

Save hardware and software costs by implementing cloud on System z

Teleconference – March 21, 2013

Highlights

Topics

- Using a common control center for managing business processes for digital and physical assets
- Optimizing virtualized workloads and managing the cloud infrastructure
- Tracking, managing and allocating IT resource usage accurately
- Accessing management through mobile devices and integration with development tools

Speaker:

Mike Baskey, IBM Distinguished Engineer, Tivoli® System z Cloud Architect, IBM Software Group

Broadcast date: March 21, 2013,
11 a.m. EDT / 3:00 p.m. GMT / UTC

Developed for: IT and enterprise architects and managers; system analysts; system programmers; operations managers

Technical level: Intermediate

Are you implementing cloud in your organization today? Have you considered taking advantage of the value provided by IBM® System z® to run cloud workloads? Using a cross-platform environment based on an integrated set of technologies can help you build and rapidly scale private cloud environments – and optimize cloud workloads.

Teleconference

In this complimentary teleconference, we'll discuss how optimizing workloads onto System z and zEnterprise® can save both hardware and software costs. We'll show you how you can look across virtual servers – System z, System p® and System x® – and associated workload performance goals, to better manage your cloud workloads and resources.

We'll also discuss how the IBM SmartCloud® Foundation allows fit-for-purpose capability to optimize workloads onto the best platform. Learn about the components of the SmartCloud Foundation, including SmartCloud Provisioning, SmartCloud Cost Management and SmartCloud Control Desk, and how they simplify cloud management across all platforms. You'll come away with a good understanding of how using System z can increase cloud flexibility and agility, while saving time and optimizing workloads.
