IBM®

Delivering real cost savings through utilities management

Teleconference – July 16, 2013

Highlights

Topics

- Using enhancements to minimize downtime associated with routine DB2 data maintenance
- Responding to changing application needs, such as data warehousing or business analytics
- Reducing elapsed time and CPU during utility processing
- Support for complex data types such as XML or Large Objects (LOBs)

Speaker:

Craig Friske, Lead Developer, DB2 Utilities, IBM Software Group

Broadcast date: July 16, 2013, 11:00 a.m. EDT / 3:00 p.m. GMT / UTC

Developed for: Database administrators and managers; system programmers; operations managers

Technical level: Intermediate

The IBM® DB2® Utilities Suite is at the core of successfully managing any DB2 for z/OS® database. With a commitment to day-one support of every DB2 for z/OS version, the Utilities Suite eliminates the need for utilities from third-party vendors. Many significant new enhancements are available with the latest product enhancements that can relieve the burden of maintaining DB2 data.

Teleconference

Join us for this complimentary teleconference and learn more about DB2 Utilities Suite enhancements recently delivered via the maintenance stream to reduce CPU and improve availability. You'll learn about new features that enable you to avoid running the utility altogether. During this session, we will also take a look at DB2 10 enhancements that can help you get the most from your IBM DB2 Utilities investment.
