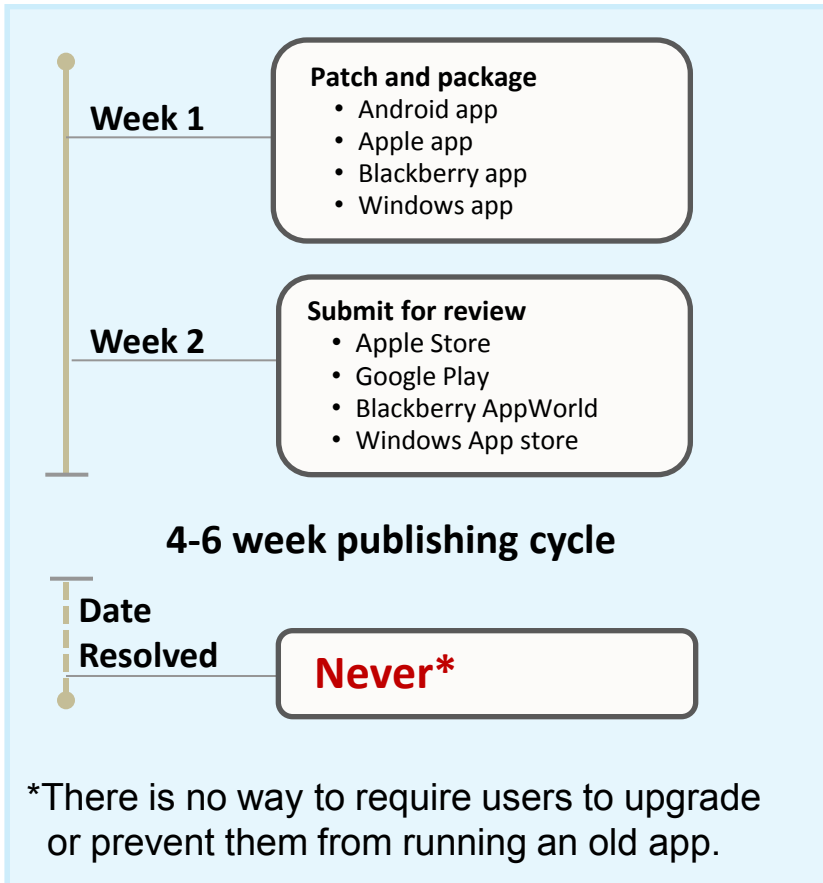

# The IBM Mobile App Development Lifecycle

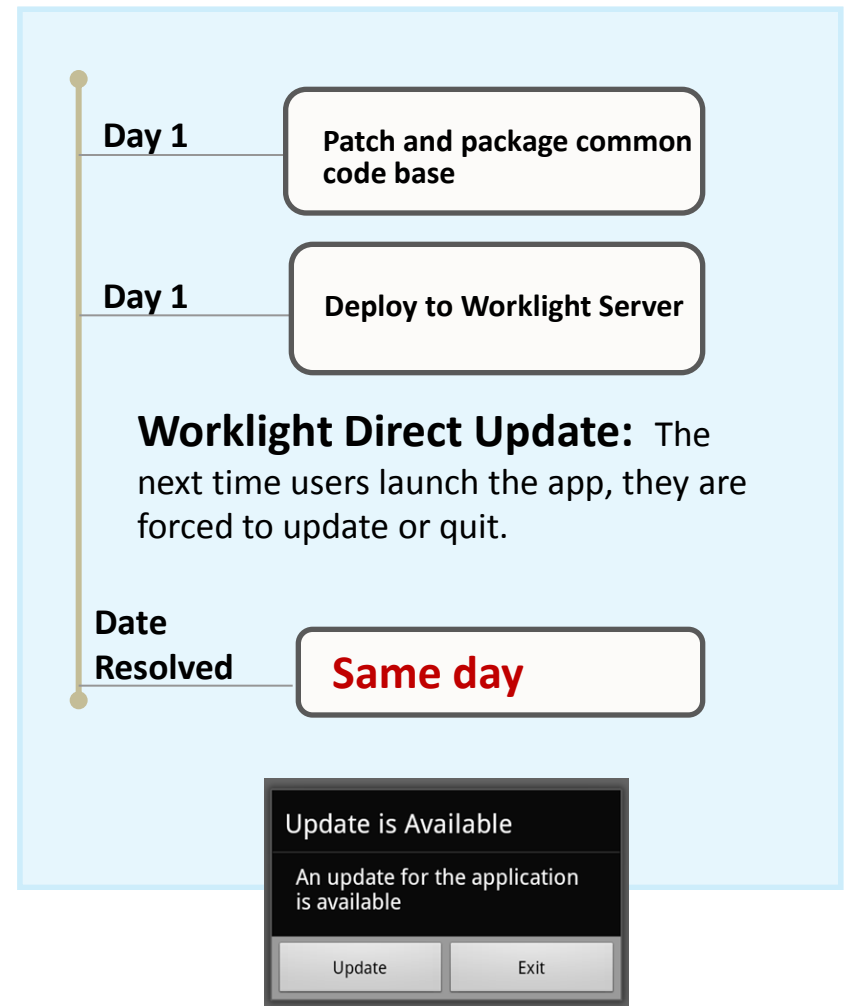

# Rapid App Updates

## Without Worklight

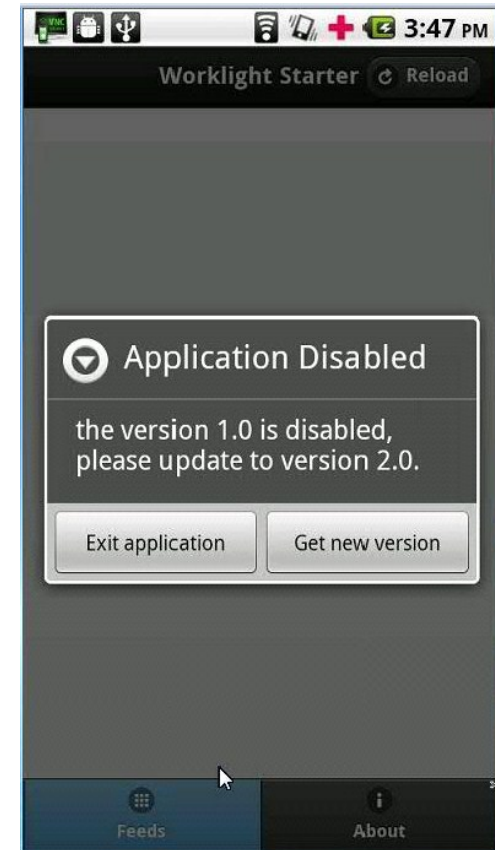

## With Worklight

# App Disable

**Remote Disable:** you can use the Worklight Console to deny access to an app of a specific version

The screenshot shows the Worklight Console interface for configuring an application. The top row shows 'Version 2.0' with a green dot and 'Active' status, and a 'Lock this version' checkbox. The bottom row shows 'Version 1.0' with a red dot and 'Disabled' status. A yellow highlight is around the 'Version 1.0' configuration, including a text area for 'Notification text (will appear on the device):' containing the message 'the version 1.0 is disabled, please update to version 2.0.', and a 'URL of the latest application version' field. The 'App Authentication' is set to 'Disabled' for both versions. The bottom of the console shows other platform configurations: BlackBerry 6 and 7 (Version 1.0, Active), Windows Phone 7 (Version 1.0, Active), and Windows 8 (Version 1.0).

# The IBM Mobile App Development Lifecycle

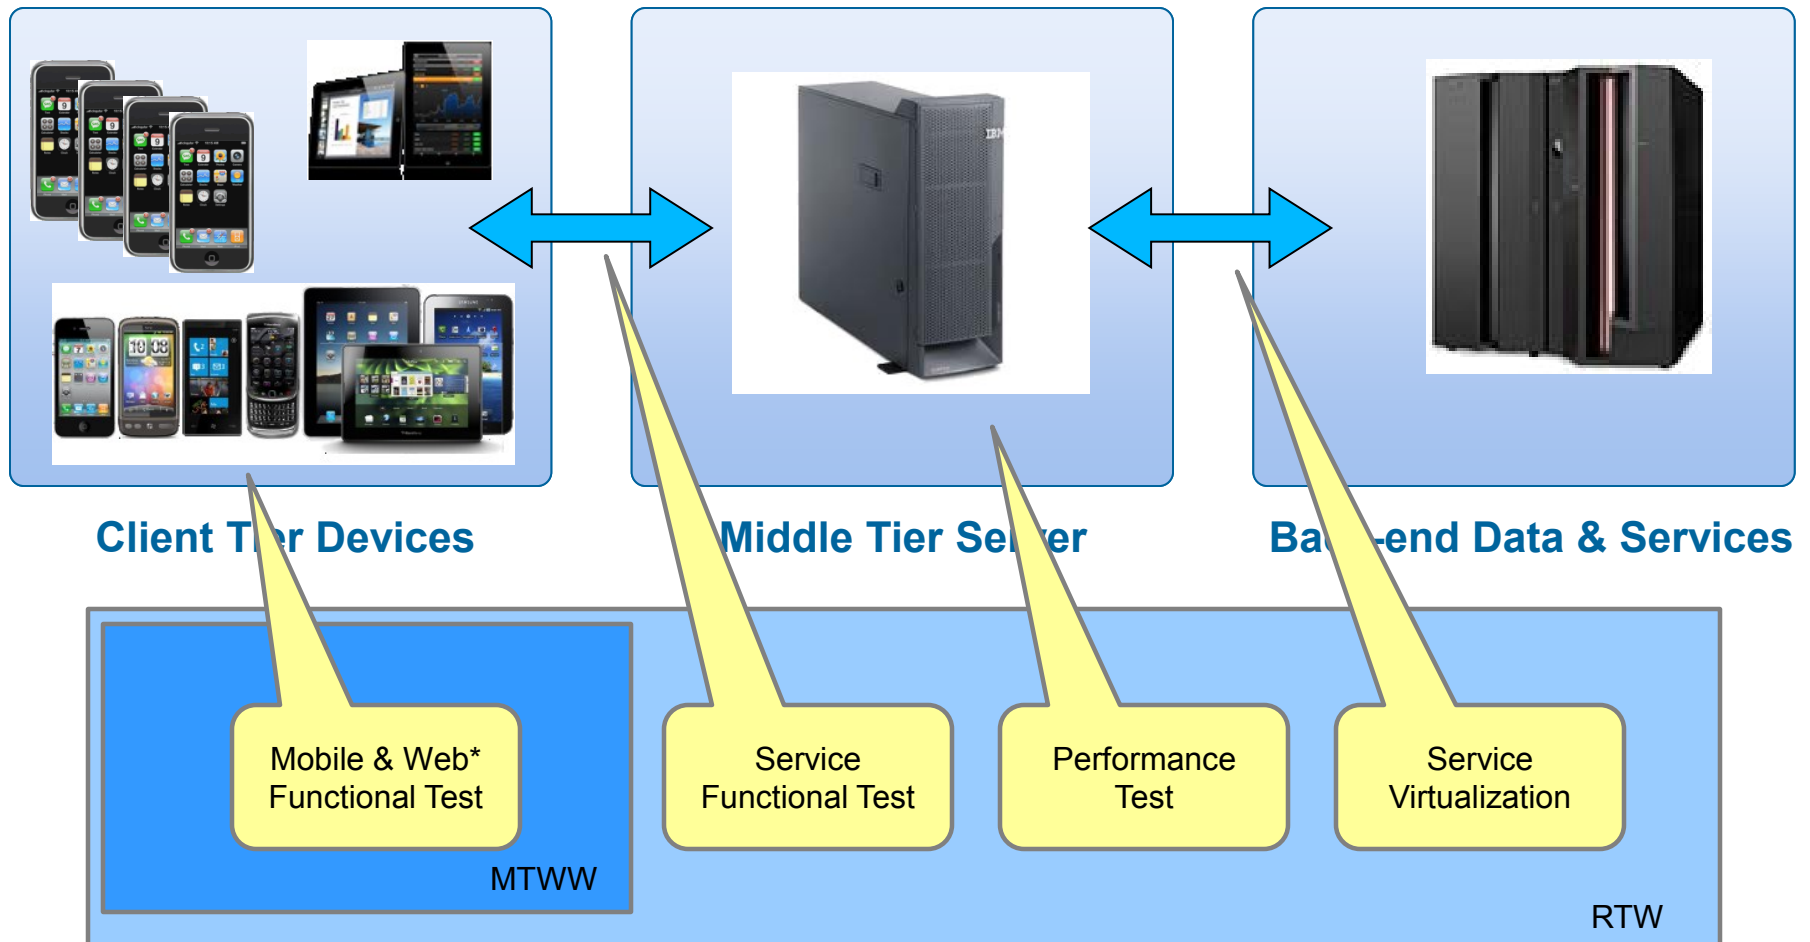

*85% of adults who have completed a mobile transaction last year expect the experience to be better than using a laptop or desktop computer.*

# Testing the end-to-end mobile solution

***Testing involves much more than just the mobile front-end  
Rational Test Workbench offers a complete solution***

# Testing the end-to-end mobile solution (cont)

# Automated Mobile Functional Testing

Delivering support for native, web, and hybrid applications on Android and iOS

- Supported Mobile Operating Systems
  - Android 2.2+
  - IOS 6+
  - Android & iOS hybrid apps
    - HTML5/CSS3
    - JQuery Mobile
- Capture (record) a test from a physical device or mobile emulator
- Structured test definition language (ClearScript) simplifies authoring and supports multi-language
- Shares multi-channel, Keyword, and execution capabilities within the Rational Test Workbench & Rational Quality Manager
- Shell-share provides seamless transition from Worklight to RTW

The screenshot displays the IBM Blue Pages mobile application interface. At the top, there's a status bar with the time 10:37 and 77% battery. Below it, the 'App Details' screen shows options for 'Original', 'Record', 'Test', and 'Clear'. The main content area displays 'IBM Blue Pages' with 'Version: 1.0' and 'Chargement sur Dropbox'. A list of tests is visible, including 'Test2' with location '/FVT'. A 'Test Test2' dialog box is open, showing 'Run Test' and 'Reports' buttons. Below the dialog, a table provides details for 'Test2' (last modified 14:59) and lists the application as 'IBM Blue P. 1.0; created on 18/0; imported on 25/03/1'. A test script table is also visible:

1	Start <b>IBM Blue Pages</b>
2	Enter text ' <b>Dennis</b> ' in <b>Edit text</b>
3	Click on <b>Image button</b> to the right of <b>Edit text</b>
4	Click item at position <b>2</b> in <b>List view</b>

# Reducing Cost for Cross-platform Development

## Multiple Apps for Employees

- First Beta in less than a month
- Multi-geo user base
- Extended to notebook users

## Rapid Demo App Development

- Access to CRM, SAP ERP, Lotus Notes
- Showcases for business
- Training for developers

## A Set of Standardized Components

- Document access and viewer
- Authentication
- Data access interface (adapter)
- Customized mobile design palette

## Mobile ROI – 60% Overall Cost Savings

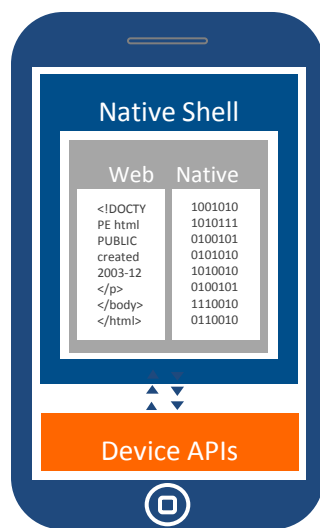

- 30% savings in app development
- 80% savings in interfacing with backend systems
- 90% savings in content maintenance
- 50% savings in technical maintenance

# Support Multiple Mobile App Development Models

## Hybrid Apps – Web

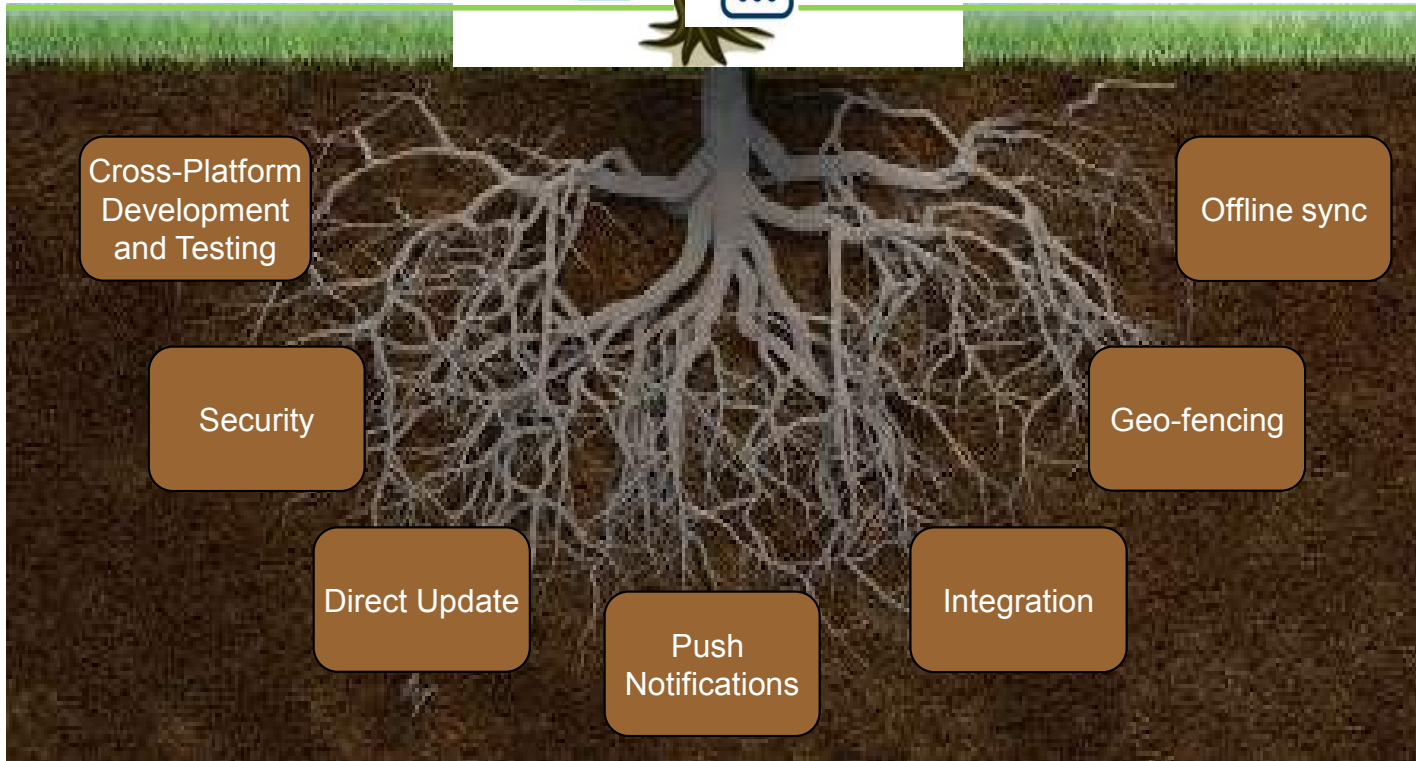

HTML5 code and Worklight runtime libraries packaged within the app and executed in a native shell.

Downloadable

- Rich user interface using HTML5 technologies
- Integration with native device capabilities provided from JavaScript using Apache Cordova; camera, GPS, contacts, etc
  - Fully extensible
  - Can mix and match native code where desired
- Platform capabilities provide:
  - Backend integration
  - Security
  - Operational analytics
  - Native database with synchronisation
  - Geo-aware APIs
  - Support the latest mobile OS
